- Zoological*—53; Report, 523; 557, 622, 708, 792, 846, 1309, 1341, 1404, 1469
- BRITISH ASSOCIATION—General Committee, Treasurer's Account, General Meeting, President's Address, 1058. Dr. Carpenter on Characters of Species—Col. Rawlinson on Cuneiform Inscriptions—Election of Officers, 1019; Report of New Committee, 1161. Committee of Recommendations, 1163. Gossip, 706, 876, 1092
- Sec. A.—*Mathematical and Physical Science*—Powell on Luminous Meteors, 190. Joly's Experiments with Electro Magnet—Robinson on same subject—Thomson on Ferriatic Induction of Electric Currents—Whitehouse on Electric Cable, 1091. Nichol on Chronology of Formations of Moon [see also 1370]—Stokes on Achromatism of Double Object-Glass, 192. Thomson on Motions on Surfaces of Wine, &c.—Brewster on Binocular Vision—Tyndall on Polarity of Diamagnetic Bodies, 1120. Jacob on 70 Ophiuchi—Ross on Aurora Borealis—Brown on Observatory of Augustus Mullay—Johnson on Photo-Barograph and Thermograph—Russell on Meteorology of U.S. and Canada, 1121. Symmonds on Rainfalls, 1121. Brewster on Triple Spectrum, 1156. Tyndall on Magnetic Induction, &c.—Thomson on Magnetized Iron, on New Instruments for Measuring Electrical Potentials, and on Aluminium, 1157. Brewster on Absorption of Matter by Surfaces, on Auri in Mica, and on Decomposed Glass, 1153
- Sec. B.—*Chemical Science*—Aluminium—Andrews on Polar Decomposition of Water—Penny on Phosphorescence and Composition of Plate Sulphate of Potash, 1092. Liebig on Canic Acid—Rathenow's Photographs by Photograph Process, 1093. Farrar on Eruption of Vesuvius—Calvert on Alloys of Iron and Aluminium—Edwards on Titaniferous Iron of Mersey Shore, 1122. Forbes on Action of Sulphurates—Laws and Gilbert on Agri-

SOCIETIES—continued.

- cultural Chemistry—Hassall on Adulterations of Food—Mac-lagan on Bread—Thomson on Atmosphere during Cholera, 1123.
 Penny on Food from Kelp—Clark on Softening Water, 1131.
 Sec. C.—*Geology*.—Miller on Fossil Floras of Scotland, 1093. Bryce on Glacial Phenomena of Lake District—Dawson on Fossils of Coal Formation of Nova Scotia—Sir E. Belcher on Discovery of Ichthyosaurus and other Fossils in Northern Expeditions—Hopkins on Goldbearing Districts—Campbell on Quartz Formation of Australia—Sorby on Older Rocks of Highland Border—Murchison on Crystalline Rocks of North Highlands, 1124. Sorby on Currents, 1126. Forbes on Rocks of South of Norway, 1128. Bateman on Supply of Water, 1129.
 Sec. D.—*Zoology and Botany*.—Dickie on Effects of Last Winter on Vegetation at Aberdeen, 1094. Dawson on Meriones and Arvicole found in Nova Scotia—Patterson's Zoological Diagrams—Lowe on Mortality among Swallow Tribe—Murray on Zoology of Western Africa, 1098. Baker on Geological Distribution of Plants, 1096. Zoophytes, &c. of Coast of Norway—Ward on Vivaria—Carpenter on Comatula rosacea in Lamlash Bay—De Clausen on Paper Pulp, 1126. De Clausen on Hancornia speciosa, &c., and on Algae for Soaps—Ashworth on Propagation of Salmon, 1127. Daubigny on Influence of Light on Germination—Michelson on Vegetation of Crimea—Kolliker on Transparent Fishes—Belcher on Trunk of Tree in Arctic Circle, 1128.
 Sec. E.—*Geography and Ethnology*.—Baikie on Expedition up Niger and Tchadai—Barth on Timbuctoo—Anderson on Journey to Lake Nyami, and Late Explorations in Africa, 1097. Davis on Skulls of Ancient Romans—Oppert on French Scientific Expedition to Babylon—Retzius on Celtic, Sclavie, and Aztec Crania—Giles on Surveys of Tidal Harbours—Mersey Inquiry Committee, 1098. Parsons on Chinese—Belcher on Arctic Expedition, 1129. Livingston on Tropical Africa—Juskiu on Isthmus of Darien—Robertson on Ascent of Sumner Parbat, 1159. Susini on Water-Courses of South America, 1160.
 Sec. F.—*Statistics*.—Walsh on Labouring Population of Jamaica—Newmark on Emigration—Buchanan on Physiological Law of Mortality, 1098. Yates on our National Strength, 1099. Effect of War on Russian Produce—Locke on Agricultural Labourers, 1129. Snow on Training Schools—Simmonds on Newspapers, 1130.
 Sec. G.—*Mechanical Science*.—The Chairman on the Objects of the Section—Fairbairn on Strength of Iron Plates, and on Boiler Explosions—Smith on the Steam Engine—Thomson on Measurement of Running Water, 1099. Macquinn-Rankine on Patent Laws, 1100. Adams on Artillery and Projectiles, 1100, 1130. Dobson on Revolving Storms, 1100. Babbage on Mechanical Notation, 1160. Adams on Railways, 1161.

HYDE HOUSE SCHOOL, Winchester.

Dr. BEHR, assisted by Graduates from the Universities of Oxford and Cambridge, and Possessors of all the Honorary Degrees, undertakes the EDUCATION of a limited number of PUPILS, the Sons of Noblemen and Gentlemen, with a view to prepare them for the Public Schools, Naval and Military Colleges, or any of the various Professions.

The system of instruction includes:—1. THE CLASSICS and MATHEMATICS—in which the Pupils will be thoroughly well grounded, according to the most approved methods. 2. THE MODERN LANGUAGES—to which special attention will be paid, and for the acquisition of which more than ordinary advantages are afforded. 3. THE STUDY of the PRINCIPLES of an ENGLISH EDUCATION—all or any of which may be deemed more or less prominent in the plan of Study, as may be deemed desirable in any particular instance. 4. FORTIFICATION, DRAWING, FENCING, and MILITARY TACTICS—in which the Military Club receives regular instruction.

The Establishment is divided into an Upper and a Lower School. Pupils, in the latter division, are thus kept separate from their seniors, both in the hours of study and recreation.

References may be made to the parents of Pupils and others, including several Noblemen, Gentlemen of the Church, and individuals of high standing in society.

Terms:—15 under 12 years of age, 50 Guineas per annum; above that Age, 60 Guineas. No Extras whatever, except Books and Medical attendance.

A Quarter's notice must be given in case of a Pupil being removed from the School.

SCHOOL ASSISTANTS, duly qualified, in

search of Engagements either in Ladies' or Gentlemen's Establishments, are invited to Register their Names, Qualifications, and References, in person, at Messrs. RILEY, BROTHERS, School Book-sellers and Stationers, 150, Aldersgate-street, London.

These Registers are opened Half-yearly, for One Month, from the 16th of December and June. No charge is made, the object being to provide Messrs. R.'s connexion with Assistants of ability and worth.—Office hours 10 to 4 o'clock.

School Stationery, and every requisite for School and College use are supplied by R. B. on the most liberal terms.

TO PROFESSIONAL PIANOFORTISTS

requiring a good Instrument, well adapted for Concerts, a Broadwood's 62 Octave Grand Piano-forte, cost 120 Guineas; rich powerful tone, patent harmonic sounding-board, handsome solid rosewood case. Price 20 Guineas.—23, Hemingford Villas, Barnsbury Park.

READING AND ACTION.—MR. CHARLES

W. SMITH continues to give PRIVATE LESSONS. Extract from Testimonial:—"I soon learned to appreciate the faculty you possess for infusing into others the power you have over the voice in its pitch, and all its varied modulations, and which, all must admit, gives a man, in his communication with the world, a great influence over others."—Terms, 5s. a Lesson.—Smith's "Hints on Elocution" sent, post free, for fourteen stamps. "Materials for years of reflection."—Common Blunders made in Speaking and Writing" post free for five stamps. "It ought to be on every table."—Bridgewater—Address Mr. SMITH, Buckingham Chambers, 11, Buckingham-street, Strand.

WANTED.—A PARTNER, with a Capital of 20,000l. to 30,000l., for an old-established SUGAR-REFINING BUSINESS in Liverpool. for BUILDING, close to the School, where Residents have the privilege of the Foundation for their Sons. Terms very moderate. Address F. C. S. 11, Berners-street, Oxford-street.

ELOCUTION AND ENGLISH LITERATURE.

—A Clergyman, well versed in the above branches of Education, GIVES LESSONS in private families, in schools, and at his own residence.—Apply to or address Rev. R. B. 34, Keppel-street, Russell-square.

TO NOBLEMEN, GENTLEMEN, and DIRECTORS of PUBLIC INSTITUTIONS.—The Advertiser, who is of native habits and well connected, and who has been engaged for many years in a position of trust, and not wholly dependent, is desirous of an ENGAGEMENT as LIBRARIAN, SECRETARY, or other occupation where he would be usefully employed. Highly satisfactory references can be given, and security if required. Address to J. B. Park-square East, Regent's Park.

GERMAN LITERATURE.—A Gentleman

who gives German Instructions in a Public School would be glad to meet with a SCHOOL or PRIVATE PUPIL, either in Town or in the Country, to attend upon reasonable terms.—Address A. B. 59, Bishopsgate-street Within.

A Married Medical Man, retired from practice,

and residing in a healthy Village in Surrey, within an hour's distance from Town by railway and ten minutes' walk from a station, RECEIVES a single INVALID PATIENT.—For Terms, Address, and References, apply to Mr. NEWBY, Publisher, 30, Welbeck-street, Cavendish-square.

THE FORBES MEMORIAL.

At a Meeting of the Friends of the late Professor EDWARD FORBES, held on the 9th of December, 1854, it was Resolved:—

1. That there shall be a Memorial, in connexion with the Museum of Practical Geology, commemorative of the eminent abilities and high social qualities of the late Professor EDWARD FORBES.

2. That for this purpose a subscription be at once instituted.

3. That a Committee, consisting of the following gentlemen, be appointed to carry out the objects of the Meeting:—Robert Godwin Austen, Esq. F.R.S. Secretary Geological Society, Chisworth Manor, Guildford.

Sir Henry T. De la Beche, F.R.S., Director of the Geological Survey of Great Britain, Jermyn-street.

Leonard Horner, Esq. F.R.S., 17, Queen's-road West, Regent's Park.

Thomas Henry Huxley, Esq. F.R.S., Government School of Mines, Jermyn-street.

Sir Charles Lyell, F.R.S., 53, Harley-street.

Robert Gordon Latham, M.D. F.R.S., 29, Upper Southwick-street, Hyde Park.

Sir Roderick Impey Murchison, F.R.S., 16, Belgrave-square.

Richard Owen, LL.D. F.R.S., Royal College of Surgeons, Lincoln's Inn-fields.

William Sharpey, M.D. Sec. R.S., 31, Gloucester-crescent, Regent's Park.

William Smith, LL.D., 31, Regent's Villas, Avenue-road.

Treasurer—Leonard Horner, Esq.

Secretary—T. H. Huxley, Esq.

The Committee having twice met, has resolved that the Memorial shall consist of an Annual Medal, bearing the effigy of Edward Forbes, with a Prize of Books, to be awarded to the most distinguished Student of Natural History in the Government School of Mines; and also of a Marble Bust of that eminent Naturalist, to be placed in the Hall of the Museum of Practical Geology.

Subscriptions will be received by any Member of the Committee, or may be paid to the account of the Treasurer, at Messrs. Coutts & Co. 59, Strand.

THOMAS H. HUXLEY, Secretary.

HOME EDUCATION for BOYS.—A Physi-

cian (Fellow of the London College of Physicians, and a Graduate of Cambridge), residing at the Sea-side, is desirous of meeting with ONE or TWO BOYS, who would share with his own sons, aged twelve and ten years, the advantages of an excellent Resident Tutor. As special attention would be paid to the comfort, health, and physical education of the children, placed under his care, this is worthy the notice of the parents of boys whose health may require particular supervision. References, if required, can be given to some of the most eminent Physicians in London. Terms, 100 Guineas per annum.—Address M.D., care of Messrs. T. & W. Boone, Booksellers, 29, New Bond-street.

MR. B. H. SMART, formerly of Connaught-

terrace, now of 37, Wyndham-street, Bryanston-square, acquaints his friends that he CONTINUES to INSTRUCT clerical and other PUPILS in ELOCUTION, to meet Classes in Families and Schools for English generally, and to engage for Public Readings and Lectures.

ORMOND CLUB, Great Ormond-street,

Bloomsbury.—Gentlemen desiring the convenience of a CLUB in this locality, at a moderate subscription, may obtain all necessary information, as to the mode of admission, &c., by personal application, or by letter addressed to the Secretary at the Club House.

AS PRIVATE SECRETARY to a Nobleman

or Gentleman, or as Secretary to an Institution.—The Advertiser, age 28, who holds a responsible Government Appointment, being at liberty early in the afternoon, is desirous of an ENGAGEMENT in either of the above capacities. He has acted as Private Secretary to a late Diplomatist, has received a Classical education, understands French, German, and Spanish, is well experienced in Correspondence and Accounts, and is prepared with satisfactory references as to competency and respectability.—Address, G. H., Post-office, Stockwell Green.

THE PROVINCIAL PRESS.—A GENTLEMAN,

who has been long honourably connected with the Press, as Editor and otherwise, and whose present engagements in London afford him the means of obtaining the best information on all political subjects, would be glad to furnish LEADERS, or a WEEKLY LETTER, to a Provincial Journal of Liberal politics, on moderate terms.—Address SICMA, Tidd's Library, 7, Goswell-road.

TO PICTURE COLLECTORS and AMA-

TEURS.—PICTURES by the OLD MASTERS HISTORICALLY TRACED, through Works connected with the Fine Arts, by a FOREIGN CONNOISSEUR, who has an extensive Collection of Prints and Books, on, or illustrative of, the ornaments of his disposal, well as Catalogues of the most important Sales of Pictures that have taken place here and abroad since 1650.

COLLECTIONS CATALOGUED and CLASSIFIED with the greatest accuracy under their proper Schools and Masters.

THE SKETCHES OF THE OLD MASTERS, generally effected, and WORKS by the OLD MASTERS restored by one of the most skillful Artists of the day in that branch of the Art.

The highest references given.

Address "AMALFI," care of Mr. Dolby, 55, Quadrant, Regent-street.

CHRISTMAS PRESENTS.—TALLANT & ALLEN

solicit an INSPECTION of their WELL-SELECTED STOCK of NEW and ATTRACTIVE BOOKS, suitable for the Present Season.—21, Warwick-square, Paternoster-row.

TO THE EDITOR of the ATHENÆUM.

Sir—As you thought proper to insert in your advertising column a very serious attack on me, it may be that I ought to take some notice of it through the same channel.

The facts between Mr. Outrim and myself are these:—In the *Art-Journal* for December the series of the "Vernon Gallery" was brought to a close, excepting one plate, the ornaments of which I had not time to send, and to promise it as an extra plate in some future number. It was necessary for me to account for the omission, and I did so in the following words:—

"It is only just that the blame should rest with the party who has committed the offence. I placed this picture—'The Vineyard in the South of France'—in the hands of Mr. J. Outrim, engraver, on the 29th of September, 1851; and by his signed agreement, he was bound, under a penalty, to deliver it finished, 'executed in the best manner of which he is capable,' on the 31st of July 1852, upon a copy about two years and four months. We have every available means to induce him to finish or to relinquish the plate—in vain. His pledges and promises, frequently made, have been as frequently broken; and he has succeeded in placing us in a very embarrassing position by compelling us to issue the Part without this engraving."

As Mr. Outrim has thought fit to deny that he was "under a penalty," I submit a copy of the printed agreement which he signed:—

"I hereby agree to engrave, for the proprietors of the *Art-Journal* a steel plate, in the line manner, the subject of which is 'Vineyard in the Claret Vineyards,' after Uwins; the size of the engraving to be—by inches by—; to be executed in the best manner of which I am capable, and to be done to the entire satisfaction of the said proprietors, and subject to the approval of the artist appointed by them for its revision, for the sum of one hundred and ten guineas; one third to be paid on delivery of an approved etching, and the remainder on approval and delivery of the plate."

"And I further engage to complete and deliver the same, with the drawing, sketch, or Print, uncoloured, on or before the 31st day of July, 1852, or to forfeit the sum of five pounds per month so long as I retain it in my possession beyond the stipulated date for delivery. Dated this 29th day of September, in the year of our Lord one thousand eight hundred and fifty-one."

What was inserted in the *Art-Journal* for December was all I considered it necessary to say in explanation; it was needless to comment upon a course of conduct on the part of Mr. Outrim to which I have been exposed only in common with all other persons who have employed him.

I have less than succeeded in obtaining the plate, by paying Mr. Outrim for work not done, and it is now in the hands of Mr. Stocks, A.R.A., to be finished by that gentleman.

To certain untrue statements and absurd insinuations contained in Mr. Outrim's letter, which he has published, I do not condescend to reply. I should be ill qualified for the position I occupy if I felt it necessary to do so.

Many years ago I gave Mr. Outrim the first engagement he ever had,—to engrave a plate for the *Annals*, for which I paid him the sum of Forty guineas. The agreement for engraving the plate for the "Vernon Gallery," is for the sum of One Hundred and Ten Guineas; it was to be finished in ten months.

During the last twenty-five years I have had the happiness to employ nearly every engraver of celebrity in England; and I believe each engraver thus employed has executed for me more than three or four plates. At the present moment, I have the aid of no fewer than thirty engravers, all eminent in their profession.

I now have also the advantage of assistance from twelve of the best engravers of France, Belgium, and Germany;—this is, I imagine, the most complete and successful establishment of the kind, and utterly false statement of "five shillings a day."

Your obedient servant,

THE EDITOR OF THE *ART-JOURNAL*.

January 3, 1855.

CONVERSAZIONE.—To SECRETARIES.—

The Advertiser has a very interesting OFFICIAL INVENTION, which he would be happy to exhibit at any Conversezione or numerously-attended Soiree, in Town or Country. The exhibition would in all cases be FREE, as the Advertiser wishes to make the invention generally known. Secretaries, and others wishing to secure the exhibition for their meetings, are requested to send particulars to T. H. C., 13, Bayham-place, King-street, Camden Town.

ETHEL; OR, THE DOUBLE ERROR.

By MARIAN JAMES.

"*'Ethel'* is one of the best books of the quarter, care and thought have been liberally bestowed upon it. A gentle natural earnestness breathes warmth into every page, and carries us through from beginning to end with unflagging interest."—*Westminster Review.*

"The evidently warm and genuine feeling with which it is written lured us into reading her book through from beginning to end."—*Leader.*

"*'Ethel'* is a tale of the right sort. The authoress writes with good knowledge of her subject—Woman's devoted, conscientious, self-sacrificing nature. It is a book which may be placed with great advantage in the hands of all readers."—*Atlas.*

I.
WORLDS BEYOND the EARTH. By
MONTAGU LYON PHILLIPS. Small 8vo. [Just ready.]

II.
HISTORY of the OTTOMAN TURKS,
from the Foundation of their Empire to the Present Time.
Chiefly based upon Von Hammer. By PROF. CREASY,
Author of 'The Fifteen Decisive Battles of the World.'
Vol. I. (complete in Two) 8vo. with Maps and Plans, 14s.
"With a profusion of materials at his command, and with
that critical acumen and talent for historical composition for
which he has already earned a high reputation, the author has
produced a book of which it is not difficult to predict that it
will prove the standard work of English literature on the sub-
ject of which it treats."—*John Bull*.

III.
**OUR CAMP in TURKEY, and the
WAY TO IT.** By Mrs. YOUNG, Author of 'Cutch,' 'West-
ern India,' &c. Post 8vo. 7s. 6d.
"Will be devoured by all who are interested in all that con-
cerns our brave army in the East."—*Britannia*.

IV.
**HABITS and MEN; with Remnants of
Records on the Makers of Both.** By DR. DORAN, Author of
'Table Traits and Something on Them.' Second Edition.
Post 8vo. 7s. 6d.
"Not only amusing, but full of strange information, that
every one would like to possess."—*Times*.

V.
**HISTORY of OLIVER CROMWELL
and the ENGLISH COMMONWEALTH, from the Execu-
tion of Charles I. to the Death of Cromwell.** By M. GUIZOT.
2 vols. 8vo. 28s.
"An admirable narrative, far more candid than any from
an English pen."—*Times*.

VI.
**MEMORIALS and CORRESPON-
DENCE of CHARLES JAMES FOX.** By the Right Hon.
LORD JOHN RUSSELL, M.P. 3 vols. 8vo. (complete in
Four), 42s.
"Seldom has the character of a great man been so much
exalted by a posthumous of his letters, as the whole character
of Fox is raised by this work."—*Edinburgh Review*.
"No Englishman who desires to understand the history of
his country from 1768 to 1793 can fail to read this work with
advantage and pleasure. It contains so much authentic infor-
mation, accompanied with criticism so intelligent and so
candid."—*Edinburgh Review*.

VII.
**THE CRIMEA, the BLACK SEA, and
the BALTIC; including an Account of Sebastopol.** By
CHARLES HENRY SCOTT. 2nd Edition. Post 8vo. 7s. 6d.
"Of the Crimea Mr. Scott saw more than most travellers,
and he had an opportunity of inspecting Sebastopol and its
fortifications under circumstances of peculiar advantage."
—*Literary Gazette*.

VIII.
**A HISTORY of CHRISTIAN
CHURCHES and SECTS, from the Earliest Ages of Chris-
tianity.** By the Rev. J. R. MARSDEN, A.M., Author of 'The
Early and Later Puritans.' Parts I. and II. 8vo. 7s.
"This work will be completed in Eight Monthly Parts,
price 3s. 6d. each.
"Mr. Marsden displays great candour and moderation in
the spirit of his work, while its information is carefully pre-
pared and presented with precision and clearness."—*Literary Gazette*.

IX.
Bentley's Monthly Volumes.
**JESSE'S MEMOIRS of the COURT of
ENGLAND UNDER the STUARTS; including the PRO-
TECTORATE.** Vol. I. (complete in Three), crown post 8vo.
beautifully printed and bound, with an Illustration, 6s.
The price of the twelve Volumes to be published in the
course of 1855, at 6s. per Volume, would be 72 12s., but in order
to give an advantage to Subscribers, they will be supplied with
the first twelve Volumes at 3l. 5s., on remittance of that
amount with the order.

X.
**TABLE TRAITS and SOMETHING
ON THEM.** By Dr. DORAN. Crown 8vo. 6s.
"An excellent book."—*Examiner*.

XI.
**THE LIFE and CORRESPONDENCE
of LORD METCALFE, late Governor-General of India,
Governor of Jamaica, and Governor-General of Canada.** By
JOHN WILLIAM KAYE, Author of 'The History of the
War in Afghanistan.' 2 vols. 8vo. 39s.
"Few works better deserve to be studied by the civil and
military members of the public service."—*Athenæum*.

XII.
**DISCOVERY of the SITE of the DE-
STROYED CITIES of the PLAIN—SODOM and GO-
MORRAH.** By M. DE SAULCY. Second Thousand. 2 vols.
8vo. with Maps, 39s.
"The most striking discovery within the range of Biblical
antiquity."—*Guardian*.

London: RICHARD BENTLEY, Publisher in
Ordinary to Her Majesty.

13, GREAT MARLBOROUGH-STREET.

HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED

THE FOLLOWING NEW WORKS.

**TROPICAL SKETCHES; or, Re-
MINISCENCES of an INDIAN JOURNALIST.** By
W. KNIGHTON, M.A., Author of 'Forest Life in
Ceylon.' 2 vols. 21s.

From the LITERARY GAZETTE.

"Mr. Knighton's 'Tropical Sketches' contain valuable as well
as entertaining records of his life and experience in the East.
Besides describing those scenes and occupations common to all
Anglo-Indians, he gives us an insight into matters which he had
peculiar means of observing, in his capacity of journalist, and as
an inspector under the Council of Education at Calcutta. While
the greater part of his book consists of light reading, it also pre-
sents his views on subjects of public importance, which may thus
be brought before many who would avoid more formal works on
Indian administration."

From the MORNING CHRONICLE.

"We are glad to meet Mr. Knighton again in the field of Indian
literature. Encouraged by the friendly reception which was ac-
corded to his former volumes on 'Forest Life in Ceylon,' he has
followed them up with the present sketches, which show the same
spirited description of scenery, and the same easy and lively varia-
tion of incident. In 'Tropical Sketches' he has produced a couple
of volumes filled with much fresh and vigorous writing, abounding
with stirring incidents, and giving a penetrating glance into the
core of Indian society. We are thankful for the pleasure his
volumes have afforded us, and cordially recommend them to the
attention of our readers."

TURKEY; its HISTORY and

PROGRESS: from the JOURNALS of SIR JAMES
PORTER: continued to the Present Time, by SIR
GEORGE LARPENT, Bart., &c. 2 vols. 8vo. with Illus-
trations, 30s. bound.

HOME LIFE in RUSSIA.

Revised by the Editor of 'Revelations of Siberia.'
2 vols.

"So little is known in this country of the internal condition of
Russia, or the state of society in that enormous empire, that the
contents of these volumes will naturally be perused with great
curiosity."—*Morning Herald*.
"The special recommendation of the work to us is the novel
view and clear insight it affords Englishmen of the real character
of the Russians. Their sayings and doings, and the machinery of
their society, are all laid unsparingly bare."—*Sunday Times*.

The LIFE of MARGUERITE

D'ANGOULEME, QUEEN of NAVARRE, Sister of
Francis I. From numerous Original Sources. By MISS
FREER. 2 vols. with fine Portraits, engraved by Heath,
21s. bound.

The ROMANCE of the FORUM;

or, Narratives, Scenes, and Anecdotes from Courts of
Justice. SECOND SERIES. By PETER BURKE, Esq.,
Barrister at Law. 2 vols. 21s.

"This second series of the 'Romance of the Forum' equals the
first in interest and variety. The records of courts of justice supply
materials of true history far stranger than any inventions of
fiction, and Mr. Burke selects with tact and describes with skill
many wonderful and striking stories."—*Literary Gazette*.

THE NEW NOVELS.

ANTIPODES; or, The New

EXISTENCE. A TALE of REAL LIFE. By A
CLERGYMAN. 3 vols.

OAKLEIGH MASCOTT. By

L. HOWE. Dedicated to Professor AYTON. 2 vols.

"A deeply touching story, written with exquisite taste and
feeling."—*John Bull*.

"A tale of absorbing excitement."—*Messenger*.

"This tale is told with much spirit and vivacity."—*Observer*.

"This novel is one that will merit, and not lack, good testi-
monials."—*Examiner*.

HERBERT LAKE. By the

Author of 'ANNE DYSART.' 3 vols.

"This story is simple, natural, and human, and for that very
reason it is passionate, pathetic, and interesting. The sentiment
is healthy and natural, the diction easy, fluent, and unaffected,
and the incidents, though novel and romantic, are yet brought
about with such skill as to wear the aspect of necessary results—a
great achievement in novel writing. There is the spontaneity of
genius about the book, and that is its highest praise and greatest
charm."—*Morning Post*.

THE YOUNG HUSBAND. By

MRS. GREY. 3 vols.

"The 'Young Husband' is likely to be a great favourite. The
story contains abundant sources of interest, and is told with clear-
ness and skill,—often, indeed, with considerable dramatic power."
—*Morning Chronicle*.

THE CURATE of OVERTON.

"The startling secession of such men as Newman, Manning
and Wilberforce, render the revelations which the author has
made in these interesting and instructive volumes extremely well
timed."—*Britannia*.

MURRAY'S BRITISH CLASSICS.

PUBLISHED IN
DEMY OCTAVO MONTHLY VOLUMES.

Examiner.—"Mr. Murray's British Classics, so edited
and printed as to take the highest place in any library.
Beyond all question the cheapest books of the day."

Athenæum.—"Those who love to collect our standard
authors in handsome library editions may well congratulate
themselves on the issue."

Notes and Queries.—"Distinguished by skillful editorship,
beautiful and legible type, fine paper, compactness of bulk,
and economy of price."

Quarterly Review.—"A series of the British Classics which
is undoubtedly the best selected and edited, the cheapest
and the handsomest that has ever issued from the press."

This Day, Vol. III. (completing the work),
8vo. 7s. 6d.

JOHNSON'S LIVES OF THE ENGLISH POETS.

Edited with Corrective and Explanatory Notes.
By PETER CUNNINGHAM, F.S.A. 3 vols.
8vo. 22s. 6d.

"The most popular and entertaining of all Dr. Johnson's
works."—*Croker*.

"That admirable performance, 'The Lives of the En-
glish Poets,'—which is the richest, most beautiful, and,
indeed, most perfect, production of Johnson's pen."
—*Boswell*.

"We are much mistaken if this Edition is not destined
hereafter to be the standard one in English literature. Mr.
Cunningham has gone about his work *con amore*, and, as
Burke once said of Johnson himself, he has done it in a
workmanlike manner."—*Literary Gazette*.

This Day, Vol. VI. (to be completed in 8 vols.)
8vo. 7s. 6d.

GIBBON'S DECLINE AND FALL OF THE ROMAN EMPIRE.

Edited, with Notes, by WILLIAM SMITH,
LL.D., Editor of the 'Dictionary of Greek and
Roman Antiquities,' &c. With Portrait and Maps.

This Edition includes the Autobiography of Gibbon,
and is distinguished by careful revision of the text,
verification of all the references to ancient writers, and
Notes incorporating the results of the researches of
Modern Scholars and the discoveries of Recent Trav-
ellers.

"An edition incomparably the best in every respect that
has hitherto appeared."—*Examiner*.

"The task of editing could not have fallen into abler
hands than Dr. Wm. Smith. If there be any man capable
of bringing to bear upon the improvement of Gibbon's work
the various additions which have been made to our know-
ledge since his time, it is Dr. Smith."—*Athenæum*.

Now Ready, with Vignettes, 4 vols. 8vo. 30s.

THE WORKS OF OLIVER GOLDSMITH.

Printed from the last Edition revised by the
Author. Edited by PETER CUNNINGHAM,
F.S.A., Author of the 'Handbook of London.'

"Well edited by Mr. Peter Cunningham, and beautifully
printed."—*The Times*.

"The best editions have been consulted, and the present
volume gives evidence of careful and conscientious editing."
—*Guardian*.

"Mr. Cunningham, whose scrupulous exactness is ge-
nerally known, has furnished the first complete and accurate
reprint of Goldsmith. Numerous errors which had crept
into previous editions are corrected, omitted passages are
restored, and entire pieces have been added."
—*Quarterly Review*.

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, JANUARY 6, 1855.

REVIEWS

Prison and Banishment. From the Memoirs of Iskander—[Tyurma i Ssuilka. Iz zapisok Iskandera]. London, Sold at the Russian Printing Office.

ARE many of our readers aware that there is a Russian press in London? We do not mean an Anglo-Russian press—newspapers conducted more or less in Russian interests and animated with a Muscovite spirit; but a veritable Russian press,—printing Russian books in the Russian language, for the purpose of circulation in Russia? Such is the fact. This press is active, vigilant, prolific. Moreover it is free. No censor suggests its issues, no police controls its types. It prints what it pleases; and it circulates what it can. In a word, the Russian Free Press in London is a Democratic Press.

There is a visible destiny in the connexion of England with Russia. Three centuries have now elapsed since the news came to England that Richard Chancellor, on his voyage in search of a north-east passage to China, had unexpectedly discovered the Russian Empire. The intelligence reached London at a time when Spain and England were more closely connected than ever, before or since; and there is in the British Museum a curious contemporary pamphlet, issued in Spain, containing two letters, one from Mary, Queen of England, to the Princess of Portugal, on the happy "reduction" of the English to obedience to the Roman See, and the other from a Spanish cavalier then in London, perhaps Ercilla of the *Araucana* himself, giving an account "how the English have discovered certain new Indies" ("como los Ingleses han hallado unas nuevas Indias"). In this brief narrative the Spaniards are informed that Chancellor has come on "a land never found until now, for it is neither in the navigation charts nor in the map of the world"; and it is added, that the newly-discovered nation is one of "great policy." The latter clause of the description has been signally verified in the lapse of time. There were three "new Indies" discovered in that generation; but how different has been the fate of the Mexico of Montezuma,—the Peru of Atahualpa,—and the Russia of Ivan Vasilevich the Terrible!

It was the English who first brought Russia into connexion with the world beyond sea; and it was from England, though not from an Englishman, that an impulse was given which led to a new era in the literary history of the country. The '*Grammatica Russica*' of Ludolf, which issued from the University press of Oxford, in 1696, was the first Russian grammar ever printed, and, according to Ludolf's statement in the Preface, the second Russian book. He expressed his regret that the Russians of that time,—the time of Swift and Addison,—persisted in the use of an obsolete dialect, the Church Slavonic, for all literary purposes except one,—the '*Ulozhenie*,' or Code of Laws, being the only work printed in the vernacular language. He expressed his hope that his example would lead the Russians to think their mother-tongue worthy of notice and cultivation. "It is not," he observed, "contrary to the fundamental law of Russia, as some maintain, to study arts and learning. On the contrary, his present Czarish majesty warmly desires the cultivation of the intellects of his subjects." His "present Czarish majesty" was Peter the Great, who, in the year after the publication of the Grammar, commenced the tour through Europe, in which he studied ship-building in the incognito of a ship's carpenter, and who, before

Ludolf's death, in 1710, had remodelled the Russian alphabet to its present shape, and set Russian literature afloat as well as a Russian fleet.

Whatever may have been the wishes of England in regard to the growth of Russian power, there has, we presume, never been a difference of opinion as to the growth of literature and learning among a race which it was desirable, for its own sake and that of others, to soften and humanize. The progress of literature in Eastern Europe has never attracted so much attention in Western Europe as it deserves; but that attention has always been of a friendly and sympathizing character. It has often been a matter of regret, though not of surprise, that nothing could be known of the independent and untrammelled voice of the Russian mind. Even in the darkest times of Western Europe there was always a means for the conquered political or religious party of any State to make its sentiments known and to preserve them for posterity. The Spanish and Italian martyrs of the Protestant Reformation still speak in the pages of Valdez and Vermiglioli,—the Roman Catholics of England kept active the presses of Douay and Louvain,—the victims of the dragonnades of Louis the Fourteenth deluged England and Germany with their pamphlets,—the victims of our own Restoration found a refuge and a voice on the shores of Lake Leman. Of late years, the Polish emigration has contributed to Polish literature the most brilliant pages the language can show in its career of centuries.

With Russian literature, the case was different. Under the yoke of a rigid censorship at home, it never until now possessed any means of production abroad. The obstacle, trifling as it may seem, of the peculiarity of the alphabet, may have had a strong influence in this. Certain it is, that an active circulation of prohibited books from beyond the frontier, in foreign languages, has always been kept up in Russia; so that a difficulty in finding means of introduction for the books when printed cannot have been the principal obstacle. Whatever the cause, the effect has undoubtedly been, that the whole literature of Russia, from its birth to within the last two years, has been, to a most remarkable degree, under the control of the Government,—that the voice of sixty millions has not uttered a sound that had not previously received the approbation of one man. To all who attach any value to a free press,—to all who think that it is of importance for the most numerous nation in Europe, and the one that holds the largest portion of its surface, to hear the two sides of any religious or political question, it was a piece of acceptable news to hear that precisely three hundred years after Chancellor had sailed into Archangel, a Russian free press had been established in London.

The first Russian publication ever issued in England,—in May 1853,—was a quarto sheet, under the title of '*Yuriev Den*'—'*St. George's Day*.' '*St. George's Day*' is a sound of mournful significance in Russian history. It was on that day that the free peasantry of the country were anciently accustomed to hire themselves from year to year to the masters, migrating from place to place as it suited their convenience. In the year 1593, it is supposed—for the point is subject to some discussion—this privilege was taken away by Boris Godunov, then sovereign of Russia; the very man who had advocated freedom of commerce with Queen Elizabeth, in a spirit said to be in advance of his age. From that time to the present, the peasantry of Russia have been reduced to the condition of serfs attached to the soil. It is also, we believe, on *St. George's Day* that the beautiful custom prevails of letting

a bird loose to celebrate the return of Spring,—a custom alluded to by Pushkin in some pretty verses, said to be written during a temporary banishment.—

Abroad I still to customs cling,
Kept up at home from age to age;
And on the festival of spring,
I let a bird loose from its cage.
This from my fortunes took their sting,
Could I repine how heaven decreed 'em,
While, to a single living thing
I had the power of giving freedom?

The pamphlet on *St. George's Day* is addressed "To the Russian Gentry"—(Gentry is the nearest translation of "*Dvoryanstvo*"). It commences thus:—

Let the first free Russian word from beyond the frontier be addressed to you. It is in the midst of you that the need for independence has shown itself, the effort for freedom and all the intellectual activity of the age just past. It is amongst you that the self-denying minority is found which redeems Russia in the eyes of foreign nations and its own. From your ranks arose Muravyev and Pestel, Ruilyeev and Bestuzhev. From your ranks came Pushkin and Lermontov. We, too, who have left our country that one free Russian voice might be heard, though in a foreign land, we came from your ranks, and it is to you that we first address ourselves. Not with words of reproach,—not with a summons to conflict, which at this moment is impracticable,—but with a friendly word on the common misery and the common shame, and with brotherly counsel. We are slaves [it continues] because our ancestors bartered their human dignity for inhuman privileges, and we make use of those privileges. We are slaves because we are masters. —[It goes on to remind them of the generous spirit shown in Russia when the question of serfage has been under debate.]—At Penza and at Tambov, at Yaroslavl and Vladimir, at Nizhny-Novgorod, and finally at Moscow itself, the question of emancipation met with sympathy, and never did it have to encounter that obstinate fury with which the American planters defend their black so-called rights.

This is generous and eloquent; but the reader is disheartened, who finds the outburst conclude with a pleading in behalf of Socialism,—as if the cause of emancipation were indissolubly bound up with it,—and who finds this language of menace addressed to the Russian proprietors.—

We trust in you. You have given pledges,—our heart does not forget them,—and that is the reason why we do not address ourselves direct to our unfortunate brethren, to point out to them their strength which they do not know, their means which they do not dream of, your weakness which they do not suspect, to say to them,—“Now, brethren, to your axes,—now, children, carry your straw to the manor-house,—let your masters be warmed for the last time.”

A distinct threat is further uttered that if this appeal to the masters fails to produce its effect, the peasantry will be roused at once to incendiarism and war. Such is the language, used in 1853, of one of the most cultivated of Muscovites,—of one who saw the useless deluge of blood shed in the socialist conflict of 1848,—of M. Alexander Hertzen.

The name of M. Hertzen is well known in Russia, and has of late years become known in France and Germany. It is now, we believe, about twelve years since he first attracted attention by a series of articles in the *Otechestvennuiya Zapiski*, one of those enormous Russian magazines which issue every month a quantity of matter more than equal to a number of one of our Quarterly Reviews. He must then have been about thirty years of age, if it be true, as one of his biographers reports, that he was born at Moscow during the conflagration of 1812. His father was a Russian, his mother from Wirttemberg,—and one of his first labours in the field of literature was his introduction of the Hegelian

philosophy into Russia. His 'Letters on the Study of Nature,' in which he pursues the history of all philosophies up to and including Bacon's, drew on him the marked attention of all the thinking men of his native country. His next appearance was as a novelist. Nowhere, perhaps, out of England and America are Messrs. Dickens and Thackeray more read and admired than in Russia, and their peculiar study of the people is combined in M. Herten's tales with those more daring excursions into moral speculation which form the characteristic of the school of France. M. Herten's education had been entirely Russian; it was in 1847 that he first obtained permission to go abroad. Some letters written on his travels in Germany appeared in the Petersburg periodical the *Sovremennik*, founded by Pushkin. Their continuation was soon prohibited, nor can the prohibition be matter of surprise. M. Herten was in Italy when the Revolution of February, 1848, burst forth,—he hastened to Paris, and was soon conspicuous in the French capital. At one time he is said to have been obliged to fly from Paris to Geneva; afterwards he returned through London to Paris; and for the last few years he has resided in London or near it.

It has been said that no man was ever written down except by himself. In a pamphlet, entitled 'Vom anderen Ufer' ('From the other Shore'), translated into German, we believe, by M. Herten himself, from his own Russian manuscript, there is an account of the conflict at Paris in July, 1848, which terminated in the defeat of the Socialists, concluding with these words, as the expression of his own feelings on the result:—"Now, therefore, hurrah for Chaos (*Und deswegen lebe das Chaos*)!—Hurrah for extermination!—*Vive la mort!*—Room for the future!" These words and many like them were published at Hamburg in 1850, when the writer's passion had, at all events, had time to cool.

Such, then, is the character of the writer who, immediately before the issue of the 'St. George's Day,' caused a lithographic circular to be dispersed in Russia, inviting contributions to the proposed establishment in London.—

Send us whatever you like [says the Circular]; all that is written in a spirit of freedom will be issued in print, from learned researches and essays on points of history and statistics down to romances, tales, and copies of verses. We are even ready to print them gratis. If you have nothing ready of your own, send us the prohibited works of Pushkin, Riulyev, Lermontov, Polezhaev, Pecherin, and others. The door is open; if you refuse to avail yourselves of it, on your own consciences be it. If we obtain nothing from Russia, the fault will not be ours. If repose is dearer to you than free speech, be silent. But this I do not believe. Up to this hour nobody has printed anything in Russian out of Russia, because there was nowhere a Russian free press. From the 1st of May, 1853, there will be one. To begin, while I am in hope and expectation of something from you, I will print my own manuscripts. As early as 1849 I thought to begin printing Russian books in Paris; but driven from country to country, persecuted by a train of miseries, I could not carry out my undertaking. Much of time, and heart, and life, and means I offered as a sacrifice to the cause of the West,—now I feel myself free from that obligation.

This invitation does not appear to have been successful. In a note to the work before us, 'Tyurma i Suilka,' published about a year and a half afterwards, M. Herten says bitterly:—

To publish the unprinted poems of Pushkin, Lermontov, Polezhaev, Riulyev, and others was one of our warmest wishes. We now think of applying with a petition, to the Russian Government or the clergy, to furnish us with these manuscripts—from laymen, journalists, progressists, &c., it is useless to expect them.

In the mean time, the most important works

that have issued from the Russian printing-office are the 'Fragmentary Tales' of Iskander (the pseudonyme of Alexander Herten, or rather the Oriental translation of his christian name) and the 'Tyurma i Suilka,' the narrative of his imprisonment and banishment, which we are now about to examine. This narrative is of peculiar value. In many respects it affords a sort of counterpart or pendant to the 'Prigioni' of Silvio Pellico,—but with this marked difference, that M. Herten is still proud of the course he adopted. In literary merit the work of the Russian seems to us far superior to that of the Italian. The abilities of M. Herten have never been denied by those who have become acquainted with his writings;—and this production has the advantage over all others in which he touches on politics, of being written in a moderate and unexaggerated spirit. It contains powerful sketches of character, with vivid descriptions of incident, and pictures of manners. In the Preface the writer tells us:—

At the close of 1852 I lived in one of the outskirts of London, near Primrose Hill, cut off from all the world by distance, fog, and my own good pleasure. I began to go into myself, to set myself to rights after a train of frightful events, misfortunes, errors. The history of the last years of my life presented itself before me clearer and clearer, and I saw with alarm that not one man, myself excepted, knew it; and that if I died the truth would die with me.

He began the chronicle, and did not desist till he had written two parts; of which 'Tyurma i Suilka' is the second in order, but published the first on account of its possessing more general interest.

The narrative commences with the alarm occasioned by the arrest of a friend by the police at Moscow in 1834. M. Herten was at that time a student at the University. He applied to some of the liberals of his acquaintance to procure him admission to the prisoner. His characters of them are strikingly drawn, especially of one, who was looked up to as the Coryphæus of Liberalism in Moscow. "His cabinet," we are told, "was ornamented with portraits of all the revolutionary celebrities from Hampden and Bailly to Fieschi and Armand Carrel." Hampden and Fieschi! The juxtaposition seems odd to us; but we dare say it will appear quite natural to the ghosts of those who fought for royalty in Chalgrove field. While labouring to see his friend, M. Herten was himself arrested,—and we obtain a close view of the proceedings of a Russian commission of inquiry into political offences. The accusation brought against them appears to have been that of St.-Simonism; but like Pellico, M. Herten avoids informing the reader of either the precise charge or the degree in which it was well founded. M. Herten, according to his own account, met the accusations with some flippancy.—

The Commission was assembled in the library of the President, Prince Sergius Mikhailevich Galitzin. I turned to the shelves and looked at the books. Among the rest was a voluminous edition of the memoirs of the Duke de St.-Simon. "See," said I, turning to the President, "what injustice! I am under prosecution for St.-Simonism, and in your own house, Prince, there are twenty volumes of his works." As the old Prince had never read anything in his life, he did not know what to answer; but the younger Galitzin looked at me with the eyes of a viper, and said "Do you not see they are the Memoirs of the Duke de St.-Simon who lived under Louis the Fourteenth?" The President smiled, shook his head at me as much as to say "You have missed fire," and added "Go on."

At the conclusion of the proceedings, Shubensky, one of the Commission, said to him, "Do you think we believe your assertion that there was no secret society among you?" M. Herten, in reply, demanded "Where is this

society?"—"It is your good fortune," said Shubensky, "that you did not succeed in doing anything. We stopped you in time; that is, to say the plain truth, we saved you." From the general tenor of M. Herten's narrative, we are led to suppose that Shubensky's remark was substantially correct. The sentence pronounced on many of those declared guilty by the Commission, of whom M. Herten was one, was relegation for an indefinite time to some distant government to serve in the civil service under the inspection of the local authorities.

The principal scene of M. Herten's detention was Viatka, where Tyuphaev was then the Governor, who had figured in his youth as a rope-dancer at all the fairs between Siberia and Poland. He was universally detested as a cheat and oppressor, but in 1838 his career was suddenly brought to a close. The present Nasliednik or Crown Prince of Russia, on a progress through the provinces, came to Viatka, received petitions against the governor, and made a report which ended in his abrupt dismissal, while M. Herten—who, in the same visit, had attracted the notice of the poet Zhukovsky, who travelled with the Prince—received permission to change his quarters to Vladimir, bringing him within the range of his friends at Moscow. This incident ends the volume of his memoirs; but we think we have heard that M. Alexander Herten was subsequently in the employment of the Russian Government at St. Petersburg up to the time of his obtaining permission to travel.

This is of course but the skeleton of the book; the details are well filled in, though—as in the 'Prigioni'—the want of stirring incident makes itself felt. As a specimen of the manner of the author, the story of Polezhaev has the recommendation both of intrinsic interest and of being complete in itself.—

I heard the story of Polezhaev from the lips of the poet himself, and more than once. Polezhaev, when a student at the University of Moscow, was already known for his beautiful verses. Amongst other things, he wrote a humorous poem, called 'Sashka,' a parody of Pushkin's 'Onyegin.' In this, putting no restraint on himself, he touched, in a joking tone and in very pretty verses, on a variety of topics, the Czar included. The poem circulated from hand to hand in manuscript. In the autumn of 1826 Nicholas, after sending to the gallows Pestel, Muravyev, and their friends, celebrated his coronation at Moscow. With others, festivities of this kind are the occasion of amnesties and pardons,—Nicholas, when he had solemnized his apotheosis, began anew to "strike the enemies of the country" like Robespierre after his foolish Fête-Dieu. The secret police handed in to him Polezhaev's poem. What follows? One night, about three o'clock, the Rector of the University awakes Polezhaev, orders him to dress himself in uniform, and to go to the office. There a warden (*popechitel*) awaits him. After having examined all the buttons on his uniform, and ascertained that none are wanting, and none over, he, without any explanation, invites Polezhaev into his carriage, and drives off. He takes him to the Minister of Public Instruction. The Minister gives Polezhaev a seat in his own carriage, and he is driven off again,—but this time straight to the Emperor. Prince Lieven went into the inner apartment, leaving Polezhaev in the ante-room, where some of the courtiers and the higher dignitaries were already in waiting, though it was only six in the morning. The courtiers imagined that the young man had done something to distinguish himself, and came without loss of time to engage him in conversation; one of them, a senator, proposed to him to give lessons to his son. Polezhaev was soon summoned into the cabinet. The Emperor was standing leaning on a bureau, and talking with Lieven. He threw on the new comer a searching glance the reverse of benignant as he entered; in his hand was a roll of papers. "Was it you," he inquired, "who wrote these verses?"—"It was," replied Polezhaev.—"Now, prince," continued

the Emperor, "I will show you a specimen of what university education is,—I will show you what our young people are taught there. Read these papers aloud," he added, turning anew to Polezhaev.—The agitation of Polezhaev was so strong that he was unable to read. The look of Nicholas was fixed immovably upon him. I know that look, and I know nothing more terrible, more hope-withering, than that colourless, cold, pewtery look.—"I cannot," said Polezhaev.—"Read," thundered the Imperial fugleman.—The sound of his voice restored Polezhaev to his powers; he opened the bundle of papers. "Never, in my life," he told me afterwards, "had I seen 'Sashka' so beautifully written, and on such excellent paper." At first he found it difficult to read; afterwards he got more and more in heart, and he finished the poem in a loud and spirited tone. In parts that were particularly cutting, the Emperor made a sign with his hand to the minister. The minister covered his eyes with alarm.—"What say you?" said Nicholas to Lieven, after the conclusion of the poem. "I will put an end to this corruption of manners; these things are a sign of something which I will root out utterly. What is this person's general conduct?"—The minister, it may well be supposed, knew nothing of the matter, but somewhat of humanity awoke within him, and he said his conduct was excellent, and so forth.—"That answer has saved you," said the Emperor; "but you must be punished as an example to others. Are you willing to enter the military service?"—Polezhaev was silent.—"I give you the means of purifying yourself by military service. Say, are you willing?"—Polezhaev answered, "I must obey."—The Emperor walked up to him, laid his hand on his shoulder, and said, "Your fate depends on yourself; if I forget you, you may write to me," and kissed him on the forehead.—Ten times over I made Polezhaev repeat to me the circumstance of the kiss, so incredible did it seem to me. Polezhaev swore that it was true. From the Emperor they took him to Diebitsch, who was also residing in the palace. Diebitsch was asleep; they waked him; he came out yawning and after reading a paper, asked a subordinate officer—"Is this the man?"—"It is, your excellency."—"Very well, a capital job," he said to Polezhaev; "you will serve in the army,—so did I. Look at me: you see I've got on; and perhaps you may be a Field-Marshal in time."—This out-of-place, coarse German joke was the kiss of Diebitsch. Polezhaev was then taken off to the camp, and put among the soldiers. Three years passed by, Polezhaev remembered the Emperor's words, and wrote him a letter. There was no answer. After some months he wrote another, and there was no answer either. Quite convinced that his letters had not reached their address, he deserted for the express purpose of delivering his petition in person. He did not conduct himself cautiously: at Moscow he saw his old companions, and was treated by them. It might be supposed that this would not long remain a secret. At Tver he was apprehended, and sent to his regiment, as a deserter, on foot and in chains. The Court-martial condemned him to run the gauntlet, and the sentence was sent to the Emperor for confirmation. Polezhaev resolved to deprive himself of life before the punishment. After searching about his prison in vain for some sharp weapon of any kind, he unbosomed himself to an old soldier, who was fond of him. The soldier understood and shared his feelings. When he heard that the answer had come, he brought him a bayonet, and, as he gave it to him, said, through his tears, "I sharpened it myself."—The Emperor did not confirm Polezhaev's sentence.—It was then he wrote his beautiful poem,—

Bez utyesheny
Ya pogibal
Moy zlobnuiy geny
Torzhestvoval, &c.

'Neath misery's weight
I sunk o'erpower'd
While adverse fate
Triumphant lower'd, &c.

Polezhaev was sent to the Caucasus; there, by way of distinction, they made him a sergeant. Years and years went by; his wretched, monotonous, prospectless situation broke his spirits:—to make himself a poet of the police, and sing the glories of Nicholas, he found impossible, yet this was the only way to free

himself from the knapsack. There was another course open to him, and he preferred it: he drank to forget. His poetical address 'To Corn-brandy' is terrible. He obtained permission to exchange into the Carabineer regiment stationed at Moscow. This bettered his situation considerably; but consumption was already at work on his chest. It was at this time that I became acquainted with him, about 1833. He dragged on for four years longer, and died in the Military Hospital. When one of his friends came to ask his body for interment, nobody knew where to find it: the Military Hospital drives a trade with the bodies,—sells them to the University or the Academy of Medicine,—prepares them as skeletons, and so forth. At last he found the body of poor Polezhaev in a cellar; it was crushed under some others, and the rats had gnawed off one foot. After his death, a collection of his works was published; and for a frontispiece it was intended to prefix his portrait in his soldier's cloak. The censorship considered this improper, and the poor sufferer was represented in officer's epaulettes,—he was promoted in the hospital.

We think our readers will agree with us, that the existence of such a press is of some importance. Much of the best literature of Russia is a contraband literature—existing only in manuscript,—and therefore liable to serious accidents. Whatever the moral nature of that literature—and of necessity it represents the intellectual anarchy of the country in which it is produced,—it is most desirable that it be preserved. In a land of social order like our own, the wildness, the impracticable theories, the revolutionary character of this Russian literature, will be noticed in the philosophic spirit with which we read the writings of our own Levellers and Fifth-Monarchy Men. Such a literature is a necessary phase in the growth of a nation,—and ought to be preserved with the jealous care which we bestow—or ought to bestow—on those documents of our own history which record its intellectual struggles.

Detached Thoughts and Apophthegms, extracted from some of the Writings of Archbishop Whately. First Series. Blackader & Co.

HERE is a little book which might without impropriety have been called "Whateliana"; and might aspire to a place beside the collections we mentioned the other day *à propos* of Selden's 'Table Talk'; for Anas include not only what is strictly colloquial, but (as in the case of the 'Casauboniana') extracts made from men's writings. There is, indeed, in the works of most authors something of a colloquial character,—an element which represents their mind under its free conversational aspect. In Johnson, there are passages here and there which only require the preliminary "Why, sir," to make them fit for the pages of Boswell. In Cicero, there are many gleams of that genial and familiar pleasantry which made his society delightful,—and, remembering which, the reader sighs over the loss of Zero's collection of his jokes, and regrets the fate of that 'Liber Jocularis' as one of the most melancholy catastrophes in the history of literature.

With Dr. Whately in his capacity of theologian we have no concern. But the Archbishop has a place (though scarcely an archiepiscopal place) in the literature of the day, as well as in its theology. The author of that 'Logic' which Mackintosh welcomed as "the restoration of an unjustly deposed art," and the value of which is emphatically recognized by Mill, is surely a considerable man in our literature. The present book aims at selecting from his writings such striking and pregnant remarks as exhibit their general qualities in a happy and condensed form. We have—or shall have, when the whole Series is out—the

prize plums and peaches of his Grace's garden. Other writers who have written much would be benefited by being similarly dealt with: for few are the books so perfect and costly, as works of Art, that they will no more bear cutting into pieces than a statue.

The main characteristic of the writings of Dr. Whately is shrewdness—sagacity. He writes as a first-rate banker with sufficient culture might be expected to write—always with the air of a man of business. As our old divines were often poetic, imaginative, discursive—so here we have a divine suited to a practical age—an age of railways and consols,—with a style as well suited for a newspaper as a pulpit,—reasonable, sensible, and straightforward. He talks straight to the purpose,—with a style strong, flowing, and crystal-clear to the very bottom.

In addition to this, however, Dr. Whately has obviously a strong perception of humour,—a quality which must not run riot in the writings of an Archbishop; and which, therefore, the Right Reverend Doctor keeps in stern subordination. But the latent power shows itself in certain happy and homely illustrations which he occasionally brings out with an obvious relish; for in his 'Rhetoric,' he shows a hearty appreciation of the importance of a good use of figurative language, both in writing and preaching. There is real satiric humour in the following example of ambiguity in the use of language, which we shall take the liberty of extracting from his 'Logic' (seventh edition, p. 354), though it is not used in the book under review.—

"EXPECT.—This word is liable to an ambiguity, which may sometimes lead, in conjunction with other causes, to a practical bad effect."

Here follows an example.—

"Hence, when men of great revenues, whether civil or ecclesiastical, live in the splendour and sensuality of Sardanapalus, they are apt to plead that this is *expected* of them; which may be perhaps sometimes true, in the sense that such conduct is anticipated as probable; not true, as implying that it is required or approved."

This might have been delivered from a certain Dublin pulpit in the days of George the First and George the Second.

Let us endeavour to find an illustration or two, in this book of Whateliana, to bear out our praise. The true trope, be it observed, is at once useful and an ornament,—it strengthens while it adorns. The writer who is properly master of tropes is like the housewife of old days who got her household labour done by fairies. Here are a few examples:—

"The vulgar are apt to conclude that where a great deal is said, *something* must be true; and adopting that lazy contrivance for saving the trouble of thinking, spitting the difference, imagine they show a laudable caution in believing only *part* of what is said. This is to be as simple as the clown who thinks he has bought a great bargain of a Jew, because he has beat down the price from a guinea to a crown for some article that is not really worth a groat."

"Falsehood, like the dry-rot, flourishes the more in proportion as air and light is excluded."

"Truths dangerous indeed; Yes—and so are meat and drink; but who will therefore resolve to perish with hunger?"

"Unless the people can be kept in total darkness, it is the wisest way for the advocates of truth to give them full light."

"As a child's father may be some mighty sovereign, or an eminent statesman, poet, philosopher, or warrior—one whose life is of importance to millions, or whose fame spreads over half the globe; and yet be regarded by the child, who has but a very faint, if any, conception of all this, merely as *his father*; so our knowledge of God is almost entirely relative.—He is revealed to us, not as He is in Himself, but, chiefly as He is in relation to ourselves."

"Human teaching in religion is highly useful so

long as Scripture proof is readily produced. It bears the same relation to Scripture, that what is called paper-currency does to gold and silver. Its sole value lies in the knowledge that it is convertible, on demand, into the precious metal it represents."

"When people have resolved to shut their eyes, or to look only on one side, it is of little consequence how good their eyes may be."

"There are many now who, while professing belief in the Divinity of Christianity, yet mix up with it other ideas which virtually nullify that belief. 'Christ,' they will say, 'was an inspired prophet, and so was Mahomet, and Dante, and Luther, and Milton, and a multitude of others. They had all the Divine spark within them—all had great missions to accomplish,' &c. And thus the ideas of genius and of Divine inspiration are confused together; and by raising others to the level of the Founder of our faith, they virtually degrade Him. They thus imitate the trick of Morgiana in the *Forty Thieves*, who, when she perceived one door marked with red chalk, immediately marked all those on each side, so that the mark ceased to be a distinction."

These are *bons-mots* in their way,—a praise which would not be thought slight, if much "comic" writing had not made men forget that wit is an essentially respectable faculty, largely used by such writers as Plato, Cicero, Tacitus, Bacon, and Montesquieu.

We will not perform the invidious task of pointing out such *dicta* as appear to us less excellent, or such as we think we could trace to sayers of good things long anterior to Archbishop Whately. Nor will we step out of our merely literary province to discuss ecclesiastical subjects with an author with whom we are only concerned as a successful popular writer on secular subjects. Future volumes will probably contain matter that has less direct connexion with theology.

The Poetical Works of William Cowper. Edited by the Rev. R. A. Willmott, Incumbent of Bear Wood. Routledge & Co.

COWPER may be almost reckoned as a contemporary poet, for there are yet sojourners among us who remember his features, and can recall the echoes of his voice. Nevertheless, a hundred and twenty-three years had passed away, on the 26th of November, since the poet was born at Great Berkhamstead, in the year 1731. Elijah Fenton had just ceased to sing; Dr. Watts was still singing; Hughes was writing tumid nonsense; the roar of Swift was reaching our fathers from beyond the waters; Tickell was courting a gentle muse; Ambrose Phillips was happily translating, and William Broome was following the same facile example; Young had just produced his 'Revenge'; Gay was gradually dying at the Queensberries; Allan Ramsay was creating delight by his *Bœotian Pastorals*; Aaron Hill was writing easy lines, and abusing Pope; Tom Warton was at the height of his reputation for taste and critical excellence; Somerville was still elegant and tipsy; Mathew Green had his 'Spleen' in manuscript; Savage was startling the public ear; Thomson's 'Autumn' was a year old; Pope was elaborately at work with his 'Essay on Man'; and the official laurel was resting on the brow of Colley Cibber! Such was the state of our English Parnassus when the child was born who was destined to win a name among the deathless sons of song.

If there be something suggestive in this poetical complexion of the times to which we refer, so is there in the political aspect of that day, as compared with the present. In the year of Cowper's birth, Oglethorpe stood up in the House of Commons, and expressed his satisfaction that a friendly union between England and France was not likely to exist. Half a century later, Sir James Harris (Malmesbury) pronounced such an union unnatural! But we

have now better tastes and wiser judgments, both in politics and poetry; and we would now no more indorse the sentiment of Oglethorpe than we would accept for poetry the verses of Yalden.

Mr. Willmott has edited the work before us with zeal, discretion, modesty, and success. Nor was the task without difficulties. The reverend editor notices those which arose from the poet's neglect or carelessness of punctuation. In this respect, Cowper reminds us of the Rugby boy who, having completed his Greek exercise, scattered the accents "promiscuously, for the look of the thing." Cowper, indeed, did not insert points for show, but he stoutly denied their use "unless to direct the voice."

We pay no slight compliment to this volume when we say that the text appears to have been as carefully "watched," if we may so speak, as that of Young, by the painstaking editor of that poet's complete works, James Nichols. The notes are few, but always explanatory or illustrative. Of the biographical and critical sketch prefixed, we may say that it is executed in Mr. Willmott's happiest manner;—not that we always agree with that gentleman's criticisms,—a liberty for which we are the less bound to apologize, as Mr. Willmott does not always agree with himself. Thus, at page xlvii, he remarks, that, "as Cowper is among the most various, he is also one of the most original, of our writers." This is singularly at variance with what Mr. Willmott has recorded of the poet, in the 'Journal of Summer Time in the Country.' At page 211 of that pleasant little work, Mr. Willmott says, "Titian produced *compositions*; Constable *copies*. Not a spot of moss escapes him. . . . The merit of Constable is, in some degree, that of Cowper." Is not this "rue, with a difference"?

We agree with the editor in his estimate of this poet's 'Homer,'—that it is faithful, but harsh. Cowper himself cared for little praise that was not awarded to it. We have met with many who quite as highly appreciated it; but opinions vary, and Dr. Chalmers headed those admirers of Milton who maintained with the poet that 'Paradise Regained' is superior to 'Paradise Lost.' Mr. Willmott, comparing Cowper's Homer with Pope's, says that "no reader of Homer will deny that Pope modernized the costume and the furniture into the flowered gown and the lacquered chair;"—we deny it most emphatically. Pope's Greeks, indeed, are not Homer's living Greeks, but they are fine scenic representations of the natural men. Had it been said that the Greeks of "Anacharsis" Barthélemy are in flowered gowns, and seated in lacquered chairs, the assertion might pass undisputed; but we cannot allow that Homer's chiefs in Pope's hands were metamorphosed into macaronis and coffee-house captains. When we saw Charles Kemble first dressed for "Orestes in Argos," so correct was the costume, that we recollect remarking, that he looked like one of Pope's Greeks—Greek in everything but language and feature.

If Mr. Willmott has varied in his opinions with regard to Cowper's claim to be considered an original poet, he has not changed in his view of Cowper as a prose writer. He has before said of the poet's letters that they reflect the feature of the writer, as face answers to face in water. So in the sketch preceding the poems, in this volume, he remarks, that "Cowper loved 'talking letters,' and wrote them; and if the talk be commonly of himself, who does not rejoice in the gain"?

The personal character of Cowper is touched upon by Mr. Willmott delicately and gracefully; but all the delicacy and grace in the world cannot conceal the fact that the canker of selfish-

ness affected him. Sir Egerton Brydges says of him, in the 'Recollections of Foreign Travel,' vol. i. p. 242, that "his taste lay in a smiling, colloquial, good-natured humour; his melancholy was a black and diseased melancholy, not a grave and rich contemplativeness." This is true; and Cowper, even when least unhappy and most busy in his garden, was far away from Pliny and Archbishop Sancroft, who, in their several and widely different ways, loved the life which they could spend *sub Jove*. Self-love was at the bottom of much of Cowper's infelicity; and, as Mr. Willmott has remarked, "the self-love of Milton was not less than Cowper's;" and the self-love of Cowper rendered him uncharitable to others. "There is some illiberality," says a recent writer, "in his declaring that the various occupations of other and more active men are either frivolous or criminal. Cowper patiently enjoys holding the ravelled thread for ladies to wind on to their bobbins; but he sneers at the party who sits down to chess or stands up to billiards. He will praise air and exercise, if you will only take them in company with him, in covered walks, beneath 'an obsolete prolixity of shade'; but if you enjoy your air and exercise in field sports, you are more ignoble than your groom, and a greater brute than the victim you pursue." Cowper, in short, could denounce "chess" as roundly as Bishop Beveridge did, because he disliked the game. He called it immoral; but when the o'ertaxed mind needed relaxation, he prescribed his own recipe:—

The understanding takes repose
In indolent vacuity of thought,
And sleeps and is refreshed.

Here are further illustrations of his humour. It is only necessary to premise that Cowper, in his younger days, had plighted his troth to his noble cousin Theodora; but the suit was not sanctioned by the lady's father, and the lovers parted, "never to see one another again."

"On Cowper the shock was faint and transitory; he had the wit of the Temple to fall back upon, and in the early spring of 1756 he recovered sufficient gaiety to banter old bachelors in the pages of the 'Connoisseur,' and to set forth the pleasant mischiefs of Miss Diana Grizzle, who utterly spoiled the only suit of a poor celibate by pinning the skirts of it together with a red-hot poker. It may be doubted if Cowper's love for his cousin had ever ripened into any feeling, richer and more glowing than the admiration of an affectionate and rather changeable temperament. 'I still look back,' he told Lady Hesketh, in mature life, 'to the memory of your sister, and regret her; but how strange it is, if we were to meet now, we should not know each other.' Did a love, worthy of the name, ever think or speak thus? * * Nothing in the history of poets is more touching than her tenderness and faith. Unseen she watched, and cherished, and cheered the beloved of her youth; now she increased his comforts by an enclosure of money; at another time, she pleased him by some elegant gift. 'Dear Anonymous,' he exclaimed, 'is come again.' But Southampton-row must have faded in thick shadow, when he breathed a grateful prayer for his benefactor, and said: '*God bless him!*' How could he unpack the parcel and take out the snuff-box of tortoiseshell, with the familiar landscape on the lid of it, and the figures of the three hares, and read 'The Peasant's Rest,' and the names of 'Tiney,' 'Puss,' and 'Bess,' without being sure that only womanly tenderness could have shown itself with such delicacy and grace?"

Mr. Willmott makes a good and sensible estimate of Newton, the curate of Olney. The poor poet was hardly more fortunate with his dissenting Amphitryon, Mr. Bull, who gave to a despairing man the task of translating Madame Guyon's Hymns. The familiarities and the inappropriate metre of these hymns have not escaped Mr. Willmott's notice; and he very justly says of them, that they recall "not only the music, but the themes of Shenstone's ama-

tory pastorals." The accomplished editor might have drawn a broader contrast. Take the following, for instance, from one of these hymns:—

Ye lambs, who sport beneath these shades,
And bound along the mossy glades;
Be taught a salutary fear,
And cease to bleat when I am near:
The wolf may hear your harmless cry,
Whom ye should dread as much as I.

Now, in the very year, we believe, of Cowper's birth, tuneful Travers put to never-dying music the famous 'Haste, my Nanette,' of Prior, who would almost seem to have gone to the same fountain, or menagerie, as Madame Guyon.—

None but my sheep shall near us come,
Venus be prais'd, my sheep are dumb.
Great God of Love, take thou my crook
To keep the wolf from Nanette's flock;
Guard thou the sheep to her so dear,
My own, alas! are less my care.
But of the wolf, if thou'rt afraid,
Come not to us to call for aid;
For with her swain my love shall stay,
Though the wolf stroll, and the sheep stray.

In conclusion, we congratulate the religious and poetical public on the valuable contribution which Mr. Willmott has made to their cheap literature in this reprint of Cowper.

A History of the City of Dublin. By J. T. Gilbert, Hon. Sec. Irish Archaeological and Celtic Society. Vol. I. Dublin, M^cGlashan; London, Orr & Co.

Few cities present a finer subject for the research and illustrative qualities of a purely local historian than Dublin. The metropolis of Ireland, ancient in foundation, peopled by various races, has annals which are rich in suggestive variety. For centuries the seat of government, with a Legislature and a University, Dublin has always exhibited such phases of social life as might be anticipated in the capital of a lively people with quick wit and a passionate temperament. Its history is in some important respects more characteristic of the Irish race than that of Edinburgh is of the Scotch. Greater contrast of social elements can be traced in Dublin on account of the protracted antagonism between the Anglo-Norman and the Irishry, as well as the unhappy religious feuds of still more recent times.

Nor has that interesting city been left without literary notice, as the works of Stanihurst, Ussher, Harris, Archdall, Monck Mason, and others attest. In 1818 two large quarto volumes, known as 'Whitelaw and Walsh's History of Dublin,' were published in London. This work was originally begun by Mr. Warburton, the Keeper of the Records in Dublin Castle, and it was afterwards completed by the two clergymen whose names are on its title-page. We do not concur with Mr. Gilbert's depreciation of that work; it contains much useful and entertaining matter not to be found elsewhere. Its history of Dublin Castle and its memoirs of the various families of Dublin are particularly valuable; and the general reader would find much instruction in its pages.

The social vivacity of the people of Dublin is seen in the character of their amusements. Music, masquerades, and debating societies were in the last century favourite sources of recreation in the Irish metropolis, and to this day music is cultivated in Dublin with remarkable success. In giving the literary traditions of Fishamble Street, Mr. Gilbert thus describes a musical club founded by the late Duke of Wellington's father.—

"At the Music Hall were held the meetings and concerts of the 'Musical Academy,' founded by Lord Mornington in 1757, and which in four years, by loans of small sums of about four pounds each, relieved nearly thirteen hundred distressed families. This Academy comprised 'persons moving in the highest spheres of society,' all professors or mer-

cenary teachers of the art were strictly excluded. Their meetings were held at the Music Hall in Fishamble-street, and their proceedings were regulated by a body of statutes: they were divided into three degrees—Academics, Probationers, and Associates. They met once in each week for private practice; once in each month they held a more public meeting, to which a select number of auditors were admitted by tickets; and once in each year they made a public display of their talents for the benefit of some charity, to which all persons who paid were admitted. On these occasions crowds were naturally attracted, as well by the talents as by the consequence of the performers. They saw on the stage all rank obliterated, profession disregarded, and female timidity overcome in the cause of charity; while noblemen, statesmen, lawyers, divines, and ladies, exerted their best abilities, like mercenary performers, to amuse the public."

The rules of the Society were remarkable.—

"1. This Academy shall be composed of ladies patronesses, and of ladies and gentlemen. Vocal and instrumental performers of music only to be elected by ballot.—2. The male academics only shall have a right of suffrage in the Academy.—3. All power of enacting, altering, or annulling, any statute or statutes shall rest solely in male academics.—4. No public mercenary performer, professor, or teacher of music, shall ever be admitted into any rank of the Academy on any account whatsoever.—5. Ladies and gentlemen vocal and instrumental performers shall be admitted by ballot under the title of Probationers.—6. Gentlemen instrumental performers shall be admitted by ballot under the title of Associates.—7. The ladies patronesses, female academics, and probationers, male probationers, and associates, shall be exempt from all expenses of the Academy, but obliged to an exact conformity to their statutes."

It flourished with great success for several years,—the beauty and female fashion of Dublin being distinguished in its performances. With our more staid notions of propriety, the public exhibition of lady performers in England has always appeared at our side of the Channel to partake too much of an exaggerated character; and our class prejudices and national reserve are opposed to it.

Another form of personal display, kindred with theatrical amusement—the Debating Societies—have always flourished in Dublin. Mr. Gilbert describes one of the best of them.—

"The 'Constitutional Free Debating Society' began to assemble in the Music Hall in the year 1771; their debates commencing at eight in the evening, and generally terminating at ten. The speaker stood while addressing the meeting, and any member who broke silence was liable to expulsion. Crowds of the most fashionable persons attended to hear the orations, and seats were provided in the orchestra for the ladies. The number of members exceeded eight hundred, and a medal, value four guineas, being awarded every fourth evening to the author of the speech most highly approved."

—Only think of "eight hundred" members in a spouting club; and medals awarded every fourth evening! Masquerades, also, were particularly patronized in the last century at Dublin. Society was certainly very unreserved when the first ladies in the Irish metropolis thus figured on St. Patrick's Day, 1778.—

"Among the female characters who deserve to be mentioned were—Mrs. Gardiner in the character of Sestina the Opera singer, a most inimitable mask; she sung one of Sestina's songs. Lady Ely, as a washwoman. Mrs. F. Flood, a child and doll. Mrs. Crofton, a young miss, well dressed and characteristic. Miss Gardiner, as a Florentine peasant. Miss Graham, a female savage, and afterwards a dancer. The two Miss Normans, witches. Miss Evans and Miss Saunders, two Dianas. Miss Beston as a nun. Mrs. Trench as a housemaid. Miss Blakeney and Miss Whaley as Night. Miss O'Connor, Night. Miss Stewart, an Indian Princess, with a great quantity of jewels. From seven o'clock in the evening till twelve at night, the following houses were open to receive masks: Lord Roden's, Mr. Rowley's,

Mr. Aylmer's, Mr. Kilpatrick's, Mr. La Touche's, Lady Arabella Denny's, and Counsellor Davis'. At these several houses the masks were entertained with wine and cakes, and among the rest there was an inimitable old beggarman, who excited charity in the breasts of the compassionate; he was dressed in a rug cadow, and liberally supplied with viands from the fair hands of Nuns, Dianas, and Vestals."

At the same masquerade, Lord Glerawly went as "a sideboard of plate"; and we have heard of another in Ireland, where one of the characters appeared as a milestone, while his friend tried to go as a haystack, but could not squeeze admission through the door.

No capital city in Europe presented stranger contrasts of class than Dublin in the last century. Much as we have read of the jail horrors before the time of Howard, some of those recorded in this volume appear truly horrible. Speaking of the year 1730, Mr. Gilbert writes:—

"In both Newgate and the 'Black Dog,' the gaoler carried on an extensive trade by selling liquors to the inmates, who, on entering the latter place, although for only one night, were immediately called upon to pay 2s. 2d. for what was styled a 'penny pot'; prisoners refusing to comply with this demand were abused, violently beaten and striped; and persons not having sufficient money to pay the impost were dreadfully maltreated and their clothes seized and sold to supply the required funds. In the 'Black Dog,' there were twelve rooms for the reception of prisoners, two of which contained five beds each; the others were no better than closets, and held but one bed each. The general rent for lodging in these rooms was 1s. per night for each man, but in particular cases a much higher price was charged. It frequently happened that four or five men slept together in one bed, each individual still paying the rent of 1s., which at the close of the week was collected by Mrs. Hawkins, wife of the gaoler. Prisoners unable to meet these demands were immediately dragged to a damp subterranean dungeon, about twelve feet square and eight high, which had no light except that which was admitted through a common sewer, which ran close by it, carrying off all the filth of the prison, and rendering the atmosphere almost insupportable. In this noisome oubliette, called the 'Nunnery,' from being the place where abandoned females apprehended by the watch were regularly lodged, frequently fourteen and sometimes twenty persons were crowded together, and there robbed and abused by criminals, who, although under sentence of transportation, were admitted to mix among the debtors; and if any person attempted to come up stairs in the day time, to obtain air or light, he was menaced, insulted, and driven down again by Hawkins, or his satellite, Martin Coffey, the turnkey of the gaol."

And what extortion is shown by the following Parliamentary paper.—

"An Estimate of the Yearly Chamber Rents, Fees, and Perquisites, received by John Hawkins, as Keeper of Newgate, and the Black Dog Prison.

	Per Annum.
Chamber rent, at 7l. 16s. per week	£406 18 0
Fees on persons committed by the Watch and Staff at three per night, and 1s. 6d. each ..	82 2 6
Fees on persons committed on commitments from Justices of the Peace, at least 1,000 per year, at 4s. 6d. each	225 0 0
Fees on persons committed on warrants from ditto, moderately computed at a medium of 1,000 per year, at 2s. 6d. each	125 0 0
Fees on persons committed by the Sheriff, at two per week, many whereof are charged with ten commitments; but allowing at a medium three commitments to each person	104 0 0
Fees on persons tried for murders, treasons, felonies, assaults, as well in the city as county of Dublin, at 240 indictments in the year, allowing he remits one-fourth of his fees at the King's Bench	60 0 0
Fees on persons tried at the Quarter Sessions, at the like number	60 0 0
The benefit of his ale-cellar, at 360 barrels yearly, at 5s. profit on each barrel, not including his profits on wine, brandy, rum, and other liquors	90 0 0
Salary from the city at	10 0 0

Total £1,163 0 6

Besides infinite extortions on all the above articles, and on Crown prisoners, for permitting them to lie in the Black Dog gaol, and not turning them over:

to Newgate, and loading them with irons; premiums for stolen goods, and other private perquisites, peculiar to his employment, not to be computed or valued."

And it is further stated, that until 1773 no important remedial steps were taken to terminate such a lazaret-house, which was always spreading contagious fever.

Necromancy seems to have been much in vogue at Dublin at a comparatively late period. Mr. Gilbert's account of the notorious Whalley is curious; and we can easily conceive that an impressionable race like the Irish were often duped by such impostors. Mr. Gilbert writes:—

"Necromancy and astrology, we may observe, were practised by some natives of Ireland before the era of Dr. Whalley. Sir John Harrington, in the reign of Elizabeth, states that the English soldiers were much daunted by the belief that the Irish possessed various magical powers; and he adds, that it was a great practice in Ireland to 'charm girdles and the like, persuading men, that while they wear them, they cannot be hurt with any weapon.' Edward Kelly, seer to the famous Dr. Dee, was admitted to be the second Rosicrucian in the sixteenth century, in recognition of which he was knighted at Prague by the Emperor Rodolph, who, with the King of Poland, was frequently present at his incantations. The physician of Charles II. tells us that when that prince was at Cologne in 1654, the Bishop of Avignon 'sent him out of France a scheme calculated by one O'Neal, a mathematician, wherein he predicted, that in the year 1660, the King should certainly enter England in a triumphant manner; which, since to our wonder,' adds this writer, 'we have seen fulfilled, all the people triumphantly rejoicing.' Harvey, 'the famous conjuror of Dublin,' is stated to have possessed 'the art of conjuring in Dublin, longer, and with greater credit than any other conjuror in any part of the earth. He was tall in stature, round shouldered, pale visaged, ferret-eyed, and never laughed."

It is in such contracted phases of life that a really national Irish novelist would find the colour and circumstantiality requisite for realizing past times in Ireland. Mr. Gilbert says of the old Law Courts at Dublin:—

"The longest trial recorded to have taken place in these Courts was the case in ejectment of James Annesley against the Earl of Anglesey, which lasted from the 11th to the 25th of November, 1743, and furnished Walter Scott with the groundwork of his novel of 'Guy Mannering.'"

The romantic circumstances of that extraordinary case ought to have been noticed by the author, as the Houses of Lords in England and Ireland were at issue on the validity of a marriage,—whereby one branch of the Annesleys was ennobled in Ireland and illegitimized in this country. There are several other striking cases in the annals of the Irish Law Courts suggesting plots for novels, "stranger than fiction"; but most people think we have been overstocked with Irish romances.

Scattered through this volume are many curious anecdotes that have escaped former collectors. The following particulars about Quin, the actor, appear to be authentic, and have been overlooked by some who have written of him.—

"Alderman Mark Quin, of High-street, was one of the most wealthy residents in St. Michael's parish, the plate, money and documents of which appear from the Church records to have been kept at his house, until in a fit of jealousy at the conduct of his wife, he cut his own throat, in 1764, 'with a new-bought razor between the hours of nine and ten in the morning, in or near the Chapel of St. Mary, in Christ Church.' Alderman Quin left an estate of about one thousand per annum to his son James, who studied at Trinity College, Dublin, was called to the Bar in England, and married a lady whose husband was reputed to be dead, having not been heard of for many years. By this lady, Quin had a son called James, born in 1693, some time after

whose birth Mrs. Quin's former husband returned and reclaimed his wife. Quin's illegitimacy having been established, his father's estate passed to the Whitsheds, the heirs-at-law, and the young man, being left on his own resources, appeared in the character of 'Abel' in the 'Committee' at Smock-alley theatre in 1714, and afterwards became one of the most eminent actors of his day. * * It was believed that the Whitsheds, who, as noticed at page 147, were eminent lawyers, used much legal chicanery to exclude young Quin from the enjoyment of his father's property, and when Judge Whitshed rendered himself obnoxious by persecuting Swift's printers, the suicide of his ancestor was recalled in an epigram beginning:—

I am not grandson of that ass Quin;
Nor can you prove it, Mr. Pasquin;
And also in the following lines:—
In church your grandsire cut his throat;
To do the job too long he tarried;
He should have had my hearty vote
To cut his throat before he married.

Possibly, the moroseness of Quin's manners may have arisen from a sense of injustice arising out of the facts here recorded.

Referring to another theatrical character, Edwin, Mr. Gilbert, in his account of St. Werburgh's Church, writes:—

"On an upright slab in the middle of St. Werburgh's churchyard is inscribed an epitaph on John Edwin, an actor of Crow-street theatre, who died in 1805, from chagrin at the criticism of the author of the 'Familiar Epistles on the Present State of the Irish Stage.'"

In Whitelaw and Walsh's 'Dublin,' the epitaph here alluded to, is printed at full length; and so fierce an inscription was probably never before or since cut on stone. "*Died of chagrin*" is not the term used in the epitaph, but a phrase far more criminatory of the severity of the author of 'Familiar Epistles.'

Though we should have preferred that Mr. Gilbert had arranged his facts more consecutively, we have been much interested with the originality and variety of his work. His research and reading are beyond dispute; and his performance leads us to expect still more from him as an authentic illustrator of the domestic life of Dublin in bygone days. Other writers in fiction and history will be indebted to him for the indication of much matter that might otherwise have remained unknown to them. The continuation of his work, especially the history of Dublin Castle, will be looked forward to with pleasure; but we must impress on him the necessity of foot-notes, and a closer reference to his authorities.

Edward Irving : an Ecclesiastical and Literary Biography. By Washington Wilks. Freeman.

Mr. Wilks is justified in stating that the fame of Edward Irving has fallen into a neglect disproportionate with the notice challenged by it scarce a quarter of a century ago. His works are seldom met in libraries,—his periods are sparingly resorted to for the purposes of quotation,—his doctrines (if doctrines they can be called) have been modified, and filtered, and appropriated with exceptions by a fanciful class of religionists, till the prophecies of Hatton Garden and the ravings of Newman Street are forgotten in the splendours of Gordon Square. A solemn and sincere eulogy was, at the time of his decease, spoken at his tomb (as it were) by Mr. Carlyle,—but no biography of him has been attempted, nor, indeed, seems to have been wanted. This neglect has pained Mr. Wilks, whose father's friend Edward Irving was; and he professes in the small volume before us to supply the deficiency.

Relatives are still living, however, it is intimated, who might be pained by any close or minute revelations concerning the life and career of the strange and eloquent Scottish clergyman. Mr. Wilks's book, therefore, resolves itself into

what is not a memoir so much as a panegyric with liberal quotations from the writings and reported sermons and addresses of Irving.—We are glad to receive such a *cento* of specimens of that quaint, gorgeous, tender, and appalling poetry (for poetry it was) which in its day so startled the wits and fashionable personages of London, and the Kirk Elders of Scotland. There is nothing of similar quality in the range of modern English literature. Turgid though these passages be—audacious in the orator's attempt to reproduce the forms, phraseologies, and direct menaces or consolations which we find in the prophecies of the Old Testament—inaudibly familiar and indiscreetly personal in certain of their appeals,—they are still peculiar and precious as utterances of genius. Whatever be the ecclesiastical verdict concerning them,—however the analyst may discern in them a strain of theatrical exaggeration, as well as of solemn enthusiasm,—there are few persons whom their imagination will not enthral, whom their fervour will fail to warm, whom their power will not elevate. Mr. Wilks bears testimony to the potency of their spell in a manner which is more significant than it is satisfactory. He, too, will be stilted, oracular, an interpreter of prophecies as well as a reporter of them,—by way of suiting style to subject. Then his faith is without limit. He will not admit that overwrought feeling and over-strained enthusiasm took the forms of mental distemperature in Irving's later days and proceedings. He accepts, by way of gospel testimony, and not as apocryphal, the narrations and deductions put forth by the preacher himself in relation to the "Unknown Tongues" (so called),—the outbursting of which cut short his career and separated him from the Church of his country. We have no right to scorn these frenzies as passing follies, the like of which can trouble us no more,—since we have seen, only the other day, persons of intellect, piety, and learning willing to sit at the feet of an American Rapper, who, for the hire of half-a-guinea, would open the spirit-world to them! In periods of high civilization, which are also periods of high nervous excitement, such insanities will be always prevalent. The most generous and sincere of spirits will not be exempt from the infection; but after they are passed, let us speak gently of them as insanities,—let us not, because of the generosity and sincerity of their victims, essay to find in them discoveries ennobling Man's spiritual progress. So far from adopting any such course, Mr. Wilks endeavours to get sense on his side by asserting that the anxiety of the gifted and intellectual to learn something concerning the matter was great; this being exemplified in the place chosen by Irving for the publication of his history of the phenomenon. This was a secular periodical in some vogue. Mr. Wilks is unfortunate in his appeal. To ourselves, Irving's choice of the medium of communication in "question speaks with decisive and painful emphasis. Divine inspiration selecting for its mouthpiece the organ of party scurrility and literary scandal that scarcely kept at a legal distance from prosecution! (for such was then *Fraser's Magazine*),—is there not in such a step an incoherence and an indecency which must stamp the chooser as knavish or callous, or else as bewildered past the power of discerning fit from unfit, right from wrong, devout from blasphemous, holy from unclean? We will not illustrate the kindred disregard of propriety which Irving's record itself displays,—the place of its publication sufficiently indicates, to our thinking, in what manner of spirit it was put forth.

Our illustration of Mr. Wilks's undiscerning faith in his hero has led us on so far that we cannot—and indeed need not—return upon his

slender narrative, save in a few words. The early days of Irving in Scotland—his ill success as a preacher there—his resolution to embrace the career of missionary service abroad—his unexpected summons to London—and the *furor* which his first pulpit displays excited here, are noted in the inflated style on which comment has been made. The end of his career is better told than its beginning,—and it may be added, that there is no reading this volume, imperfect as it is, without interest, admiration, and sympathy. We must recognize the nervous and original eloquence of a man like Irving,—we must feel a respectful commiseration for his aberrations, and a deep sadness as we watch cloud and storm gathering round his career,—without in one point subjecting ourselves to him as to a teacher or counsellor,—without imagining, like Mr. Wilks, that though forgotten by many, the man of genius influenced a few to those good deeds which will yet bear good fruit in the worlds of faith and of morals.

THE WAR.

THE War has suggested to Mr. F. Mayne the compilation of *A Life of Nicholas the First, Emperor of Russia; with a Short Account of Russia and the Russians* (Longman & Co.).—This is an unsatisfactory publication. The writer assumes that his work—which is partly a reprint—"brings into a focus the multifarious views and opinions that are scattered throughout innumerable volumes,"—and adds, with incautious ostentation, that "the value and extent of the authorities" he has consulted "will be discovered on perusal." Now, these "innumerable volumes" and these authorities of so much "value and extent" are reducible to a very limited collection of well-known travels, four or five newspapers, and other periodicals, one or two historical fragments, Alison's 'History,' a popular Cyclopædia and some compiled books by writers who are quite as little entitled to be named among original authorities as Mr. Mayne. So much display in the Preface, therefore, is injudicious, since it suggests an idea which is not confirmed "on perusal." Moreover, the title-page contains a misnomer. The work is by no means a life of Nicholas the First. It presents only a general sketch of the Czar's career,—derived, in a fragmentary shape, from accounts which have been cut up in paragraphs by almost every cheap periodical and provincial newspaper. There is no attempt made to elicit the secrets of the family revolution, by which the Emperor came to the throne instead of his brother;—there is no criticism on the Imperial version of the story;—the attendant massacres are hurriedly noticed;—and there is not in the whole volume a page of characteristic, original or picturesque detail. Indeed, Nicholas the First occupies only a small share of Mr. Mayne's attention. No sooner is the Czar seated under his purple canopy than his biographer flies off at a tangent to the foreign policy of Russia, which he pursues through several prolix chapters, that contribute nothing towards the professed object of the compilation. It is true that there is a personal connexion between the mind and plans of the reigning Emperor and the politics of Turkey, Persia and the Caucasus during the last quarter of a century; but the treatment which Mr. Mayne bestows on these topics is such as to ignore entirely this interesting line of investigation. With reference to the Circassian War the tale is here repeated, of Schamyl causing his own mother to be flagellated; but it would have been well if, for this statement, the writer had quoted one of his "valuable authorities." However, he appears chiefly inclined to the merest generalization. A long paraphrase on the Polish In-

surrection is introduced, in which, by way of relief, we find notes of an interview held by the Czar with a deputation of Poles, to whom he said, "You have wished to make me a speech; but, in order to spare you a lie, I have not thought fit that this speech should be addressed to me. Yes, gentlemen, I say—to spare you a lie."

In this 'Life of Nicholas the First' five lines are given to his visit to London in June, 1844. In fact, Mr. Mayne appears anxious to keep as far as possible from the subject of his memoir. He could not, indeed, avoid recapitulating the conversations between Sir Hamilton Seymour and the Emperor; but soon afterwards quits St. Petersburg to abridge, from newspapers, a narrative of the negotiations and of the War, from Prince Menschikoff's mission to the Battle of Inkermann. It is only after this prelude, which occupies two-thirds of the book, that we have two short chapters on the person, character and family of the Czar; and these chapters are principally composed of extracts from writers so familiar as Custine, Michelsen, Golovin and Sterling. Then follows the "short account of Russia and the Russians," and the volume is ended, leaving us to feel that Mr. Mayne has added nothing to the biography of the Czar. To write a life of Nicholas the First it would be necessary to examine judicially the circumstances of his accession,—to compare his acts with his professions,—to strip off his purple and exhibit him without theatrical disguise,—to recount the changes he has introduced into the administration,—to examine the sources of his personal and public influence,—to separate what is peculiar in his policy from what is the hereditary action of the Empire and the dynasty,—to follow him into social life,—and, in truth, to define his historical character and position. This it may be impossible for a contemporary to do, especially when a jealous vigilance closes against research the archives of Russia, and seals the lips of observers; but there are many degrees between the completion of a task and an entire failure, such as we must pronounce Mr. Mayne's volume to be.

With unworn enthusiasm and unwearying energy Mr. J. R. Morell plies his pen against the government and policy of the Czar. In *The Neighbours of Russia, and History of the Present War to the Siege of Sebastopol* (Nelson), he advises England to discard her trust in German alliances, to despise alike Hapsburgs and Hohenlindens, to arm Schamyl in the rear and flank of the Russians in the Crimea, and to rouse the "terrible elements of disaffection now existing" in the Czar's dominions. From these ideas he proceeds to a view of the actual scene of war on the Danube, the Black Sea, and the Baltic,—to describe the provinces which, consolidated with Muscovy, have swelled a petty state into an empire,—and to sketch the condition of Austria, Hungary, the North of Europe, and Persia—which, with the territories before mentioned, draw a geographical circle around that great despotic realm with the monarch of which we are now contending on the Euxine shore. Mr. Morell's narrative of the present campaign is written with spirit, and rendered additionally piquant by the sharp criticism occasionally introduced.

We have a number of miscellanies on subjects connected with the war. Mr. Daniel Moore has printed a *Manual for the Camp and the Hospital in the Crimea* (Kerby), which contains a series of religious lessons.—*Duty; or, the Heroes of the Charge* (Masters) is a celebration of the wonderful fight at Balaklava. Some of the lines are good.—*An Apology for War*, by J. Harcourt (Cotes), takes up the argument against the Peace Society,—while *The Peoples*

of Europe and the War in the East (Edinburgh, MacLachlan & Stewart) is an attempt, not very readable, to philosophize the politics of this battle of nations.—In *Kossuth: Six Chapters*, by a Hungarian (Hardwicke), we find little else than petulance and anger. It is an unseasonable and ill-considered diatribe.—Still less timely, and still less likely to be noticed is *A Letter to Col. Chesney. From an Old Brother Officer* (Booth). The writer suggests that the English should propose "a suspension of arms for three or four months," in order that negotiations might be resumed. This, were it listened to, would be bad news for our soldiers at Sebastopol, who know that every truce is taken advantage of by their enemies to prepare new methods of destruction.—We fancy that Mr. H. Coxwell will secure more attention for his ingenious pamphlet on *Balloons for Warfare* (Wesley), in which he sets forth plans for shelling Cronstadt, signalling by land and sea, and scattering revolutionary papers by aeronautic means.—Percy Vyvyan's *Letter on the Rank, Rights, and Recognition of the Officers of the Army of India* (Madden) also claims some notice. It is a vigorous and reasonable attack on a dictum attributed to the Duke of Wellington, "that no officer of the Company's army ought to be appointed to the chief command in the Indian armies."—*Philip O'Flaherty, the Young Soldier*, contains a number of letters describing personal adventures in the Crimea.

The Steam Engine for Practical Men, &c. By James Hann, and Placido and Justo Gener. Printed for the Authors.

The Steam Engine: its History and Mechanism, for the Use of Schools and Students. By Robert Scott Burn. Ingram & Co.

THE first work is intended solely for practical men, and contains rules—their immediate applications—and theoretical investigations of these rules; to which we find superadded numerous tables of extreme utility. We think, however, that upon some points the authors are disposed to speak too dogmatically. This is especially the case in that portion of the work in which they treat of steam-boiler explosions and of spheroidal steam,—the physical conditions of which the authors clearly misunderstand. They speak of spheroidal steam as "water flashed into an unusual quantity of elastic steam;" whereas all the experiments of Boutigny and others show that the vapour escaping from water in a red-hot vessel has little or no elasticity as long as the vessel containing it is at a red heat,—that it may be kept forming for a long time, in a perfectly closed red-hot vessel, without giving indications of pressure; but that it recovers its elasticity as the vessel cools, and then exerts all the force which is due to the high temperature it has acquired. This is a most important distinction, and leads to considerations very different from those entertained by the authors. They do not appear to be aware of the very remarkable condition induced in water by depriving it of the air which is always, under ordinary circumstances, combined with it. This air preserves the water in such a physical condition that it is employed with safety in all the practical uses to which this valuable liquid is applied. Deprived of this air, it becomes an explosive compound, and exhibits physical changes of the most remarkable kind. The scientific journals of Belgium and America would have furnished the authors with every information on this important subject.

In connexion with the Steam Jet, as it has been proposed to apply it for purposes of ventilation, especially in coal mines, many erroneous opinions are put forth. Mr. Hann, who

describes himself as "Honorary Member of the Philosophical Society of Newcastle-on-Tyne," should have made himself acquainted with the capital series of experiments, made by Mr. Nicholas Wood, on the comparative value of the Furnace and the Steam Jet in ventilating coal mines, published in the Reports of the Engineers and Coal-owners Association of Newcastle, when, we believe, he would have modified his conclusions.

With these drawbacks, the work before us is of practical utility.

The author of 'The Steam Engine,' for the use of schools, has done nothing more than collect and collate the best information on this important machine. Regarded as a history of the Steam Engine, the work is a very creditable one; but as descriptive of the details of the various applications of steam to machinery, it is defective. The work is illustrated with well-executed woodcuts:—these are quite sufficient to render clear the progress of discovery and the improvement of the Steam Engine; but for a work professing to describe the mechanism, far more exact details are required.

Mr. Burn appears to have carefully examined the historical works relating to the Steam Engine; and it is satisfactory to find him apporportioning, with much judgment, his praise to Watt, Hornblower and others, who had, about the same time, their active minds directed to the application of steam as a motive power.—For the intelligent youth, who desires an acquaintance with this important machine, the work of Mr. Burn will prove of much value. It is pleasingly written, and, as we have said, its illustrations are numerous, clearly executed, and correct.

The Island Empire; or, the Scenes of the First Exile of the Emperor Napoleon I. Together with a Narrative of his Residence on the Island of Elba, taken from Local Information, the Papers of the British Resident, and other Authentic Sources. By the Author of 'Blondelle.' Bosworth.

THE story of Napoleon, like that of Cromwell, that of Mary Queen of Scots, and that of Columbus, seems inexhaustible. We do not mean so much in its philosophy, for in this respect it will change with changing views and lapsing ages; but in its details and accessories. Scott fondly supposed that all was known in his time of the great conqueror and greater legislator; yet we have had a library of memoirs, revelations, and recollections published since his prejudiced and well-paid work appeared, and we seem to be no nearer to an end. Only a few months since, M. de Lamartine described the fall of the great Captain, his retirement to Elba, his intrigues in the island empire, his return to France, and the miracles of the Hundred Days, with a minuteness of romantic detail as remarkable as the passionate eloquence and pictorial power of the narrative. The poet filled a few glowing chapters with the eventful drama; to most readers it appeared as if that tale of Elba would never need—and never bear—to be told again. Yet, here we have a special monograph devoted to the subject:—a monograph, let us add, which we have read with deep interest, if not with the bated breath and bounding pulse which whilom witnessed to the fascination of the tale of Lodi and Marengo.

Our author has lived on the island—has had access to some private papers—has collected some local traditions—and for the completeness of his story has copied from the various published accounts. His book is unequal in merit and is badly arranged. The narrative, "like a crab," goes backwards. It is divided into three sections:—begins in the first with the Elba of

our author,—goes back in the second to the Elba of Napoleon,—and in the third recounts the ancient history of the island. In point of literary execution, the second part is the best; it is so immeasurably superior to Part First as to suggest a different hand.

Our readers will be glad to have as much as possible of Napoleon and as little as may be of our author. Napoleon was a great talker; he spoke like an oracle,—for when his passions did not blind him, he was the clearest-sighted man of his age. Many of his remarks read like prophecies, and have an interest as pressing in our time as when they were uttered. Here are some observations on Italy, which have a special significance.—

"The different manners and language of the Austrians, he said, rendered it impossible for them to become popular with the Italians, who had been flattered by the formation of the kingdom of Italy. This kingdom ought to have been sustained by England, as a matter of policy, to secure an ally; and it would equally be her policy to keep Naples separate from Sicily, as the latter, from being an island, would be entirely under the influence of England."

Later on he refers to the same topic.—

"He praised the Italians, contrasting them with the Germans, and declaring that he would always engage to beat thirty thousand Germans with twenty thousand Italians. The Germans were stupid, slow, and without pride; the Italians, quick and proud, had now become military. He had changed their habits, and abolished much of their degeneracy. All the young men were attached to the French from a similarity in many qualities, and from having served together in the army. Their minds were bent upon forming Italy into one kingdom. The government of France over them had been merely novel,—that part which was united to France in departments would afterwards have become a portion of Italy, so soon as certain of his projects should have been realized. The people knew that Italians enjoyed all the appointments in their government, and they had of late felt themselves as subjects of one kingdom from Piedmont to Naples. After this, it is impossible for them to be reconciled to the changes which have taken place—to the different language and manners of the Austrians, which disgust, and to the irritating demeanour of the King of Sardinia, the Pope, and the clergy."

Napoleon never forgot his Italian birth,—and he was as fervid a hater of foreign domination in the Peninsula as the most zealous of the Italians, from Dante to Mazzini,—except when the domination was his own and that of his puppet kings.

Every subject touched by the Exile seems illuminated by his genius. He saw from the immediate present into the immediate future with the clear out-look of Raleigh and Bacon. As in the case of these politicians, posterity has nearly always ratified his judgment of contemporary events. Here is Napoleon's view of the American war.—

"The conduct of England towards America, in the prosecution of the war, betrayed revenge. It would have been more generous to have made an equitable peace with her immediately after his abdication, and it would likewise have been more politic in England; for her voice in the Congress would have had more weight, had not so great a portion of her force been employed in this contest. The English had not occupied Louisiana, as he expected, nor had they acquired any considerable or permanent object. The Americans would gradually improve, and, in the end, Great Britain would be glad to make peace without any accession of power or territory. Her character, too, after standing so high in the eyes of the world, would suffer by the kind of warfare which was carried on against private property."

Here again is a far-reaching sarcasm on a certain alliance.—

"He criticised in a strain of great ridicule the nomination of the Sovereigns of Russia and Prussia to be Colonels of Austrian regiments. What child-

ishness! The circumstance bore no resemblance to those under which Frederick the Great paid a visit to the Emperor of Germany in Bohemia, dressed in the uniform of the Austrian new levies, as Frederick was a member of the Germanic Empire. These regiments, however, might be employed against their colonels."

Here is a paragraph on England,—with a moral in its tail for times when the question of a Foreign Legion is much in men's minds.—

"The Emperor paid many compliments to the English, expatiating in praise of their character, and requesting Colonel Campbell to obtain for him an English grammar the next time he went to the Continent. He declared that the imitation of Great Britain in the government and constitution of France was not feasible, and that it was impossible to establish, in the latter country, houses of parliament on the plan of those of England, as France did not possess an aristocracy similar to that of the English. He spoke with some warmth of the cessions made by France since his abdication—in the character of a spectator without hopes or interest—as showing an ignorance of the French character and temperament. The chief feeling of the French was pride and glory, and it was impossible for them to look forward with satisfaction and tranquillity while feeling such sacrifices. They were conquered only by a great superiority of number, but not humiliated. The population of France had not suffered to the extent that might have been supposed. *Their lives had been spared by the addition of Italians, Germans, and other foreigners to the army.*"

The French Revolution, as we pointed out not long ago, meant all things to all men. No two historians agree as to its causes. Dear bread,—the Printing Press,—Rousseau's Social Contract,—the pride of the aristocracy,—the weakness of the King,—and a score of other causes, have been assigned as its well-spring. Napoleon had his peculiar explanation.—

"There was no want of male population in France; the people of which are martial beyond any other in Europe, from their natural disposition, their Revolution, and their ideas of glory. Louis XIV., notwithstanding their sufferings during his reign, was beloved, because these feelings were gratified. It was the Battle of Rosbach which produced the Revolution in France, more than any other of the causes to which it was generally ascribed."

Napoleon was precise and exacting. Here is a trait worth noting,—for the great Emperor exacted francs from his mother as he took crowns from his enemies.—

"The evening was devoted to social amusements. The Emperor would play sometimes with his mother at chess, paying and exacting the stakes that were lost or won with great precision. On one occasion, having been the victor of several games from his mother, he was heard to say playfully,—*'Payez vos dettes, Madame.'* At these times plays were acted by the Princess Pauline, the ladies of the Court, and the officers of the Guard. A deserted barrack near the palace was turned into a theatre, and here were represented the plays '*Les Fausses Infidélités*' and '*Les Folies Amoureuses.*'"

Our author argues once more the question as to whether Marie-Louise visited Elba in secret with her son the King of Rome. The story, as he picked it up in detail, on the island, is this:—

"In all the memoirs of the Emperor it has been stated, that during his sojourn at Elba, a lady with a child came to the island for a short time, who was supposed by the islanders to be the Empress, but by persons better informed, to have been another lady, whose personal attractions and accomplishments had some time before fascinated him. Our host related to us the circumstances of this visit, and also the reasons which led him to his firm belief, that the lady in question was no other than the Empress Marie-Louise. At the beginning of August 1814, a Polish or German colonel, whose name did not transpire, arrived at Elba, and was immediately received by the Emperor, then residing at Marciana. Marie-Louise was at that time residing at Aix, in Savoy. The colonel remained only a few days, and then went away. Not long after this, a Genoese felucca,

the interior of which was fitted up in a luxurious manner, arrived at Porto Ferrajo, bringing a lady, a little boy, and the aforesaid colonel. In the course of the day of their arrival, the Emperor, accompanied by General Bertrand, Capt. Baillon, and my informant, started on horseback, as though for San Martino. Arrived at the cross-road where the roads to San Martino and Marciano branch off, the Emperor, continuing his route to the former place with General Bertrand, ordered his other two followers to wait at this spot for a carriage that would soon pass, and to desire the coachman not to proceed farther till his Majesty's return. On leaving, Capt. Baillon said to his companion—'Voilà, nous avons l'Impératrice à l'île d'Elbe!' The occupants of the carriage had not to wait long for the Emperor to join them, who, on riding up, entered the carriage, while General Bertrand was observed to speak to the lady with marks of extraordinary respect. On arriving at Procchio the party took boat, and proceeded to Marciana Marina, whence they proceeded to the Madonna, where tents were provided for their accommodation, our Captain being desired by the Emperor to give a bed in his own house to the Polish colonel, —a command with which the Captain complied, no doubt delighted at having an opportunity to display his cordial hospitality. The following day, as the child was playing about under the chestnut-trees, the Emperor came up to Doctor Fourreau, who was in conversation with the Captain, and asked him what he thought of the child. The Doctor answered, 'He appears to be much grown since I had the honour of seeing him at Fontainebleau.' The Captain is not sure whether he heard the words 'Sa Majesté' applied to the child, which would have placed the matter beyond a doubt; but his answer was evidently displeasing to the Emperor, who answered abruptly, 'Qu'est que vous chantez donc?' and turned away, leaving the poor Doctor almost in tears, and in a state only to be understood by those attendants who unfortunately fell under their master's displeasure. Turning round to the Captain, he said, 'How could I be expected to know that I was to be secret? A man has not the power of divination of a God.' These circumstances naturally provoked speculations; and, in addition to the facts, as the Captain asserts, that the pictures he had seen of the Empress and the King of Rome resembled the lady and her son, and that the age of the latter tallied with that of the King, have induced him to form the conclusion, which nothing can now alter. The Emperor, however, on seeing that the Captain had observed that the child called him 'Papa,' asked him what the Elbans thought of his visitors. The Captain answered, 'They think that Elba is honoured with the presence of the Empress and of your Majesty's son.' On which the Emperor rejoined, 'He may well be my son, and yet not the King of Rome.'

We incline more strongly than our author to reject the inference that the Lady and child were the august personages supposed. The Lady came from Malta,—and a gentleman who saw the child declared that it was not the King of Rome. Such a visit, however, has its own touches of romantic interest; and those who believe in the courage, the attachment, and the romantic tendencies of Marie-Louise—which we assuredly do not—may debate the question till the end of time.

Elba possesses a few relics of the Exile,—among which the most interesting is a collection of books.

"Amongst the other legacies left by the Emperor to the capital of his 'state of transition,' is a library of about eleven hundred volumes, some of which bear marginal notes in his handwriting. The collection consists of works principally of a military and historical character, a set of 'Moniteurs' bound up, translations of Latin and Greek classic authors, and occasionally some lighter productions may be found; Voltaire's works, grave and gay, Rousseau, and some elementary works on botany, mineralogy, and other branches of natural philosophy, procured evidently with the view of becoming acquainted with the produce of an island apparently designed, from its extensive, and at times even incongruous, collection, for studies of this nature. To obtain a knowledge of those things he wanted to know, the

great man did not disdain to begin from the beginning, and works destined to teach children seem to have been chosen for this purpose. It will be seen hereafter, that he expressed to Sir Niel Campbell his desire to become acquainted with the English language, and requested that officer to procure him a grammar. I found two French grammars of English, in coarse paper covers, labelled with a rough cipher N pasted on the back. These do not appear to have occupied, however, much of the Emperor's time, as most of the leaves are uncut. The only work that he seems to have perused in the prosecution of this study is one of those dully moral works calculated to combine instruction with amusement, but which generally fail in either object. The original English is placed side by side with a French translation, and the work bears the two titles, 'The Hundred Thoughts of a Young Lady,' —'Cent Pensées d'une Jeune Anglaise,' and purports to have been written by 'Miss Gillet.'

It is inferred by our author,—who is very ready to infer all sorts of generous things,—that these books offer conclusive evidence that Napoleon went to Elba in good faith, and without thought of a return to power. We will not argue the point here. We will simply express our disbelief in any such theory.

A Treatise on Infinitesimal Calculus; containing Differential and Integral Calculus, Calculus of Variations, Applications to Algebra and Geometry, and Analytical Mechanics. 2 vols. By B. Price, M.A. Oxford University Press.

OXFORD mathematics do not generally rank very high at the sister University of Cambridge. A wrangler, though perhaps more than thirty places below the senior, would be disposed to take offence if he were put on the same level as one of the select few who form the first class in mathematics at Oxford, and who are charitably supposed by supercilious Cantabs to be about equal to the Senior Optimes. Beyond Euclid, algebra and the elementary parts of mixed mathematics, the benighted Oxonians are thought to know little or nothing. As for the Calculus and its numerous applications, these are subjects of which they have only heard by distant report, and which it is questionable whether they could by any possibility be made to understand.

Let those who are inclined to indulge in such imaginings, take up Mr. Price's two volumes, and they will soon be convinced of their error. A more masterly production has never issued from the Cambridge Pitt Press—we might almost add, any press, English or Continental. As a complete exposition of the subject of which it treats, it contrasts most favourably with many of the meagre Cambridge text-books, which are mere digests of French works, drawn up in a shape to be more suited for cramming, than for thoroughly grounding the student in the principles of the science under discussion. Mr. Price's treatise, like that of Prof. De Morgan, has the stamp of originality very distinctly impressed upon it. Even facts and principles which are by this time common stock, are stated by him in an uncommon way. There is a lucid precision and a force, combined with a rich variety of illustration, such as we rarely find in English mathematical works. Mr. Price is determined that if the student does not thoroughly comprehend the principles upon which the Calculus is based, it shall not be his fault. Hence, after exhibiting them in one light, he sets them forth in another; and even in stating definitions, he assists the reader to understand and remember them by giving some account of their origin. His views on the importance of understanding definitions and axioms are so just, that we are tempted to quote them.—

"A due understanding of these definitions and

axioms is plainly of the utmost importance; for on it does it depend whether we work with mere symbols or whether the symbols are *σημεία* of philosophical ideas which we comprehend. With the object of guarding against such superficial knowledge, which is useful neither in its results nor as an intellectual exercise, geometrical interpretation of infinitesimals has been often introduced, and magnified diagrams exhibit lines, areas, angles, &c., which are represented by symbols of infinitesimals. Every process, nay, every step in every process, admits of such geometrical translation, and it is most desirable that the student should exercise himself in it; by so doing he will have a most certain test whether his operations are according to the laws of correct inference, or whether he is merely applying mnemonic rules, and groping his way in the dark by some obscure road, and drawing his conclusions as it were by riddle."

This constant translation of analytical symbols into geometrical figures—thus giving to what would otherwise be vague and indistinct "a local habitation" and a definite form—is one of the prime excellencies of Mr. Price's treatise. His appreciation of the difficulties likely to be felt by the student is another valuable feature. Never did any instructor more completely put himself in the place of his pupil, anticipating his inquiries, removing his doubts, and aiding his efforts. The ease and familiarity of the style—arising in some measure from the circumstance that the substance of these pages was first delivered in the lecture-room and afterwards written with little variation—ought not to pass without mention, because this peculiarity renders the work more readable as well as more instructive, and is not often to be met with in English treatises on mathematical subjects.

OUR LIBRARY TABLE.

Phillip Lancaster. By Maria Norris. 3 vols. (Saunders & O'Leary).—"Phillip Lancaster" is a painstaking, carefully-written novel, and evidences a power to appreciate and to indicate shades of character. A great deal of it is extremely interesting, but the interest is not condensed; it is broken and dispersed among too many people, who have no other connexion with each other than that they all reside in the same town. There is a long genealogy of the family of Lancaster, serving to introduce Phillip Lancaster, who is intended to be the hero; but just as the reader has become interested in him the story darts off to follow the fortunes of Gilbert Morris, the young Dissenting minister, his fair wife, and her sister,—who is an interesting person with her secret love and noble silence; but no sooner are the reader's sympathies excited for her than the story digresses again to the selfish old Lord Pennington and his daughter,—the sad and solitary woman whose whole life is timid, patient, and joyless. Then a superb heroine is introduced for no other purpose but to inspire Phillip Lancaster with a boyish passion, which of course she cannot requite, and to go to Italy, where a crowd of other figures are introduced,—and are all treated with the same emphasis, and described with equal minuteness. At the end of the third volume the story is so incomplete that a supplementary heroine has to be introduced in dumb-show, whom we are left to hope and conjecture may eventually reward the virtues of Phillip Lancaster, whose most remarkable achievements in the story have been—a typhus fever and an unsuccessful attempt at a profession. In a novel, as in a picture, there are laws of perspective which are essential to a correct representation of things, and Miss Norris apparently does not believe in perspective, at least she entirely ignores it. The result is, much careful and minute labour, but a very confused and perplexed appearance, from the absence of any preponderating idea in the design. Miss Norris, however, possesses abundance of the requisite material for writing a novel, and we have no doubt that she will acquire a more skilful mastery over it.

March Winds and April Showers; being Notes and Notions of a few Created Things. By "Acheta."

(Reeve).—“March Winds and April Showers” is a charming book. In the guise of gossip it contains the result of much reading and personal observation. It will, or we are mistaken, give all young readers a desire to obtain further knowledge on the subject treated in its pages. We cannot imagine a book that would take a deeper hold of the imagination of an intelligent child than this, which so gracefully discourses upon objects which every child may find and handle for himself in the course of his walks and rambles. Those “children of a larger growth” who have never had their attention turned to such matters, will find the book like a fairy tale, and as delightful as the fairy tales used to be in their nursery days. “The Flowers of the Sea,” “Hedges in Winter,” and the “Rummage in the Stone Cabinet,” are our own favourites. But there is nothing we would spare out of the book, unless it were the “tale for Birdnesting,” the *dénouement* of which is too horrible even to be used as a scarecrow against that branch of juvenile cruelty to animals. The style is not equal to the matter. It is mannered and affected, like a drawl or sing-song in the voice.

Alice Nugent; or, Seed for Coming Days. (Hope & Co.)—A good little book of good advice, in the shape of a story about young ladies with a variety of faults to mend—an admirable governess and good mamma, who excel in training young people—and who are, of course, corrected in the course of the story. There are some sensible observations upon the question of governesses. ‘Alice Nugent’ has a mild, pleasing interest, and will no doubt find favour with some readers.

Charles Random; or, Lunatics at Large. By Thomas White. 3 vols. (Longman & Co.)—This is a lively and spirited performance, with the merit of being easy to read. It does not make any great inroad upon the reader's attention or sensibilities, so that on a wet day in a country house it will be a blessing to the parties there confined. There is much good sense uttered upon many subjects, and a great deal of good feeling manifested. It had very nearly been an excellent book; but the incidents are so wildly improbable and the story so disjointed and straggling, and there is such an absence of common sense put into action (as distinguished from sentiment) that it must take its place as one of the card-houses of fiction, not calculated to endure the wear and tear of a long existence. A very little more care in the composition and selection of the incidents would have made it a finished work; but the author has preferred to leave it coarse, clever, and sketchy. The character of the hero, as drawn by himself—a younger son—an ex-dragoon—a hard-working clergyman—is good; but all the others verge upon caricature. The two heroines, Kate and Lady Helen, are composition figures not particularly like human nature; and the story is told in a very careless, slovenly manner. Still the book is amusing, and we should not have been so discontented with it if the author had not shown that he has the power to do much better.

Oakley Mascott: a Novel. By L. Howe. 2 vols. (Hurst & Blackett).—That ‘Oakley Mascott’ is the work of a young lady we can scarcely doubt—that it really is, as she informs us, her first appearance in print we have no difficulty in believing;—and if good advice had the least chance of being followed we should counsel her to let it be her last. We cannot flatter her that she has any imperative vocation for novel-writing. It is just the kind of book that a lively young lady, with experience gathered on the shelves of a circulating library, might be expected to produce. Plot, characters, incidents, all belong to the same class as ‘Fatherless Fanny,’ ‘The Beauty of the British Alps,’ and other novels of the Minerva Press genus,—except that a more unskilful hand is manifest in the compilation. A young foundling, brought up and educated by a benevolent baronet—with no other clue to her parentage than the name of “Gabrielle” and a silver medal—grows up to be a miracle of beauty and excellence, and turns out to be a British peeress in her own right. Of course there is the inevitable “wicked nobleman” who first wants to marry her and then tries

to murder her, after usurping her title and fortune; and of course he is foiled in all his amiable intentions. But all this is hurried and jumbled, and ill put together. We have heard the facts so often that we know exactly how they ought to be told. The wicked lord is neither wicked enough nor lordly enough,—he falls far short of his prototypes of former days. ‘Oakley Mascott’ is in short a very weak, silly novel. We regret that the days of albums are departed: they had become great social nuisances it is true, but the young ladies who were formerly content with writing sonnets upon three tinted pages now insist on coming out into print.

Mary Ellis; or, Life and its Mistakes. By A. Probert. 3 vols. (Hope & Co.)—This novel is certainly a “mistake.” It is a heavy, flat, unreadable story; the style is that of one “quite unaccustomed” to writing for the public, being very prosy and long winded. The heroine loses her fortune in the first chapter, and her lover follows it shortly after. She behaves in all respects as a pattern heroine ought to do; and is rewarded at the end of the third volume with a rich husband of many virtues, and her faithless lover dies of consumption, and writes her a very contrite letter, something like the confession of a man about to be hanged at Newgate. It is with novels as with cookery—the materials go for less than the skill in compounding them. The author before us has not what cooks call a “light hand” when they speak of pastry. A more skilful *artiste* would have made an entertaining book from the same incidents.

Population and Capital; being a Course of Lectures delivered before the University of Oxford in 1853-4. By George H. Rickards, M.A. (Longman & Co.)—To all students of political economy we commend these clear and masterly ‘Lectures.’ The opinions of Prof. Rickards on the growth of population are opposed to those of Malthus. His theory of capital involves, also, an absolute contradiction of the doctrine—which he describes as “revolting”—that the public and the State are benefited by the extravagance and prodigality of individuals. He has judiciously contrasted with the statistics of the Old World—the foundation of most previous theories—the facts furnished by American experience. By these, the economists of Europe are confounded,—their reasonings are confuted,—their arguments are reversed. Such is the basis on which Prof. Rickards has relied for a considerable part of his teaching. When we follow the increasing people of the Western continent, ever spreading more widely over fertile but uncultured meadows, the Professor's view receives strong confirmation; for, obviously, the thronged and struggling populations of Europe cannot afford statistics for the construction of a law that shall rule the propagation of a race beyond the Appalachian hills. That the earth is too sterile, or that its inhabitants are too prolific, is an alternative which Prof. Rickards refuses to accept. He believes rather that the abundance of the world is sufficient for the nurture of all its children. In the ‘Lectures’ which enforce this idea, many rhetorical resources are displayed, yet the reasoning is never superficial. The style is flexible and pleasant; but in the logic there is as much severity and precision, as to the use of terms and the value of words, as an economist can desire.

Copyright and Patent; or, Property in Thought: being an Investigation of the Principles of Legal Science, applicable to Property in Thought. In a Letter to the Right Hon. Lord Brougham. By M. R. Leveson. (Wildy & Sons).—Prefixed to a report of the arguments in the House of Lords, in the appeal case, “Jefferys v. Boosey,” we have here a plea in favour of international copyright. Mr. Leveson reasons against the decision of the Peers, on the ground that it was contradictory to the spirit of English law, as well as repugnant to the natural and indefensible principles of human justice. His logic goes back even to the original compacts of society, and, keeping close to the speeches of the noble and learned Lords, he has a retort, with an illustration, to array against every adverse sentence that fell from the Chancellor, the

Judges, and the ex-Chancellors. Some of his ratiocinations, we fear, are too far-fetched and fine-drawn to be of practical service in a discussion in which facts and interests prevail so strongly against simple propositions of theoretical equity. However, as a zealous advocate on the right side, Mr. Leveson has fulfilled a useful task. The debate and judgment of the Peers are given at length, and the letter to Lord Brougham will aid in conducting the reader to a fair opinion.

Cheap Fictions multiply, if they do not improve. We have an accumulation of them before us. The first in the series is Mr. R. W. Jameson's *Curse of Gold* (Routledge & Co.), in which the plot is a violation of reason, probability and common sense. A poor man, named Allan Fairland, receives a letter from a mysterious correspondent, who informs him that he (the poor man) shall have 190,000*l.* at once, if he will swear not to be charitable for two years, to keep that oath secret as well as sacred, to live splendidly and not to return the money. He accepts the harsh proposal, and immediately, with 100*l.*—some in silver—in his pocket, encounters a variety of needy persons, whom he dares not relieve. He thus becomes uncomfortable, and is thrown into every inconceivable situation of grief and perplexity. We find him shortly afterwards with a shot in his body, and Destiny threatening to weave him a winding-sheet. However, he survives, not only this, but a long succession of adventures at once impossible and commonplace. But all these yield, in their degrees of absurdity, to the last fine frenzy of the author. A church is disclosed, with a bridal party in the chancel. We fancy the whole extravaganza is about to end in a peal of marriage-bells, a train of white dresses, and a chorus of rural hurrahs, when the clergyman says, “Wilt thou have this man to be thy wedded husband?” At this question the bride lifts off her orange wreath, places it on the brow of a young lady close by, joins that young lady's hand to the hand of the astonished bridegroom—Allan Fairland—blesses them both, and falls down dead! The “third party,” now suddenly introduced, happens to be attired as a fac-simile of the one who died, and she becomes Mrs. Fairland,—whether on the spot or afterwards we are left to decide. Mr. Jameson had a moral to “work up,” and was, evidently, at a loss what to do with it.—Mr. John Lang has found himself in the same difficulty, leaving morals out of the question. In *Too Much Alike; or, the Three Calendars* (Ward & Lock) he, too, has opened and ended with extravagant improbabilities. The heroes are three in number, and, though not brothers, are exactly alike. We spare the reader an account of the follies they perpetrate and the sufferings they endure. It will suffice to know that one of the triad is a Mr. Warren, who marries at last and lives quietly with his wife, “beloved by every soul, rich and poor, in the county.” Even Rutland, we should fancy, could hardly be unanimous in love.—In contrast to these melancholy failures, we are glad to find Miss Fanny Lacy's *Merry Sparks for a Winter Hearth* (Hardwicke), which are cheerful, simple and humorous.—*Mother and Son* (J. H. Parker) is the tale of a perverse prodigal, painful to read, but well meaning, and partly true in its social application.—There is less of the legendary tone than we should like in *Legends of Mount Leinster*, by H. Whitney (Dublin, Kennedy). The author tries fine writing, as well as comedy, and fails in both, though his stories have some reality, and are based on interesting incidents.—In *The Green-Eyed Monster: a Christmas Lesson*, by Whatshisname (J. Cooke), the old moral is enforced, that jealousy is a wicked feeling, which tortures like a thorn in the flesh; but the remedies suggested by “Whatshisname” are not very profound. We would give a dozen better fictions for Mr. John Henry Taylor's *Mouse and her Friends*, and other *Stories* (Chapman & Hall). *Pilpay's Fables* are so well known among us that many writers allude to Pilpay as though he were an English or French translator. The Mohammedans, indeed, claim it as the name of one of their authors—Bidpai—but Mr. Taylor observes, “there is reason to believe that the word was merely a Sanscrit term

for physician." The volume now before us contains a free version, adapted for children, of twenty-one sententious little tales, from an old German translation of the original Hindû fables. It is interesting to mark the similarity between some of these and the traditional fables of Europe, most of which, probably, came circuitously from the East. Thus, "the faithful dog" in *Pilpay* is repeated in the beautiful Welsh legend of Beddgelert, though in the latter a wolf is killed instead of a snake. Mr. Taylor remarks, that 'The Jar of Honey' bears a close affinity to Æsop's 'Country Maid and her Milk-Can,' and a still closer resemblance to 'Lazy Heinz' in Grimm's German collection. But he will probably find more exact similitude in the story of Alnaschar, and his Basket of China, in the 'Thousand and One Nights.' These poetical analogies or derivations furnish a curious study and suggest a good subject for such writers as are busy with the earlier and simpler forms of romance and fable.

LIST OF NEW BOOKS.

Abdul Medjid, Poems, by H. B. Macdonald, 6s. 8vo. 3s. 6d. cl.
Anglo-Belgie Ballads and Legends, by C. F. Ellerman, 7s. 6d. cl.
Arrowsmith's (Rev. A.) *Geographical Dic. of Holy Scriptures*, 13s.

[ADVERTISEMENT.]

THE AUTHORITY FOR THE NON-OBSERVANCE OF THE SEVENTH DAY.

It is recorded in Holy Scripture, Gen. ii. 2, 3, That, on the Seventh Day of the creation, Almighty God "blessed and sanctified the Seventh Day;" this He did, without exemption of any Nation, or limitation to any time; the command, therefore, is universal and imperative.

It is asserted, in direct contradiction of the expressed declaration in this record, That God did not deliver this command, on the Seventh Day of the creation; but as there is no command in Holy Scripture for the observance of the Seventh Day, but this, previous to the time of the Seventh Day being treated of, as a commonly known and observed Institution, see Exod. xvi. 23, &c.; this assertion cannot be regarded.

It is asserted, That though our Blessed Lord or His Apostles are not recorded in Holy Scripture to have commanded, yet the Apostles and first Christians, in addition to their observance of the Seventh Day as a Sabbath, are recorded to have observed a Second Day in each week as a day for assembling together for Religious purposes, namely, The First Day of the week; and further, it is asserted, That this day in Holy Scripture is called "The Lord's Day."

This is all that Holy Scripture does, or is asserted to record on this subject; and as our inquiry has relation to a command of God, we cannot give heed unto Tradition, without incurring our Blessed Lord's condemnation of the men of His time, seeing He condemned them, not for any fallacy in the argument they had constructed; but for the impety of constructing any argument on Tradition, to change any command of God. See St. Mark vii. 13.

It therefore appears, That there is no authority for the Non-observance of the Seventh Day, above, Dogmatic Teaching; or, The Edict of a Living Infallible Head.

May Almighty God grant us to consider, Whether if the Non-observance of the Seventh Day is not preached by St. Paul, and where is it preached by him? we are not cursed by the apostle, if we so Preach, even though we claim to have powers equal to the Angels of Heaven. See Galatians i. 8.

HERMAN HEINFETTER.

17, Fenchurch-street,
1st Sabbath, of 1855.

P.S. January 1, 1855. Again, I inquire, "Hath the Lord as great delight in burnt offerings and sacrifices, as in obeying the voice of the Lord?"

ODE.

The following Ode was written on hearing that the last shell fired at Inkerman had blown to pieces the horse of Major Paynter, commanding the Artillery.

Perfusa quanto sanguine Hyems tepet
Britannico de fonte! Virilium
Semper fuisti victimam
Prodiga, Taurica Chersonese!

Quis vulneratum deferet auribus
Nuper relictae celsi animi virum!
Pallebit ut conjux sub Hæmo
Vipereo moritura morsu.

Spes insurret credula credula
Jam jam reversum edomito Scythâ,
Jam jamque sanandum; salutem
Contulerit popularis aura.

Equus sed idem non revelet domum—
Discerptus ille est sulphureo globo:
Restabat ante atque inter hostes
Solus eques, medius suorum.

Plerosque mortis perpetuus sopor
Pressit; quibusdam cara parentium,
Quibusdam et ipsis cariora,
Nomina contremuere labro.

Sublimiore, O Anglia, anhelitu
Nunquam attigisti culmina gloriæ,
Nec fortiores militarunt
Sub ducibus magis imperitis.

LANDOR.

FOREIGN CORRESPONDENCE.

Paris, January, 1855.

The world is invited for this year to "the capital of Europe,"—which, whilst it is beginning to doubt its pre-eminence in letters, still claims absolute supremacy in matters of Art. Every effort is making to dazzle and overwhelm the stranger. From the façades of the houses,—where elegant ornaments, hitherto unnoticed, are coming out beneath the hand of the *regratteur*, who expunges dust and dirt as the morning-sun drives away shadows from the plain,—to the innermost recesses of the private cabinet, everything that can exhibit French superiority in the appreciation of form and colour is receiving a final touch and being put in the proper light. Numerous works by the most eminent artists are proceeding in closed *ateliers*,—all to be ready by contract at the great reception season. M. Barye, the sculptor, is to astonish everybody by some masterpieces which he is preparing for the Louvre.

This is a good time, therefore, to disseminate some notions on French Art,—not according to any elaborate method, but by way of commentary on passing events. We ought to be prepared for what we are going to see,—not merely informed as to dates and facts, but made aware, to a certain extent, of the theories and principles in vogue. For this purpose I have thought it worth while to collect some accurate information on the establishment of the Permanent Commission of the Fine Arts in 1848,—the result of its labours,—the ideas put forward at its meetings,—the documents produced,—the reforms suggested,—and the abuses criticized. This is a page of our secret contemporary history.

It was during the government of General Cavaignac,—whilst France was still breathless after the struggle of revolution,—that Monsieur Dufaure, the Minister of the Interior, instituted the Permanent Commission. No report of its proceedings has ever been published. A full account would have cast much light on a condition of things very little known; and would probably have influenced and corrected on many points public opinion in France,—a public opinion which, I may be allowed to say, without assuming superiority for any other country, is profoundly ignorant of many things it believes itself to know best. The Frenchman has certainly an artistic instinct; but instinct is not knowledge, and indeed guides unerringly only in the sphere where knowledge is not required.

Monsieur Dufaure was serious in his desire to give to Art in France under the Republic a development never before known. He included in his Commission the most celebrated artists, the most distinguished amateurs, and some persons

remarkable for administrative capacity. The Duc de Luynes was appointed President. Among the members were Messrs. Ferdinand de Lasteyrie, Rivet, Allier, Bavoux, and Frémy, of the Constituent Assembly; Messrs. Delaroche, Ingres, Delacroix, painters; M. Duban, architect of the Louvre and of the Palais des Beaux Arts; M. Gisors, architect of the Luxembourg; and M. Henriquel Dupont, engraver,—with many others. M. Dufaure began business by saying that it was notorious that under the reign of Louis Philippe a great want of order, the interference of Deputies, the disputes of rival schools, the rigour of the Academy, and the favoritism which had become the habit of the Administration, had exerted considerable influence for evil on the fortunes of Art and the condition of artists; that he, in common with others, had been struck by the unanimity of public censure and complaint; that he was very desirous of remedying this state of things; but that being a mere administrator, not much versed in the arts, and yet unwilling to be the dupe of subordinates, he had, with the greatest care and the most perfect good-will and impartiality, composed the Commission, calling together the leading persons connected with Art, all whom he considered the most competent; and, in fine, he submitted the whole matter to them, and was ready to abide by their judgment.

Nothing could be more fair. The fate of Art seemed to be placed entirely in the hands of its protectors and friends. If anything was possible beyond individual exertion, now was the time to show it. The Duc de Luynes replied to M. Dufaure, thanking him warmly for the confidence he had shown and for his generous intentions, and promising the greatest zeal. This would, perhaps, have been a proper termination to the first meeting; but the representatives of systems and theories diametrically opposed were present, eager perhaps for the fray. At any rate, just as the Minister was about to withdraw, a Member of the Institute, a painter, celebrated in Europe—one of those already named—rose, and in an emphatic manner claimed a hearing. There can be no doubt, from his tone and aspect, that he felt persuaded that he was the man to establish the true basis of whatever could be done for Art, and distinctly mark the limit within which the Commission could be of service. He spoke eloquently; but the substance of his discourse, rather dogmatic than discussional, may be compressed into a very few words.

"Art," he said, "is everything: artists are nothing. A nation has no call whatever to trouble itself about any save a few eminent artists. It is its business to notice and consider nothing but High Art—Monumental Art (*le Grand Art, l'Art Monumental*). There are five or six artists for the State. There are five or six pages for the State to fill up. Beyond this, all—men and things—should be systematically set aside and discouraged, it being better that they should utterly disappear." Such was the harsh thesis which the Academician developed in the most elaborate and systematic manner. M. Dufaure was astonished. The Commission remained silent.

In truth, whilst the Minister, who had come down with the most benevolent intentions, the most sincere desire to extend the patronage of the State as widely as possible, was bewildered by this bold claim of monopoly, the assembly of artists, amateurs and politicians was strongly disposed to accept, if not to support, it. Artists—I speak, of course, of French artists—when once the world and official taste have styled them illustrious—soon acquire an aristocratic mode of viewing things. There is no vice so easily learned as contempt, especially when interest is allied with pride. Great "reputations"—even those who have marched up towards the summit with the gestures of demagogues assailing high places, shouting against monopoly—soon become exclusive amidst triumph and repose. They do not see that easy chairs may be found for all who come up. As to amateurs and government men,—still speaking of France,—they incline aristocratically, because they rely on the infallibility of their

judgment, and cannot suppose that any remarkable work, any sign of talent, worthy of notice and encouragement, can escape them. Genius, according to them, rallies round power necessarily, and need not be sought. As for mediocrity, let it expire where it takes birth. At the bottom of all this there is a secret belief in the unerring judgment of the popular voice; and official encouragements are always withheld from those who have not received the vulgar sanction of applause. Thus they change their character,—become rewards, not encouragements,—privileges, not trusts or aids. Those who enjoy and those who dispense them are equally content,—and all new proposals of a more democratic character are received with suspicion and even anger. The party of exclusion seemed to have a large majority in the Permanent Commission called together by a Republican Minister.

The opposite view, however, was soon taken up and fully handled by another speaker, also an artist, but of a younger class, and recently appointed by the Revolution to the Direction of the Louvre. M. Jeanron said (in substance),—"Art is *not* everything; nor are artists nothing. To say so is an exaggeration. Wherever Art is well understood artists are well treated; and wherever artists are well treated, Art is well understood. The French School suffers, and does not keep the promises it holds out, because these ideas are not received. Nothing is so fertile and fertilizing as liberty and sympathy. Despotism and exclusion are sterile. To say that there are five or six artists only to consider, to assist, to support, to employ, and to know, was bold, but not bold enough. I expected to hear their names; and, although they are nearly all present, and although the speaker, who can count them on his fingers, places himself amongst them, this ought not to have withheld him. However, I start from this premise to travel towards the absurd. Even under that supposition the Minister must change our arrangements. If there are only five or six artists about whom we should trouble ourselves,—by this is meant those who flourish and manifest themselves in their full vigour. But there are five or six coming on to take their places, unless you draw up the ladder quite and condemn Painting to live in France only some ten years more. Five or six coming, and five or six already come,—that makes, let us say, twelve. But you will not forbid by a decree the exercise of genius to the son of the poor. If not, has France nothing to care for in that direction without changing the numbers laid down? Moreover, by the side of those who have come and those who are coming, there are those who are going away,—five or six whom we are still bound to honour, and, if necessary, provide for. Shall Homer now-a-days be allowed to beg, even of a Minister, because we can prove that he has not been prudent and economical, and has not put his money in the savings bank? I will name no one living. Greuze died in misery and neglect. Verdier, the first Director of the School of Rome,—styled the French Poussin,—and Jouve-net were beggars in the last years of their lives. Yet our nation boasts of their works; and should be able to boast of the consolations it gave them. If the blind harshness of practice be regrettable in such instances, here we have eighteen artists of whom we should take care. We must alter our statistics and open a new account. The question becomes complicated. You talk of artists of the first rank. Nothing more easy to say. But what is meant by the *first rank*? Where is the second? What are their relations and their real differences? You have many names on your lips. Choose one that is high-sounding, indisputable, consecrated by all nations and ages. Well, I say, if he be great, he is the first of a numerous crowd that follows close at his heels,—and by its powers, its inspirations, its tentatives, augment his powers, stimulate his inspirations, encourage his tentatives, so that his genius becomes as it were an epitome of theirs, the harvest of a sowing made by less fortunate companions, more or less intelligent it is true, but who often have supplied him with far more than he supplies

to his successors. Quote one. Shall it be Michael Angelo at Florence? But Florence, in the time of Michael Angelo, counted with pride its bands of painters and sculptors. She might easily have said: Michael Angelo is the first of my workmen; but, after him, what a crowd I possess,—what a crowd I employ,—who are the ablest in the world! Shall we speak of Rubens at Antwerp, with his thirty assistants, whom history names as Masters? There are deep mysteries here which the Commission must penetrate if it desires really to know. Rome, Florence, Bologna, Venice, Amsterdam, Antwerp understood matters very differently from us in the splendid time of their Art; and this Republican assembly may deign to meditate on their wanderings, although their academical statistics were not so rigorous nor their theories so dogmatical.

"But you proscribe also all assistance and encouragement given to women. Why so? If they possess talent, is it not bestowed on them by God, or does it rise up and show itself against nature? Do not throw work into the hands of a lady,—do not buy her pictures because she is the mistress of a Deputy, or of his son; but if she is the daughter of an artist, or of any other poor person, and possesses true talent,—as for example Mlle. Rosa Bonheur, whose father was a most humble painter, but a laborious, well-instructed, respectable man, who, from I know not what hope of compensation, devoted all his children to the art that had proved so ungrateful to him—why, I say, should you make this hope vain?—These are evil counsels leading to evil actions.—Properzia de' Rossi, Rosalba, Elizabeth Chéron, Claudia Stella—poor women who all dared to confront the miseries of our art,—have honoured it as much at Bologna, at Venice, at Paris as many an Academician.

"You speak also of Monumental Art. This is a fine phrase, little understood, like many other fine phrases that run the streets. Ostade, Claude Lorraine, Paul Potter, Cuyp, Ruysdael and Rembrandt, to mention no more, are not Monumental Artists. But neither is Rubens, nor Vandyke, nor Titian, nor Le Sueur, nor Le Poussin. They were ignorant, according to you, of the first principles of that sober, that lofty style of painting which you call Monumental, and which so proudly disdains the weak affectations and flimsy supports proscribed by Michael Angelo in his terrible saying. Let it be understood, then, that if Titian or Rubens, Vandyke or Rembrandt, Ostade or Claude Lorraine, or Murillo were to appear in these rigorous days and ask for the slightest encouragement from M. Dufaure, he must answer: 'We acknowledge nothing but Monumental Painting.' Yet we visit Flanders and Holland and Spain, which after the lapse of centuries are proud of these names, and we scatter gold to bring into our museums the works of men to whom—if they now lived for the honour and glory of this country—we should deny the slightest assistance.—Believe me (continued the speaker, addressing the Minister) we shall have many questions to discuss, many men to notice; for France has crowds of obscure problems to solve, numerous unknown talents to discover."

It is curious to notice how in the domain of Art, as in the domain of Politics, the rival principles of exclusion and liberty almost necessarily manifest themselves as soon as there is a serious gathering. M. Jeanron, speaking with somewhat of the aggressive spirit of democracy, no doubt excited animosity,—for all the celebrities of Louis Philippe's reign were, almost without exception, in favour of encouraging only those who no longer required it.

In another letter I will relate the fortunes of a remarkable artist—M. Guignet, and show the influence of this first meeting of the Permanent Commission on those fortunes. B.

Border of the Lake Fucino, December, 1854.

WITH all his faults, His Majesty of the Two Sicilies has the merit of having encouraged many important public works. I shall not enumerate them here, but call attention to one great work now in its commencement, with every prospect of its being brought to a successful conclusion. I allude to the draining of the Lake Fucino, or Celano. It lies in the centre of the boot, about 80

miles east of Rome and 110 north of Naples; and being surrounded by the highest Apennines is, as it were, the reservoir into which fall all the rain and melted snows which flow down from its gigantic neighbours. From the effectual manner in which it is inclosed on all sides, there is no natural outlet for its waters, and thus it happens that an immense space of land is submerged,—a yet larger space is continually threatened by the possible rising of the body of the lake,—much land and capital have been lost,—and the inevitable consequence would be, that capital would be completely withdrawn, and what might be made a garden would become a desert. Yet, notwithstanding these uncertainties and dangers, such is the fertility of the soil that a population always springs up in its immediate neighbourhood, just as it does on the ashes of Vesuvius. The object of the present undertaking is not merely to drain the lake, but to form a channel of communication with the Liris, whereby all future accumulations of water may be carried off. The enterprise is one of the greatest of the present reign; but before entering into details, it may not be uninteresting to the general reader to know something of its history. Julius Cæsar intended to have it drained, and might have done so had it not been for his death. Claudius was the next emperor who undertook the work, and that, too, in good earnest; "not merely for profit," says Suetonius, "but for glory." It is interesting to observe, that the mode of completing the enterprise was similar to that now adopted. Certain persons offered to drain it at their own expense, provided the land redeemed was conceded to them. Partly by tunnelling, and partly by cutting the mountain, he with difficulty completed a canal, after working eleven years incessantly with 30,000 men. Pliny, speaking of it, says:—"Amongst the great works of Claudius especially deserving of notice, though destroyed by the jealousy of his successor, was the tunnelling of a mountain to carry off the Lake Fucinum; * * * and all was done in the midst of inner darkness; facts beyond the conception of all, except of such as have seen them, and incapable of being described by him in language." The praise is not too great, when we consider the low state of science which marked that age, and the want of powder. All the details of the outlet were not completed, however, by Claudius; and Nero, so far from finishing them, suffered it to fall into ruins. Adrian repaired it. From that time, or from the fall of the Roman empire, up to the thirteenth century this grand public work experienced the same fate with all other public monuments in Italy. Frederic the Second, in 1240, Alphonse the First, of Arragon, and Prince Colonna, at the beginning of the seventeenth century, made several efforts either to drain the lake or to limit its ravages; all of which, from various reasons, failed. Under the reign of Charles the Third, the waters of the lake became so low that the remains of Mar-ruvio, one of three submerged cities, were discovered, and all sense of danger passed away; but from 1783 to 1787 the floods returned yet stronger than ever, and wholly destroyed the fertile lands in the neighbourhood. From that time till now various plans have been presented, adopted, and begun, though for several reasons suspended. The work is now, however, it is to be hoped, in a fair way of being completed. The company who have undertaken this project is called Neapolitan, though I believe there is not a single Neapolitan in it; whilst the Concessionaire is a Frenchman. The work is to be completed in eight years, on pain of forfeiture of certain rights. The commencement of the operations will be upon the old tunnel of Claudius, which is incomplete, and is 16 feet below the lowest part of the bed of the lake. Its actual height is from 7 to 14 feet; but it is now proposed to enlarge it to the height of 20 feet, and 16 feet in breadth. When completed, a dam is to be erected at the mouth of the tunnel, with a number of sluices at different levels. The highest sluice will be opened, which will carry off the first few feet of the surface water. Whilst these works are in course of execution, dredging machines are to be used, with the view of clearing a canal for the

sluices to the deepest part of the lake. The sluices will afterwards be removed one after another,—one only remaining in permanence to regulate the flow of the water into the tunnel. To this must be added, that the formation of a reservoir, as a temporary recipient for rain or river water, enters also into the plan of the company.

In this way modern science and enterprise will triumph over obstacles which nature has ever interposed to the cultivation of a vast tract of land, and will complete a work which was designed so far back as the time of Julius Cæsar. There is this difference, however, that whereas the ancient plan contemplated only the limiting of the inundations of the lake, the actual plan attempts the complete drainage of it. Of enterprises of this character it is said to be the grandest that has ever been undertaken. Lake Haarlem extended, indeed, over a larger area, but it was not so completely drained as the Lake of Fucino will be.

A few words now as to the benefits arising from this mighty operation. Thirty-three thousand acres of the richest soil will be reclaimed,—which become the perquisite of the Company. This is not all, however; for an end will be put to the uncertainty and insecurity which arise from the periodical rising of the lake, and which forbid the employment of capital on land which may be submerged the next season. This probability, or possibility, depends on a curious feature in the natural history of the lake. I allude to the sudden rises to which it is subject, the causes of which have never been explained, though speculation has been busy. The variation in its level within twenty years has amounted to so much as 40 feet, it having been in 1816 higher by 40 feet than it was in 1835. Since that year it has again been gradually rising, until it has now risen 20 feet higher than it was in 1835. These are no slight variations, and prove how much danger attends the cultivation of the land bordering the lake for a considerable space. Strabo, in a note which I quote from Suetonius, alludes to the yet greater height to which the waters attained in his days, and suggests an explanation of the cause similar to one which has been adopted in the present day. It is a most curious question. One favourite theory of the present day, though without any facts to support it, is as follows:—There is a certain drainage area belonging to the lake, but a considerable belt of high ground above it has no drainage at all. It is suggested that in the winter time, with a prevailing wind from one direction, the streams are carried towards the Lake, increasing its bulk and its height. With a contrary wind these streams are carried off, and a corresponding diminution ensues. Another theory is, that there are fissures in the rock whereby the water escapes—that by some causes these fissures are closed—that during other years these fissures are again opened and the water flows. The drainage of the water, it is supposed, leaves sand and earth which choke up these fissures, that the water consequently rises, and when high bursts through and finds for itself a channel. Whichever theory be right, or whether either, it is clear that an immense benefit will be conferred by the drainage of the lake, not merely by the restoration of much land that is constantly submerged, but by giving security to the proprietors in the neighbourhood. An idea may be formed of the immense quantity of water to be carried off by a rough calculation that it will amount to as much as the Thames carries off in the summer time. I am told that it is a most splendid site for a regular system of irrigation, whereby the value of the land will be doubled. The surface of the ground is regular, over which constantly flow a number of small streams. It is proposed, therefore, to form a number of concentric circles round the lake, or its area rather, and erect sluices on them at the crossing of each of these rivers. Nor is this vast undertaking without great interest to the antiquary. Three cities and a large number of counting-houses have at various periods been swallowed up by the waters of the lake. History preserves the names of these three cities—Valeria or Marrivium, Penna, and Archipus—which contain a treasure of antiques perhaps not less precious than that of Pompeii. In

the reign of Charles the Third, about the latter end of the fourteenth century, the waters of the lake fell so low that the ruins of the ancient Valeria were exposed to view. The statues of Claudius, of Agrippina, and of Nero, were found there, and now adorn the Palace of Caserta. Amongst other objects, have recently been discovered the ruins of a house on the borders of the lake, and a large stone bearing an inscription, on which is recorded the name of a freedman of Tiberius Cæsar. The curiosity of the antiquary will therefore be now especially directed to the Lake of Fucino,—and from time to time I shall hope to send you notices of important discoveries.

H.

OUR WEEKLY GOSSIP.

Our correspondence on the invasion of authors' rights, established in Canada and in progress at the Cape, points to the necessity for a more efficient organization of Literature than now exists. Art possesses an organization. Science possesses an organization. When a question arises touching the interests of Art and artists, the Royal Academy is up in arms. When the interests of Science are assailed, the Royal Society is there to make defence. Because these corporations represent the whole body of workers in these great departments of intellectual activity, the public will listen to their words and Ministers accede to their requests. But who is to speak for Letters? True, there are many Societies acting in the name of Literature—holding their rank as exponents of literary interests: the Society of Antiquaries, the Royal Society of Literature, the Athenæum Club, the Guild of Literature, the Royal Literary Fund Society, the Literary Institute of Great Britain, and some others. Which of these, however, would think of speaking to the Minister and the nation in the name of Literary Men? The Royal Academy does speak for Art,—the Royal Society for Science. But the Society of Literature, when a case of wrong like this new law at the Cape is made public, knows that it does not sufficiently represent Men of Letters to be able to challenge attention in their name. The Society of Antiquaries would be heard on any point connected with its studies; not on the very modern subject of copyright. Other Societies have special objects. The Literary Fund Society has lost influence; the Literary Guild has yet to win it. Nor could either Society, as at present constituted, undertake the general guardianship of literary interests. What is wanted by men of letters is a literary organization. Until Literature acquire such an organization it will be likely to suffer wrongs,—which all must regret and none will be able to resist.

The Queen has granted a pension of 50*l.* a year to Mrs. Kitto, from the Civil List.

The diploma of the Historico-Theological Society of Leipsic has been forwarded to the Rev. William Cureton, Canon of Westminster, creating him one of its Honorary Members. This is a gratifying recognition by so important a Society of the services rendered by Mr. Cureton to Biblical and Oriental learning.

Our readers will be glad to hear that the Forbes Testimonial Committee have conciliated all opinions by adopting the double form of memorial—medal and prize of books, and a bust. The prize is to be annual, to be given "to the most distinguished student of Natural History in the Government School of Mines."

Some weeks ago, in anticipation of the Printed Report, we announced, as the results of the Inquiry of the Committee, that Haileybury, as the exclusive avenue to Indian service, is to be closed,—the head-quarters of Oriental preparation being transferred to Oxford,—without, however, excluding other colleges throughout the country from the advantages of the change; and that the Indian service is to be thrown open to all capacities, under certain special and not unreasonable restrictions—an announcement now confirmed by the Printed Report.

An incredible story is making "the grand tour" of the journals about a supposed discovery of an unpublished novel by Scott. We have not noticed it hitherto, in the hope that it would die the speedy

death of all impostures:—nor should we have noticed it even now, had we not found from correspondence that our silence is supposed to have the significance of assent. The tale, as set afloat in a publisher's puff preliminary, runs thus:—In the year 18— a German merchant who had made a fortune, and was at a loss how to spend his money, conceived the idea of forming a library on an eccentric principle. After building a room to his taste, and lining it with book-cases curiously carved, he determined that his library should consist of the works of two authors—Scott and Goethe. He desired to possess every edition of these authors. He employed M. Cabany, of Paris (the father of the author of the puff in question), to buy the books, gave him six months to execute the commission, desired above all things that the collection should be complete, and requested that each volume might be richly bound. In the original letter, written by the German merchant to M. Cabany, it is not pretended that anything is said of manuscripts, but it is alleged that before the collection was completed he desired that it should comprise a manuscript of Scott. Scott, accompanied by his daughter Anne, came to Paris to collect materials for the 'History of Napoleon.' Through the mediation of William Spencer, Miss Anne Scott—it is pretended—was induced to take an interest in the quaint fancy of the bibliomaniac. Her father—it is again alleged—had long before given to her a manuscript story, called 'Moredun,' which had never been published. She prevailed upon Sir Walter to allow her to give 'Moredun' to William Spencer. A letter, which it is said accompanied the gift, runs as follows:—

"Paris, 4th of November, 1826.

"My dear W—S—,—I am constrained to make of this note a letter of initials, for I am not quite satisfied with myself in agreeing to write it, and there is no saying into whose hands it may fall. The story which Anne has told me about your daft friend, the foreign monomaniac, is as clearly the case of a man who requires to be cognosed as I ever met with; but as it appears to me that she has taken it most ridiculously to heart, we have brought our discussion of it to a conclusion, by my consenting to her doing what you could not be told of until she had received the permission of papa. She had possessed herself, for a long time past, of a tale which I had at one time the intention of making the first of a series of such things, drawn from the history of Scotland, a notion which I afterwards gave up. For Anne, however, that story has ever possessed a great charm; and I allowed her to keep it, because I was under the impression that a mere story, which offers no particular merits but those of events and a plot, would not appear advantageously amongst works which had the higher object of painting character. That would be to take a step backwards, which would never do. Besides, as far as I can recollect, there are a great many anachronisms and freedoms used with persons and places which are not in keeping with the character of historian, to which I now aspire. I consider, then, that in authorising my daughter to give you that work as a panacea for the imaginary ills of a foreign monomaniac, I only permit a change of proprietorship. At the same time, in allowing Anne to make a present to you of what is but a trifle after all, I must make a most serious stipulation regarding it; for I tell you candidly that I believe W—S— himself to be the real *malade imaginaire*. That stipulation is, that if at any time you take the fancy of publishing that tale you will do so with the initials only, and that you will do all that you can in fairness do to countenance the idea that it is a bairn of your ain. I wish I could do something for you personally of some less doubtful character than of humouring the caprice of a daft man; but you know how I am placed at present. Believe, however, that you have no more sincere friend than

W. S.

Here is a string of allegations, some of which, if the facts were true, would be capable of proof. Was Scott a man to give away manuscripts worth a hundred times their weight in gold? Could he have given a novel away without some trace of such a transaction being left in his minute and familiar correspondence? Is the above letter in the style of Scott? Does not the first paragraph read as if written—not for the gift—but for the recovery of the imaginary romance? In short, can anybody read this letter without feeling that the story is as gross an attempt on public credulity as 'Vortigern' or 'Walladmor'?

The new Report of the Spalding Club, "founded for the purpose of printing historical, ecclesiastical, genealogical, topographical, and literary remains of the north-eastern counties of Scotland," speaks of progress in the long-expected 'Collection of Drawings of the Ancient Sculptured Stone Monuments of Scotland,'—of a 'Selection of Papers from the Charter Room at Cawdor,' as being nearly ready for delivery,—of the first part of 'Extracts from

the Diary of Alexander Brodie, of Brodie,' as being at press,—and of other works, including the 'Diary of General Gordon,' from the Royal Library at St. Petersburg, and 'The Bruce,' as being in a state of preparation. The auditors' report shows a satisfactory balance in the Treasurer's hands.

A strange paragraph appears in the Irish papers, announcing that Mr. Carleton, the novelist, is about to emigrate to Canada,—and has chosen the time to fling the following lines in the face of his country,—

Ungrateful country, I resign
The debt you owe to me and mine;
My sore neglect—your guilt and shame—
And fling you back your curse of fame.

Mr. Carleton—we may remind our readers—has been for many years in the receipt of a Government pension, amounting to 200*l.* per annum, as an acknowledgment of his literary merits. It is scarcely necessary to add, that we withhold our belief in the seriousness or authenticity of the above defiant lines.

Mr. William Owen, son of Prof. Owen, is appointed to a junior clerkship in the Foreign Office, Downing Street.

On Monday next the British Museum will reopen after the holidays.

The Horticultural Society have made some changes in their programme. The first open-air gathering of the year is to be held—by permission of Her Majesty's Commissioners—in the gardens of Gore House, instead of at Chiswick. As the lateness of our English summer so often renders the day of the May meeting cold and comfortless, a change which brings the Festival of Flora in that month some miles nearer home is clearly for the better. These garden meetings are in future to be held on Wednesday instead of Saturday. As regards the ordinary meetings in Regent Street, these are to be six in number for the year,—to be held in February, March, April, May, June, and November. A new or an increased interest is to be given to these in-door meetings by the greater attention that is to be paid to practical results. The Council, in proposing these additions to their programme of Exhibition, say:—"Among the unenumerated articles which may be more particularly noticed, are Ornamental Plants, and Useful Fruits or Esculents of all kinds; Models of Improvements in Horticultural Buildings, Improved Garden Implements, and whatever contributes to Garden Decoration. The Council will also be glad to encourage the production of examples illustrating the operations of Arboriculture, whenever they are calculated to throw light upon either the theory or practice of that important branch of rural economy, or upon the quality of British-grown timber; the very great interest which some exhibitions of this class were found to excite in the spring of 1854 induces the Council to draw particular attention to this point." The course of events has shown that new sources of supply for some great branches of manufacture require to be discovered, such as textile materials of all kinds. Such exhibition may aid in the discovery.

We hear from Paris that the Minister of Public Instruction has raised the salaries of Professors of the Faculty of Medicine from 6,000*fr.* to 7,000*fr.* He has also increased the allowance to Professors of the Faculties of Letters and of Sciences present at examination from 5*fr.* to 7*fr.* for each examination. He has, moreover, decided that the maximum of what is called the *Eventuel* (what is received from the pupils) shall be 5,000*fr.* for professors, 2,500*fr.* for *agrégés*, and 5,000*fr.* for secretaries.

Railway companies, if not always "on the crest of the advancing wave," are still sensible of obligations implied in the very fact of their exercise of great powers. A Crewe founded in the midst of material interests is a fine witness for the spirit that accompanies true enterprise in these later days; and arts encouraged, charities promoted, schools endowed in many quarters, are also witnesses of the best kind, that money-making is not "the be-all and the end-all here,"—even among those who are believed to be uncompromising worshippers of Mammon. As yet another witness of this sort, we chronicle with pleasure the open-

ing of the New Schools at Doncaster, built by the Great Northern Railway Company. In the good old times which some of us deplore, when the Great North Road brought thousands of vehicles a year through Doncaster and the equipages of our Charleses, Jameses and Elizabeths drew up before the Bear and Crown, who ever heard of the Road Trusts founding schools or troubling themselves about the education of the post-boy's or the ostler's little folks?

An attempt is being made to unite the two Universities of Aberdeen—King's College and University and Marischal College and University,—and on condition that the union shall include the Colleges as well as Universities, Government proposes to introduce or support a bill through Parliament. The two Universities are among the oldest of the educational institutions of Scotland. King's College and University was founded in the year 1500, and opened in 1505; Marischal College and University was founded in 1593. The affairs of the older College are conducted by the Senatus Academicus, which consists of the Principal and Professors. From the decisions of this body appeal is competent to the Rectorial Court, which is composed of the Rector and his four assessors, and thence to the Chancellor—the Earl of Aberdeen. The government is of the most exclusive character, and the private endowments are of a very valuable description. Hitherto there has been great difficulty found in getting at a full knowledge of the resources of the College and University, notwithstanding that several Royal Commissions have made this a special subject of inquiry; but enough has been ascertained to warrant the presumption that under an improved system of management they might be greatly enlarged. The foundations of the College are very valuable, and also under the care of the Principal and Professors. There are in all 134 foundations, or bursaries, whose aggregate annual value is 1,770*l.*; 84 of the foundations are open to public competition by students from any part of the world. In the University there are nine chairs, five of which are in the Curriculum of Arts, the other four being for Divinity, Medicine, Civil Law, and Oriental Languages. The patrons are the Rector, the Procurator Gentium, and Senatus Academicus, with the exception of the Divinity chair, the patronage of which is vested in the Synod of Aberdeen, in the Church of Scotland. The students in Arts number about 240. The College buildings are situate in Old Aberdeen, and about a mile from Marischal College. The affairs of the younger institution are managed by the Senatus Academicus, which consists of the Chancellor, the Rector, the Dean of Faculty, the Principal, and the nine Professors, from whose decision appeal may be taken to the Rectorial Court, which consists of the Rector and four assessors, who are elected annually, on the 1st of March. There is a chair of Natural History in this College, under the patronage of the Crown. The chairs of Moral Philosophy and Logic, of Natural Philosophy, Greek, Humanity, in the Curriculum of Arts, are also in the gift of the Crown; while the Town Council presents to the Mathematical chair, and the College to most of the others. There are 114 foundations of the annual value of 1,150*l.*, 70 of which are open to public competition. The ancient buildings of the University having fallen into decay, a new building has been erected at a cost of nearly 30,000*l.*, of which sum Parliament voted 15,000*l.* In this building there is accommodation for a much larger number of students than attend the College; but the attendance has been increasing, and is larger this season than it has ever been before. Improvements have also been introduced in various departments, and the University has gained a high character of late, which it promises to maintain; there are no students resident in the College, but here, as at Old Aberdeen, the fees are so low that most students can afford to board with private families in the city. Union of the two bodies would increase the means of education, give a higher value to the degrees, and enrich the professorial chairs. These latter are at present poor; and one reason strongly urged for the union is, the hope that Parliament

will be induced to increase its grants in aid of Scotch Universities.

THE WINTER EXHIBITION OF CABINET PICTURES, SKETCHES, AND WATER-COLOUR DRAWINGS OF THE BRITISH SCHOOL, is NOW OPEN, at the GALLERY, 121, Pall Mall, Daily, from Ten in the Morning until Five.—Admission, One Shilling. Catalogue, 6*d.*

COLOSSEUM, Regent's Park.—Admission, 1*s.*—The original PANORAMA OF LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatory, Swiss Cottage, &c. The extraordinary PANORAMA OF LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

CYCLOPEDIA, Albany Street.—NOW OPEN, with a Colossal Moving Panorama of the City and Bay of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the great Eruption of 79, and present state of the Excavated City. Edited by J. J. McNEVE, from Sketches taken by himself in 1832. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1*s.*; Children and Schools, half-price.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—THE CAVALRY CHARGE AT BALKARAVA, painted by the Messrs. Danson, is now added to the DIORAMA illustrating EVENTS of the WAR. The Lecture by Mr. Stoeckeler, including Description and Diagrams of Bastions, Gabions, Fascines, &c. Daily at 3 and 8.—Admission, 1*s.*, 2*s.*, and 3*s.*

Mr. ALBERT SMITH'S MONT BLANC is NOW OPEN EVERY EVENING (except Saturday), at 8 o'clock. The Morning Representations take place every Tuesday, Thursday and Saturday, at 3 o'clock. Stalls can be taken at the Box-office every day, from 10 till 4.—EGYPTIAN HALL, PICCADILLY.

QUEEN'S CONCERT ROOMS, Hanover Square.—THE AZTEC ILLUSTRATIONS, the REPUTED GODS of IXIMAYA, and the EARTHMEN, or EARTHMAKERS, People who burrow underground. The first of either race ever seen in Europe—the existence of which has been much disputed. Grand Fashionable Exhibitions, Daily, from 11 to 1 o'clock. Lectures at 12. Admission, 2*s.*; Reserved Seats, 3*s.*; Children, Half-price.—EXHIBITIONS for the MILLION in the LONDON GALLERY, 4, Pall Mall East. Observe the Prices—Gallery, 6*d.*; Body of the Hall, 1*s.*; Stalls, 2*s.* Daily, from 3 to 6, and 7 to 9. Lectures at 4 and 8. The Rooms, having been prepared for the purpose, will accommodate 1,500 persons at a time. Miss Clarie Wallworth, Mr. Henry Smith, and Mr. W. J. Morris, in the Crystal Palace, will assist in the humorous puzzles (concerning whose history, birth, and abiding-place all the world are at variance), forming an Entertainment unlike any before introduced to the London public. 'History of the Aztecs,' 1*s.*, and 'Earthmen,' 6*d.*

LOVE'S NEW ENTERTAINMENTS.—Christmas Holidays.—Ventriloquism Extraordinary.—Upper Hall, Regent Gallery, 69, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday, Saturday at 8.—Mr. LOVE, universally accepted as the first dramatic ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called 'THE LONDON SEASON,' and other entertainments. Pianoforte, Miss Julia Warman.—Stalls, 3*s.*; Area, 2*s.*; Galleries, 1*s.*; Tickets at Mitchell's Royal Library, 33 Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 3.

ROYAL POLYTECHNIC INSTITUTION.—The following LECTURES, delivered last night, began a SPECIALLY PREPARED LECTURE by J. H. PEPPER, Esq., on Professor WHEATSTONE'S Experiments in the TRANSMISSION OF SOUND, through Solid Conductors, illustrated by a TELEPHONIC CONCERT.—FIRST PART OF AN ENTIRELY NEW and SPLENDID OPTICAL DIORAMA, illustrating the VOYAGES OF THE SAILOR, with beautiful PHANTASMAGORIA EFFECTS, and appropriate Music, arranged by Mr. W. Waud.—MONDAY EVENING, the 5th inst. LECTURE by the INDUSTRIAL CLASSES: ON PHYSICAL GEOGRAPHY, by TRUTHAN SPEER, LL.D., &c.—Great INCREASE in the VIEWS OF THE WAR: THE BATTLE OF THE ALMA, SIEGE OF SEBASTOPOLIS, THE ENGLISH BATTERIES, &c. &c.—LECTURE on the MINIE RIFLE, and that powerful implement of War, the STEAM GUN, projecting SIXTY BALLS per minute, which has been erected by Mr. PERKINS, and will be charged daily, 9 to 11. LECTURE on ELECTRICITY, by Dr. BACHOFEN.—Mr. CRAWFORD'S VOCAL ENTERTAINMENT of the PATRIOTIC SONGS OF SCOTLAND.—For the special AMUSEMENT of the JUVENILE AUDITORY, DAVIS'S GENIUS MARIQUETTES will be exhibited.—All the latest LECTURES, EXHIBITIONS OF MODELS, &c. &c.—Fresh Decorations.

Mr. VAN NOORDEN'S New MUSICAL GAME, the POLY-HARMONICON, explained Daily by the Inventor.

THE LARGE THEATRE is open on Saturday Evenings, from half-past seven till Ten.—Lecture by Mr. W. Waud, on the Illustrations of the PATRIOTIC SONGS OF SCOTLAND, the AMERICAN ENTERTAINMENT, and Mr. WAUD'S BAND.

MEETINGS FOR THE ENSUING WEEK.

- MON. Geographical, 8.—Notes during a Journey performed in Persia, by Mr. Abbott. Despatch from Dr. Livingston containing his routes from Lake Ngami through the Interior of South Africa to Angola.—Despatch from Col. Herman, stating that the Reports of Dr. Barth's Death may still prove unfounded.
- Institute of Actuaries, 7.—On the Improvement of Life Contingency Calculations, by Mr. Farrer.
- TUES. Syro-Egyptian, 7.—A further Argument and Explanation of Hieroglyphics, by Mr. Sharpe.
- Institution of Civil Engineers, 8.—Discussion upon Mr. Barlow's paper, 'On some peculiar Features of the Water-bearing Strata of London Basin.'
- Zoological, 9.—Scientific.
- WED. Royal Society of Literature, 8.
- Ethnological, 8.—On the Character of the Ethnological Exhibitions of London, by Dr. Conolly.—Notes on the Native of Tropical Regions, by Mr. Andrew Ramsay, Sandy Cape to Port Errington, by the late Dr. Sibbald.
- Graphic, 8.
- THURS. Society of Antiquaries, 8.
- Royal, 8.
- Royal Academy, 8.—'Architecture,' by Prof. Cockerell.
- FRI. Philological, 8.
- SAT. Asiatic, 2.

FINE ARTS

A *Hand-book for Young Painters*. By C. R. Leslie, R.A. With Illustrations. Murray.

LECTURES delivered by the author at the Royal Academy form the nucleus of this volume.

Mr. Leslie declares in his Preface that he is driven to write, not because no previous writers on

Art have existed, but because too many have already lived, and too much has been written. He is not afraid, he says sarcastically, at the present day of want of patronage for Art, but of want of Art to patronize. The discovery of his own errors entitles him, he thinks, to expose the errors of others; the discovery, he ingeniously says, made too late to benefit himself, may be soon enough to be of use to others. He does not, however, under the modest title of "A Hand-book" address students alone, but matured painters and the whole world of general purchasers.

Mr. Leslie's book is divided into sixteen chapters, in which he discusses the following subjects:—the imitation of Nature,—the imitation of Art,—the Distinction between Laws and Rules,—Classification,—Self-teaching,—Genius,—the Ideal,—Drawing,—Invention,—Expression,—Composition,—Colour,—Raphael,—the Flemish Painters,—Landscape and Portrait. The illustrations are, eclectic examples culled from universal Art, from Orcagna, Lippi, and Angelico, down to Jan Steen and Terburg. Mr. Leslie's catholic taste dwells with pleasure on Hogarth and Michael Angelo, and yet loves to expatiate on such smaller mortals as Cozens and Girtin, the founders of the modern English school of water-colour painting.

Mr. Leslie's mind, while very universal and academic in its tastes, is certainly not beyond its age, nor free from ultra-conservative and conventional predilections. His genius is not innovating or subversive; and rests quite satisfied with old truths, and sometimes, we almost think, with old errors. Mere enamelled pieces of drapery—such as Terburg's upholstery picture, 'The Satin Gown,' thoughtless and objectless as it is—delight him apparently as much as all the piety and purity that pervade the religious poems of Fra Angelico. Ruysdael satisfies him in landscape, and Jan Steen in his choice of subject.

It is as an opposer of many of Mr. Ruskin's opinions, however, that Mr. Leslie chiefly demands the thanks of the artistic world. He shows that it is from Lord Lindsay that this reformer has so largely borrowed; and in the works of the noble writer will be found his new opinion of the purity and spirituality of blue as a colour, compared with the sinful associations of red. By both writers, the sensuality of great colourists has been insisted on, following out an idea of the marvellous and crazed Blake, that "Correggio was a soft and effeminate, and therefore a most cruel, demon,—whose whole delight is to cause endless labour to whoever suffers him to enter his mind." To Blake, chiar-oscuro seemed an "infernal machine invented by Venetian and Flemish devils." This Art-mysticism Mr. Leslie entirely subverts, by showing that the sensual Correggio was fonder of blue than red. For the Pre-Raphaelite school to reject such men as Titian, Correggio, Rembrandt, Rubens, and Reynolds, seems as absurd to our writer as for Prof. Airy to revive the system of Copernicus. The whole book may, in fact, be considered as a protest for the old masters against the new heretics. He says:—

"But the young painter is now told that he must 'go back to first principles.' And what, I would ask, are these first principles? Many of the principles of Nature, most important to Art, are among the latest discoveries. But the student must 'ascend to the fountain head, he must study Duccio and Giotto, that he may paint like Taddeo di Bertolo and Masaccio—Taddeo di Bertolo and Masaccio, that he may paint like Perugino and Luca Signorelli,—and Perugino and Luca Signorelli that he may paint like Raphael and Michael Angelo? But I ask, why should he aim to paint like any, even the last of these? Why attempt that which never has been, and never can be accomplished?—namely, the reproduction of the exact style of any age or master. Northcote was told that a picture had been painted by a living artist that might be mistaken for a Claude. 'Then I know,' was his reply, 'that it is good for nothing; if you should tell me that a picture were painted as fine as a Claude, it would be quite another thing, for to be equal to Claude a painter must be as distinct from him as he was from all the painters before him. He must have looked at Nature for himself as Claude did; availing himself of the assistance of previous Art only in the degree in which Claude did so.'"

On Turner, as put into competition with Claude, and idolatrously praised by Mr. Ruskin, Mr. Leslie is justly severe. "There never lived one," he says, with clenched teeth, "in whose works greater absurdities, or a larger number of impossible effects, might be pointed out,"—and in Claude can

be found passages not in Turner, just as there are passages in Turner not in Claude. Turner saw variety of colour where others saw only unity; and, therefore, often when there was really only unity, he ostentatiously put variety.

Mr. Leslie laments that the 'Building of Carthage'—heavy, theatrical, and "evident paint"—should be hung next Claude's sunny 'Embarkation.' The most artificial work of the great Englishman looks ill beside the most natural work of the great Frenchman. Claude could not paint a storm. Turner was all rain and thunder:—Claude is all amenity and sunshine, *douce*, bland, and gentle. Turner, cynical, prefers "great-coat" weather, and his eyes grow brighter as he looks out grimly through driving mist, and sees the trees "jewelled with the rain-drops." Mr. Leslie acknowledges that Turner is a great ruler of light and space, and "a prince of the powers of the air."

About Turner's trees, Mr. Leslie and the architect, with his old lamps and new (Aladdin's among them), fall out again. Our author looks through Turner's works, and finds no tree much like Nature but here and there a willow, and some few dozen Italian pines and cypresses. He remembers no oak, elm, ash, or beech, and by no means the wild perfumed tangle (sweet as Neræa's hair) of an English hedge. The vegetation of his foregrounds is not English,—and from his never expressing the deep fresh verdure of his own country, "he is the most unfaithful (amongst great painters) to the essential and most beautiful characteristic of English midland scenery." In a Sketch of that view from Richmond Hill which Quin, with watery lips and rolling eye, once declared was "a perfect haunch, sir, by Jove!" Mr. Leslie says, Turner has given the objects a brown-gravy colour never seen in emerald-loving Nature. The trees are of forms unknown in this planet, and are shaped like pears with the stem downwards. Let us not conceal the fact:—Turner could not draw. He did not always see the true form of an object, and when he did, could not always convey what he saw to paper. In another place, Mr. Leslie laments the "palette-knife epoch" of Turner's mind. "I have laid, the palette-knife down," he said himself in one of his letters, "but not until I had cut my own throat with it." The pictures of this epoch are frequently forged; the Wardour-Street art being just able to rival such mere smearings of dirty brushes as constitute the chief merit of those works. In a subsequent passage, Mr. Leslie says, Turner fell into the common mistake of supposing warm colours essential to convey the idea of warmth in a landscape. The gold idol is thus proved to have feet of clay; or, like the Dagon of Ascalon, to terminate in a fish's tail. We hope such severe technical lessons as this will lead Mr. Ruskin to study that interesting work, 'Glanville's Vanity of Dogmatising,' and lead him to see that truth is prismatic and many-sided.

Constable is Mr. Leslie's weak point. We all have our idols:—some are mere fetishes, and others resemble the Apollo,—but are no less idols. The simplest things that Constable said, even to trifles such as "Do you take soup?"—"I will trouble you for a slice of that mutton,"—seem indelibly engraved on Mr. Leslie's mind. Constable was a great painter; but still a painter of small and local aspects of a *county* he had only partially seen, and one who carried artifices of conventional mechanism to a blameable extent. Here, again, his champion runs full tilt against Mr. Ruskin, who has dared to touch his shield and deny the beauty of his love. Mr. Ruskin, in his 'Modern Painters,' accuses Constable of despising Ancient Art. His champion answers: he copied Raphael's Cartoons in pen-and-ink; sketched from Ruysdael, Wilsop, Rubens, Teniers, and Claude; and his walls were covered with pictures and prints: in fact, he "venerated styles in Art that have been venerated by all the best artists." In reply to a charge of Constable's unteachableness and want of veneration in approaching Nature, the gallant knight pricks forth again, and quotes Constable's own lectures inculcating humility on the student. He denies that he had a morbid preference for

subjects of a low order, and asserts that he drew better than Turner. The painter's love of "great-coat weather" is refuted by a knowledge of all he has painted; many of his best works being all a-glow with the kindling azure and soft invisible fire of summer.

For past as well as existing institutions, Mr. Leslie has an amiable but undue reverence. He still keeps a lamp burning before small shrines, of a worship elsewhere forgotten. Fuseli he values rather by the size than the sublimity of his works. Impetuous fancy, running to caricature,—bad drawing and anatomical affectation,—made the fiery Swiss a mere ape of "Michael Angelo." Incongruous thoughts, untrue to themselves, false to Nature—gaping, goggling, brawny monstrosities—filled a mind as wilful and as warped as Haydon's. Fuseli looked at Nature with a squint. He painted ghosts, and he was the ghost of a painter;—he knew light and shade, and used his light to illuminate the shades, and his shade to make us long for light. He learned anatomy, and determined to become a Buonarrotti. He was like a man who buys a property-room, and determines to become a Shakespeare. He knew all the combinations of muscles, and peopled Heaven with strong developed calves and flabby arms. All his life was an impetuous dream of Art yet to be born. Mr. Leslie says he was a perfect master of "the evanescence of colour." Sneering Northcote tells us he would sweep his thumb round his palette and smear it on his canvas, and say complacently, "My Gott! is not dat ver like Teeshian?"

Of amiable Stothard, Mr. Leslie discourses pleasingly, rating him too high, of course, forgetting his pretty mannerisms; and remarks the growth of Art from Fuseli the Swiss, to Stothard the Englishman. Of the versatility of his mind, our author says:—

"For more than half a century Stothard was engaged in illustrating not only the contemporary literature of his country, but the works of her best poets, from the time of Chaucer to his own; his employers, with the exception occasionally of the goldsmiths, being the booksellers. By these he was engaged in every species of composition, from illustrations of Homer and Shakspeare, to designs for spelling-books and pocket almanacs, fashions for the *Ladies' Magazine*, portraits of popular actors and actresses in character, as well as other subjects of the day, such as 'Balls at St. James', 'The Employments of the Royal Family', 'The King going out with the Fox Hounds,' &c., and numbers of his early designs are from novels and poems, the very names of which are now only preserved in his beautiful art. By the goldsmiths he was employed in designing ornaments for plate, from the Wellington Shield to spoon-handles for George the Fourth."

The taste of an artist turned tradesman made Stothard's works little but graceful sketches. At the close of his life, he exclaimed, "I feel that I have not done what I might have done;—a late penitence, indicating more of aspiration than power. We cannot say he reminds us of Raphael or of Rubens. Beside one he is a mere purveyor of plum-box nymphs;—by the other, an elegant posture-maker. We agree, however, with the author in pronouncing the illustrations of Pilgrim's Progress and Robinson Crusoe his best works. That Flaxman, a sculptor, would like a painter whose style is conventionalised from limited antique drawing, we can quite imagine; but we do not care to know that Mr. Stothard once said, as he walked down Fleet Street, that "Nothing was so difficult to paint as people doing nothing." We agree with our artistic Boswell in this dictum—with one exception: there is only one thing more difficult, and that is, *painting people doing something*. Though his 'Wife of Bath' is a failure, Stothard had a quiet, *paterfamilias* sort of humour. We quote our 'Hand-book.'—

"His constant friend, the venerable author of the 'Pleasures of Memory,' possesses many of the finest of his works, and delights in pointing out the refinements of expression with which they abound. Among them is a vignette drawing of the Turk who, in the Arabian story, sees his turban, the folds of which contain his money, carried away by a kite. The bewildered Mussulman claps his hands on his bald head, as if the evidence of one sense were not sufficient to assure him of his loss. In a design, the subject of which is Gil Blas attending his master, the Canon, at dinner, Mr. Rogers noticed to me that the old epicure while putting a spoonful of soup into his mouth, is devouring with his eyes a dish which Gil Blas is about to place on the table."

Stothard, we are told, like Hogarth, had seldom recourse to a model; and this wilful departure from Nature our guide to youth recommends.

Better for them both had they had more. Then would Hogarth have given us better colour and Stothard less monotony. Of Stothard's habits we hear:—

"When not engaged at his easel, his time was almost always spent in long walks through the streets and suburbs of London. In the summer he was fond of country excursions, and for one entire summer, as I have heard him say, he and one or two companions lived in a tent, on the banks of the Medway, where they hired a boat and spent days in sailing."

Of dear old Bewick, simple and true, Mr. Leslie gives us some interesting remarks.—

"The charming vignettes that ornament these books abound in incidents from real life, diversified by genuine humour, as well as by the truest pathos,—of which the single figure of a shipwrecked sailor saying his prayers on a rock, with the waves rising around him, is an instance. There is often in these little things a deep meaning that places his art on a level with styles which the world is apt to consider as greatly above it,—in proof of which I would mention the party of boys playing at soldiers among graves, and mounted on a row of upright tombstones for horses; while for quaint humour, extracted from a very simple source, may be noticed a procession of geese which have just waddled through a stream, while their line of march is continued by a row of stepping-stones."

Mr. Leslie seems uncertain whether Wilkie had the gifts of colour and imagination. He had one as much as the other; that is to say, he possessed neither. His colouring was decent, his imagination was remembrance. To the prudent ambition and fantasies of his later life Mr. Leslie is too lenient. "*De mortuis nil nisi bonum*" is injustice to the living who are suffering, and unjust to the dead who have ceased to care or toil. He says, with kind and genial criticism,—

"The picture which I believe would be selected by painters from among all his works as the most perfect specimen of his art, is that of the 'Whiskey Still,' painted for Sir Willoughby Gordon. It is an extremely simple composition, containing but three figures. An old Highlander is holding up a glass of whiskey to the light, and seems to be smacking his lips with the relish of a perfect connoisseur, while a boy is pouring some of the spirit into a jug, and a man in the background is looking toward the Highlander. Not only in character, but in the entire treatment, in colour and execution, this masterly work leaves nothing to be desired."

Of Wilkie's private habits we have an interesting anecdote.—

"Wilkie took great pleasure in arranging *tableaux vivants* for the amusement of his friends. I remember seeing, at his house, such representations of Vandyke's Cardinal Bentivoglio, his whole-length of Charles the First in his robes, and other well-known pictures. As may be supposed, they were remarkably well imitated, the company were delighted, and one gentleman went so far as to say, 'I shall never enjoy pictures again.'"

The following is an interesting anecdote of the Prince of Dilettanti, who took it on him to confer the tributary sceptre of Art.—

"Sir George Beaumont, who had possessed himself of Hogarth's mahl-stick, determined to keep it till a painter should appear worthy to receive it; and he kept it till he saw 'The Village Politicians' of Wilkie. Sir George, who had been insensible to the extent and variety of Stothard's powers, hailed with great delight the far more matter-of-fact style of the young Scot."

For Mr. Leslie's defence of the Academy we do not care much. He says Hogarth acquired his knowledge of the human figure (never very large) in an Academy. If an Academy means a collection of wooden heads and stone figures, any private person can now buy these; and Opie's Lectures are perhaps as good as—Barry's. Reynolds lamented he never studied in an Academy; but human nature is not confined to Trafalgar Square.

Even about Reynolds Mr. Leslie has something new to say, and this time something really illustrative of character and not trifling or insignificant. Reynolds, the childless man, painted children well because he loved children. He could return for a time to childhood and share their amusements, their transient sorrows and their redundant joy.—

"That the portraits of Reynolds were the best of all likenesses, I have no manner of doubt. I know several of his pictures of children, the originals of whom I have seen in middle and old age, and in every instance I could discover much likeness. He painted Lord Melbourne when a boy, and with that genuine laugh that was so characteristic of the future Prime Minister at every period of his life; and no likeness between a child and a man of sixty (an age at which I remember Lord Melbourne) was ever more striking. Lord Melbourne recollected that Sir Joshua bribed him to sit, by giving him a ride on his foot, and said, 'If you behave well you shall have another ride.' His fondness of children is recorded on all his canvases in which they appear. A matchless picture of Miss Bows, a beautiful laughing child caressing a dog, was sold a few years ago at auction, and cheaply, at a thousand guineas. The father and mother of the little girl intended she should sit to Romney, who, at one time, more than divided the

town with Reynolds. Sir George Beaumont, however, advised them to employ Sir Joshua.—'But his pictures fade.'—'No matter, take the chance; even a faded picture by Reynolds will be the finest thing you can have. Ask him to dine with you; and let him become acquainted with her.'—The advice was taken; the little girl was placed beside Sir Joshua at the table, where he amused her so much with tricks and stories that she thought him the most charming man in the world, and the next day was delighted to be taken to his house, where she sat down with a face full of glee, the expression of which he caught at once and never lost; and the affair turned out every way happily, for the picture did not fade, and has, till now, escaped alike the inflictions of time or of the ignorant among cleaners."

Of Sir Thomas Lawrence's colour Mr. Leslie says, judiciously,—

"Sir Thomas Lawrence was perhaps hindered from rising to the highest rank as a colourist by his early and first practice of making portraits in colourless chalk only. His wish to please the sitter made him yield more than his English predecessors had done to the foolish desire of most people to be painted with a smile: though he was far from extending this indulgence to that extreme of a self-satisfied simper that the French painters of the age preceding his had introduced to portrait. Of indefatigable industry, Lawrence's habit of undertaking too many pictures at the same time was a serious drawback, in many cases, to their excellence. He began the portraits of children which he did not finish till they were grown up, and of gentlemen and ladies while their hair was of its first colour, but which remained incomplete in his rooms till the originals were grey."

Mr. Leslie defends Etty from the unjust charge of impurity, and gives us a pleasing sketch of his placid temper.—

"From my own knowledge, I am enabled to say of Etty, that his conduct as an Academician was invariably marked by the most unrelenting and disinterested zeal for the prosperity and honour of the society of which he was so distinguished an ornament. He considered, indeed, the welfare of the Academy as identical with the general welfare of the Arts of his country. Naturally shy, he never spoke at our meetings without a great effort, yet never was he silent on any occasion on which he thought he could serve the institution. There was a simplicity and sincerity in his manner that greatly attached his friends; and I never could discover in him the least sign of jealousy or other unworthy feeling towards any of his brother artists."

Of the illustrations we have to notice the timid line of the copies from Michael Angelo; on the other hand, the exquisite repose and beauty of the 'Night Scene,' by Rembrandt, in which the nurse is seen watching the cradle while the mother reads.

NEW PUBLICATIONS.

The Rhine: Monumental and Picturesque—[*Le Rhin, &c.*]. By MM. Fourmois, Lauters and Stroobant. Trübner & Co.

ONE number of 'The Rhine: Monumental and Picturesque,' is before us,—and if we may judge of the whole work by a single specimen, we infer that it will become the book of the Rhine. Seeing that the Rhine is the best known river in Europe—that its waters are waters of the imagination, like the lagoons at Venice, as well as a river of commerce like the Scheldt—that it has been painted in colours and in words by the greatest artists for three centuries—most gorgeously and recently by Turner and Victor Hugo—as well as in a thousand albums, gift-books and souvenirs,—it is something even for an artist to arrest attention with so worn a theme. This, however, MM. Fourmois and associates have done in the present number. It consists of three plates, with descriptive letter-press,—'The Chapel of the Three Kings' in Cologne Cathedral—'Gutenfels'—and 'The Old Entrepôt at Coblenz'; the last a very picturesque bit of old building. The several plates are lithographs in various tints.

Photographic Delineations of the Scenery, Architecture and Antiquities of Great Britain and Ireland. By Russel Sedgefield. Part I. Highley. THE first number of this valuable record of antiquarian art contains five illustrations:—the Norman Tower, Bury St. Edmunds, the Abbey Gate, Bury St. Edmunds, the South Transept, Norwich Cathedral, the West Front of Binham Priory, Norfolk, and Part of the Cloisters, Norwich Cathedral. For the antiquarians and architects to whom nothing is valuable without it be accurate this work will be of the utmost use. The artist is satisfied with good light and shade and colour, whether the original has it or not; he cannot sell without them;—the poet wants romance, suggestiveness and situation; and if he can get these, he will make up monstrous buildings for his backgrounds, half truth and half fancy;—but the historian and the architect want draw-

ings that can be given in on oath,—and the curve of a single moulding may fix an important date or overturn a theory.

At present we see no plan in this work. Why not collect first all your specimens of Norman, and proceed *seriatim* to the Early English and Decorated?—or, why not take a single country and exhaust it, from town to village?

Were it not for the imperfection of parts,—the dark blots and the slurring exaggeration of surfaces of light,—we could gaze at these scenes till our reason grew deceived by the reality of their atmosphere. The eye wanders untired over their exhaustless details, their variety of surface, the extraordinary subtlety and softness of light and shade,—taking in more at once than it could even in nature. We see the very aspect of the hour,—the air of the month and season,—the exact stage of decay, of hardness or softness, of rough and smooth,—and knowing that in all these phases nature teaches lessons of unity, at the heart of change, permanence surrounded by evanescence, the war of good and evil, of hope and despair, of night and day, of joy and sorrow, we find very impressive sermons in the shadows of such stones.

Portrait of Prof. Simpson, of Edinburgh, Discoverer of the Application of Chloroform. Schenk, Hahnisch; Edinburgh, M'Farlane.

WE cannot say much for this German lithograph of a Scotch worthy. The execution is woolly and weak,—the lines wanting in sharpness,—and the predominance of middle tint,—most false to English notions of bright colour, fresh air, clean skin and open-air effect. As the Professor is neither a Gipsy nor a Negro, we see no reason that he should be made so swarthy.

FINE-ART GOSSIP.—Mr. Wornum's appointment—announced by us last week—to the office of Secretary to the Trustees of the National Gallery, is not only, as we then said, an augury of reform in that great section of the public service, but is a reform already accomplished. Hitherto the office of Secretary has been little more than a sinecure, and has been held at the small salary of 150*l.* a year (with residence, and all that residence implies), by General Thwaites. The duties were few, and those chiefly clerical. A change for the better is now to be effected. Mr. Wornum's whole time and knowledge are secured for the public,—and the salary of the office is raised to 800*l.* a year. One of the first duties of the new Secretary, we understand, will be to make out a catalogue of all the great pictures in the world which, by probable events, are ever likely to come into the market—that is to say, of all known and authenticated works of great masters in private collections. Such a catalogue—difficult, but not impossible, to make—will be invaluable for Art-reference.

We regret to hear that Martin's celebrated picture of 'Belshazzar's Feast' was injured by the late railway accident beyond even the power of picture-restorers to injure it more.

A tribute has been paid to Art in appointing Prof. Kiss (the sculptor of the 'Amazon') President of the Society for the Advance of Art. Noblemen have hitherto held the post, which must have been to them rather a means of education than of enlightened patronage.

Prof. Hopfgarten, a German sculptor, is executing five colossal statues of Christ and the Evangelists, to decorate the Protestant Church at Wiesbaden.

A Correspondent sends us from Florence some notes of Mr. Powers's views on the question of Colour in Sculpture.—We entered on the *rexata questio* of colouring statuary; and as he represents the party who deprecate the use of it, as Mr. Gibson is at the head of those who, on the contrary, advocate it, I will briefly give the arguments by which he supported his views. It is not necessary, he said; and what is more, would interfere with the object aimed at by Sculpture. What is that? To embody and express the spiritual, the higher nature of man. Now, all expression, he contends, depends on form, not on colour. Intellectual energy—physical action, must be de-

scribed by form alone, colour can never give it; but colour will humanize, and mortalize, and pull down to earth the spiritual portion of humanity that you have been trying to separate from its grosser parts and to exalt. Colour, in short, represents the animal man;—Form, the intellectual, the spiritual. Imagine, for an instant, the Apollo Belvidere coloured. What is now an embodied, spiritualized, glorious man, would then become nothing more than a man in a body. Again, colour alone expresses nothing,—form alone, just the contrary. Test this assertion by looking at a clear blue Italian sky,—there is no meaning in it; but let a light cloud float over it, and what beauty is immediately imparted to the scene. But I maintain too, said Mr. Powers, that even were it desirable to make sculpture blend the spiritual with the animal, it would not be possible to do so. Give colour to the flesh,—it may be done. Well, carry out the principle, give eyes to your statue. You cannot. The glassy transparency of them is immediately obvious. Then the eye-lashes, and the brows, and the hair—it is impossible to represent them; but unless you can do this there will be a want of harmony in the figure, which will be ludicrous and disgusting. Try it in the human form,—say of a lovely girl. Imagine that she has a lovely form, a brilliant complexion, and then suppose her to be deprived of her eye-brows or eye-lashes, or to be gifted with a pair of glass eyes. What would be the effect?—and would this be less revolting in the statue?—The moral influences of humanized, or coloured, statuary, Mr. Powers contended at last, would be positively bad. No father could then take his daughter to the artist's studio. The animal man would be all in all:—the ideal man would be lost. Such are the views of Mr. Power on this disputed question; and I state them with the same freedom that I did those of Gibson some time since, on the opposite side of the question.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS. Willis's Rooms.—**FOURTH SEASON OF CLASSICAL INSTRUMENTAL CHAMBER MUSIC.** The Reserved Sofas of Subscribers, 1854, not claimed by the 1st of February, will be let to new applicants. The dates of the Concerts are Thursday, February 15, March 1, 15, 22, and 29. Subscription, 30s. Single Admission, Half-a-Guinea. Sofas for parties of five may be secured, and for schools a sixth admission will be given free, with reserved places. The best talent will be engaged. For a list of Patronesses and other particulars vide Prospectus and Records of the past seasons, at Cramer & Co.'s, Regent Street; Chappell & Co.'s, and Ollivier's, Bond Street. The Musical Union Record, of 1854, has been sent to members by post, Parcels Delivery, and messengers. Any omission will be rectified on applying to J. ELLA, Director.

CONCERTS OF THE WEEK.—M. Jullien reigns in all his pride at Covent Garden Theatre, to which his *Promenade Concerts* attract their usual crowds. The rueful air of dirty finery imparted to the theatre by the temporary decorations which conceal its more costly ornaments matters little. Crowds flock to hear Madame Pleyel play—Madame Pleyel being in her fullest force,—and to listen to Herr Ernst, who has a stronger hold on the public of England than any violinist since the days of Paganini, and on sounder grounds. Both the lady and gentleman perform the best music. Then, there is M. Jullien's orchestra, curiously divided betwixt the exhibition of treasure and trash—good overtures and the 'Allied Armies Quadrille.' When M. Jullien, however, is avowedly nonsensical he can be very droll. His 'Pantomime Quadrille' is a real, honest piece of Christmas fun,—as good, after its kind, as the fairy coach, with its punch-bowl body and plum-pudding wheels, at Drury Lane.—The New Year has had other music for its opening, in addition to that which "cheers and inebriates" the nightly crowd at the *Royal Italian Opera*. Herr Goffrie's second chamber concert has taken place:—an entertainment of choice quality,—the programme of which, besides standard Quartetts, &c., led by Herr Ernst, included M. Benedict's new *Sonata* for pianoforte and violin.—'Elijah' was to be given by the *Sacred Harmonic Society* last evening.

NEW PHILHARMONIC SOCIETY.—The prospectus of the *New Philharmonic Society* is now before us, confirming the rumours of its junction with a large body of choral amateurs, belonging to another

society, and of its re-establishment at Exeter Hall—announcing that M. Berlioz is engaged to conduct its concerts, conjointly with Dr. Wyld,—that the concerts will be held monthly,—adding that at the first concert, which will take place early in February, Cherubini's Mass in c will be performed. It is further stated, "that the proceeds of the six concerts will be given in aid of the funds of sundry charitable institutions," three of which are named, followed by a long list of patrons and patronesses, &c. The prospectus laid before the *Athenæum* is accompanied by a letter from the Corresponding Secretary, having reference to the remarks which appeared not long ago in our columns,—and of which the following portion is important.

"I beg to be allowed to state, that the New Philharmonic Society do not intend, as you imply, to ask the artists they require to give their services gratuitously, but that they intend to pay them as liberally and regularly as it has always done. That the same care and amount of money will be bestowed in the production of the works of the great masters as when the Society was first established; that the orchestra will be increased, not diminished, in strength and numbers; that the pecuniary affairs of the Society are in a most prosperous condition, in consequence of the gradual but great increase of the subscription list; and that it is not intended to depart from the objects for which the Society was at first established, viz., the cultivation of music of the highest order and the support and encouragement of living composers; but that, in consequence of its present financial prosperity, it has been resolved to appropriate the surplus funds arising from the performances to several institutions requiring pecuniary assistance; and consequently the Directors, consisting of a number of noblemen and gentlemen, some of whom, for the love and encouragement of the art, have borne, jointly with Dr. Wyld, the founder, the expense of the establishment of the Society, by acceding to the resolution mentioned, consent voluntarily to give up all pecuniary interest in it, feeling themselves amply rewarded in knowing that their assistance has given an impetus to the progress of art in this country."

The above contains a point or two which every one will be glad to see established. We are glad to receive an official pledge that the artists who will appear at the *New Philharmonic Concerts* are one and all to be paid as "liberally and regularly" as formerly. The *New Philharmonic Society*, too, is, in the above letter, placed at last on its right basis, as Dr. Wyld's society; since, as regards the public, anonymous Directors are equivalent to no Directors at all.—But a question or two have still to be asked. Does the list of patrons and patronesses in the printed programme belong to the *New Philharmonic Society* or to the charities by aid of which it is seeking to bring itself forward? We make such inquiry, because the printed address is less assured in its language than the letter forwarded to us for publication,—since, whereas the latter speaks with confidence of "pecuniary affairs in a most prosperous condition," the former is more conditional,—as follows.

"The prospect of a still increasing subscription, together with the incorporation of a large body of the members of another society, will, it is believed, leave a considerable balance in the hands of the Treasurer next season; and it is proposed to place any such balance to the highest and best purposes to which the art of music can be applied, namely, to exclusively charitable objects."

Then follows another paragraph, ambiguously worded.

"The idea of making music subservient to the cause of charity is one which has frequently resulted in the production of the grandest inspirations of genius. For example, the 'Elijah,' of Mendelssohn, composed in aid of the Birmingham charities; the 'Crucifixion' of Spohr, written for a similar purpose at Norwich; while we owe that monument of Handel's mighty genius, the 'Messiah,' to a performance for the benefit of the Foundling Hospital."

The above is calculated to mislead lovers of music and directors of charitable institutions. 'Elijah' was not composed "in aid" of charity by Mendelssohn, but secured as an attraction by the Birmingham Committee of charitable directors. Such, too, if we mistake not, was the history of Dr. Spohr's 'Crucifixion' at Norwich. In both instances Charity sought to fill its scrip by honourably retaining the advocacy of Art. In Dr. Wyld's society Art seems desirous of advertising itself by begging Charity to lend its mantle. The cases are diametrically opposite; and it is this vital difference betwixt them which, from the first, we have been anxious to explain and establish.

THE ORATORIO OF M. BERLIOZ.—As prefatory to any report of our own on the new composition by M. Berlioz, 'L'Enfance de Christ,' which seems to have created a real sensation in Paris, we will offer a condensed account of the

Oratorio from the article by M. d'Ortigue, in the *Journal des Débats*.—The trilogy is arranged in the form of soliloquy, narrative, dramatic dialogue interspersed with choruses and descriptive instrumental music. The first part, entitled 'The Dream of Herod,' contains, among other movements, a night march of the guards of the despot,—an air for Herod, in which M. d'Ortigue states, a new scale, such as the ear can accept, is established,—an instrumental scene for Herod's soothsayers who assemble to dispel, by their magic, the terrors threatening the King (in which a seven-bar rhythm is effectively used),—and an air for "Mary Mother," with a distant chorus of angels. This first part is an after-thought, and was composed in completion of a work originally begun rather in caprice than by serious design. M. Berlioz has himself told us that what is, at present, its second part—'The Flight into Egypt'—was many years ago put forward by him as the work of an apocryphal French chapel master,—having, to carry out the mystification, written in an assumed style. The favourable reception given to the air 'The Repose of the Holy Family' after it had for many years been laid by, led M. Berlioz again to take up his *Cantata*, reconsider and extend it;—by adding, first, the 'Arrival of Sais,' as third part,—lastly, the introductory portion which has been mentioned. Thus, also, have canvases have been enlarged by their painters after pictures have been begun;—thus, to note a more intimate precedent, Handel, by adding an act to his *Cantata* 'Exodus,' produced that most gigantic of his Oratorios, 'Israel in Egypt.' To return—in this third part, 'The Arrival,' the leading feature is the hospitable reception in the carpenter's house of the travel-worn fugitives, including, among other original movements, a *trio* of two flutes and harp,—the trilogy being wound up by a mystical chorus, without accompaniment. The text of this Oratorio, by M. Berlioz himself, is described as being a fair imitation of the direct, child-like style of the ancient French Noël or "Mystery." The orchestra is admired by M. d'Ortigue, and other French critics, as being ingenious and delicate, rather than relying for its interest on those elaborate and ambitious combinations by which M. Berlioz has been chiefly known.—The *solos* were sung by Madame Meillet, MM. Meillet, Depassio, Battaille, Noir, and M. Jourdan, to whom the narrative portion of the Oratorio (including the scene of 'The Repose') was entrusted.

DRURY LANE.—This house promises novelty, if we may judge from the fact of a new piece being produced on the first Monday after Christmas. It is true that it is not an affair of weight or magnitude, and was not entirely well received; but the responsibility of its deficiencies lies on Mr. Dion Bourcicault, who has adapted it from some foreign source. It is entitled 'Eugenie,'—the heroine so named being sacrificed by a faithless lover and a gambling brother. Miss Marriott, who made her *début* last week in the character of *Bianca*, and was tolerably successful, supported the part of poor *Eugenie*. She intoned her sorrows with emphasis, and poured her reproaches into the ears of both delinquents with much force and feeling. Mr. Belton, as *George Tarleton*, incurred the displeasure of the audience for his inconstancy, which, however, he did his best to make interesting. But the action was compressed into too narrow a compass to admit of proper development, and the changes of mental mood followed so rapidly that they necessarily appeared absurd, particularly with a Christmas audience, always on the look-out for the ridiculous. *Eugenie's* rival is *La Marchesa Giulia Orsini* (Mrs. Lingham),—a sketch not without power, and creditably performed. But it is wanting in contrast, being as much like the heroine as possible in the depth and tone of passion, with an additional tragic element, the sentiment of revenge for a motive, which lends a strength to the part that serves to subordinate the principal. We dwell on these particulars in order to warn the management that a drama is not necessarily safe or well constructed because derived from the French; and that probably

Mr. Bourcicault would have better catered for his own reputation and his employer's interest if he had trusted to his native talent and invented his story for himself. After the play the audience were restored to good humour, by the extraordinary *pas* of Mdlle. Bertha Mochlin, from Vienna, in one of her national dances;—and this state of feeling was further secured by the capital acting of Mr. Belton, as *Hector Timid*, in the favourite farce of 'The Dead Shot.' The part of *Louisa Lovetrick* was performed by a Miss Arden with great *verve* and spirit. The names of several of the company are new to us; and we trust that the wants of the management will lead to the discovery and production of original talent on these national boards. The house was full, and the *Pantomime*, which is certainly brilliant and elegant, was received with great interest. The trick of the Italian Brothers, who, for the first two or three nights, threw themselves from the gallery to the stage, by means of a wire suspended from the ceiling, is no longer ventured; the wire having, on Thursday night, broken through coming into contact with the chandelier, which swung fearfully to and fro, to the manifest peril of the audience,—the athlete himself being precipitated upon the boards with tremendous force. Such violent exhibitions are not in good taste, and we are indebted to the accident for a seasonable corrective.

MUSICAL AND DRAMATIC GOSSIP.—From across the Channel comes a chorus of rapture and delight in praise of 'Il Trovatore,' by Signor Verdi, just produced at the Italian Opera in Paris, and which is held by the admirers of the *Maestro* to have turned the tide of French connoisseurship, long dissentient, in favour of their favourite. The readers of the *Athenæum* in 1852 may recollect the sketch of this opera [No. 1356] by a Correspondent, who spoke of the work as one likely to become popular. They know, further, by this time what amount of reliance experience has disposed us to place on all reported musical raptures and delights in Paris. But this caution allowed for, 'Il Trovatore' appears to be the best expression of Signor Verdi's genius which he has produced; and, as such, justifies hope from future works by him,—since it seems a characteristic of Italian genius that it improves, not exhausts itself, by exercise. The singers are Mesdames Frezzolini and Borghi-Mamo, Signori Baucardé and Graziani, and M. Gassier. We shall doubtless have 'Il Trovatore' among the other productions of the London season.

The music performed on New Year's Day before Her Majesty at Windsor consisted of Beethoven's *Cantata*, 'The Praise of Music,' and Mendelssohn's 'First Walpurgis Night.'—It is announced that there will be no plays at Court this year.

Among the earliest musical arrivals from the Continent has been the return of Miss Stabbach from Leipzig.

Mr. Ella's *Winter Evenings* will commence on Thursday, the 15th of February.

A curious pianoforte may be seen at St. Martin's Hall. By newly arranging the movement belonging to the key-board, and by placing its flats and sharps in close ranks one behind the other, Mr. Hesketh Hughes, the inventor, brings many more notes within command of the player's hand than it can embrace on keyed instruments as they exist. That, however, which is gained in the extension of chords must, we apprehend, be lost in the working up of all passages of rapid, complicated, and brilliant execution, since the fingers can hardly fail to be in each others' way on the new keyboard; but we speak conjecturally, seeing that before the invention can be fairly tested, the whole art of playing the pianoforte must be studied anew,—and it is problematical if any one will devote the time necessary to the mastering of a *Concerto* by Hummel or of a *Study* by Chopin under entirely unforeseen conditions of fingering, for the purpose of proving such exercises possible. We are informed that the invention of Mr. Hughes can be applied to any pianoforte constructed on the old principle; but, at present, we are disposed to regard it as ingenious rather than generally

valuable.—While, on this subject, it may be mentioned that Mr. C. Salaman is about to deliver two lectures on keyed and stringed instruments, which, according to his *programme*, are to be illustrated by performances on, and exhibitions of, "rare and curious specimens of the ancient virginals, spinnett, single and double harpsichords," and "by diagrams of obsolete instruments." The first of these is fixed for Tuesday next.

We observe that a Professor in Paris is attempting to establish chamber-concerts of vocal music, as choice as the Quartett parties which are now recognized as a necessity wherever amateurs are found. This, we hope, may succeed; and by its success set the fashion. Not merely is there a mass of vocal music by those elder Italian and German composers who have been superseded by the more dramatic and symphonic writers of modern times, which it would be a real boon to hear, supposing the music carefully executed; but there is a large number of voices which might be profitably occupied in such tasks. The modern stage and orchestra are places of destruction rather than of display to delicate or feeble organs. There is, again, many a rare singer, no longer able to sustain "the burden and heat" of an entire opera, whose powers are still adequate to the execution of one or more *morceaux*,—supposing these presented in a moderately-sized room. Persons who are unwilling that any branch of Art should perish for the exaggerated glorification of one will feel that this French idea is worth working out, as one of importance. We are satisfied that there is a public for such music, as well as for the Quartetts of Haydn, or the posthumous mysteries of Beethoven,—as well as for the English glee or the German part-song.

Late researches have corrected the date formerly assigned to the birth of Weber. It is established that, in place of his having been born on the 20th of November, the composer of 'Der Freischütz' first saw the light on the 18th of December, 1786. The rectifier is the son of the great musician; who has just gained a dramatic success at Vienna. Such a fact, read in connexion with the examination of family papers, from which the discovery has resulted, encourages the hope that the life of Weber, for which we have frequently been told that copious materials exist, may at last be written by some one at once capable in right of literary skill, and fitted by relationship for the task. The biographies of the great musicians have too often fallen into hands unskilled or prejudiced.

M. Adam's new opera 'Le Muletier de Tolède,' which has been produced at the *Théâtre Lyrique* of Paris for Madame Cabel, appears to have succeeded moderately. The critics, too, are beginning to agree with the *Athenæum*, and to estimate the Lady as an executive songstress who falls a little short of the highest finish.—Herr Ferdinand Hiller's comic opera, which we duly announced, has been produced at Cologne. The music is spoken of as finely wrought, ingenious and clever. Something more is wanting to make a 'Matrimonio,' a 'Barbieri,' a 'Domino Noir,'—otherwise, a *real* comic opera.

The *Théâtre Français* has just lost by death Mdlle. Rimblot. She was a handsome person, whose principal occupation was to be substitute for Mdlle. Rachel, when the latter Lady was absent from Paris.

The play-bills of a week sometimes offer testimony as emphatic as though they were so many criticisms. The following seven days' bill of fare laid before the frequenters of the *Burg Theater* at Vienna, which we fell upon not long since in an Austrian paper, is curious, to say the least of it. The pieces advertised to be played are, 'A Midsummer Night's Dream,'—'A Little Romance,'—'My Star' (M. Scribe's comedy, we presume),—'The Stepfather,'—'The Gladiator of Ravenna' (Herr von Weber's new drama),—'King Lear,'—'The Valentine,'—'Clavigo,'—two short pieces, 'The Orphan of Lowood' ('Jane Eyre' dramatized, which seems to have become a stock play on the German stage), and 'Fiesco.' Compare this variety, as offered to resident or stranger for a week visiting Vienna, with temptations held out in our best London

theatres during a like period, and who shall wonder if accomplished Germans and enthusiasts, such as Herr Edouard Devrient, after passing a few days in London, write home letters full of wonder and despair touching the state of the acted drama in Shakespeare's country?—To make the comparison more complete, the reader is reminded that the acting at the *Burg Theater* has always been of the highest order.

MISCELLANEA

Reduction of French Postage.—A new postal treaty has been entered into with France, the principal effect of which will be the reduction of the postage upon prepaid letters weighing not more than $\frac{1}{4}$ oz. (a weight which includes the great majority) to 4d., instead of 8d. or 10d., as heretofore. This reduced postage of 4d. will carry the letter from any part of the United Kingdom to any part of France or Algeria. If the letter be posted unpaid, the charge will be double. Under the provisions of this treaty, the postage on letters passing through England or France will also, in many cases, be reduced. On all these points detailed information will be issued. The new treaty came into operation on the 1st inst.

Postage to Holland.—The following notice has been issued from the General Post Office:—"From the 1st of January, periodical works, not strictly newspapers, published in the United Kingdom, and addressed to Holland, may be sent in the close mails, *via* Belgium, under the following regulations:—1st. The British postage must be paid in advance. 2nd. They must be sent in covers open at the sides. The rates of postage on such works will be as follows:—Not exceeding 2 ounces in weight, 1d.; exceeding 2 ounces and not exceeding 3 ounces, 6d.; exceeding 3 ounces and not exceeding 4 ounces, 8d. 2d. being chargeable for every additional ounce, up to the weight of 16 ounces, beyond which weight no publication can be forwarded. From the same date, newspapers brought to this country in the mails from Holland will not be liable to any charge on delivery, as the postage paid by the sender will defray the whole charge to destination. In like manner, newspapers forwarded from the United Kingdom to Holland will not be liable to any charge on delivery, but a postage of 1d. must continue to be paid on each newspaper when posted.

Photographers.—"Sir,—You draw attention to a design of presenting a testimonial to Dr. Diamond, as an expression of 'gratitude,' by the photographic public. With all possible respect towards Dr. Diamond, to whose skill in manipulation, and great urbanity towards photographers, I can personally bear witness, I would beg to ask the above-mentioned public, Has it yet *substantially* acknowledged its gratitude to Mr. Archer, whose claims thereto no one can dispute? Does it recollect that a 'poor miniature painter' (his own words) is at this moment, *almost single-handed*, fighting his battles against one in possession of all the power that money and prestige command?"

"Yours, &c., T. B. HOCKIN."

Widening of London Bridge.—It has been resolved by the competent authorities to give up the entire present width of London Bridge, both road and footway, to rolling traffic, and to provide for passengers by making footpaths on projections to be constructed along either side of the bridge. The resolution was taken at a meeting of the London Bridge Committee. As a considerable time will be occupied in carrying out the change, the Committee came to a determination to try in the mean time the experiment of confining the heavy traffic each way to one line, and leaving the whole of the centre open for quick traffic. Notice boards will be placed at each end of the bridge, giving notice that, after a given day all heavy, slow-going carriages will be required to keep close to the kerb, and only such carriages as go at a trotting pace will be allowed to occupy the centre of the bridge. It is expected that the experiment will prove extremely serviceable in facilitating the means of transit for the enormously increased traffic of London.

TO CORRESPONDENTS.—H. H. M.—W. W.—Justice—J. B.—J. B. J.—C. P. R.—B. B.—J. O. M.—Civis—received.

On the 6th of January, 1855, the First Number of a

NEW VOLUME

OF

THE MEDICAL TIMES AND GAZETTE.

This Journal is selected by the most eminent men in the Medical Profession as the medium through which their latest discoveries and observations are made known, and for the publication of the Official Reports of the Army and Navy Medical Boards. It has thus acquired a character and influence not possessed by any other Medical Periodical. Each Number contains one or more LECTURES by some popular teacher—ORIGINAL COMMUNICATIONS from Members of the Profession in all parts of the kingdom—a Report of Cases observed in the PRACTICE of the principal London and Provincial Hospitals—EDITORIAL ARTICLES on questions interesting to the Profession, socially and politically—REVIEWS of New Books—SELECTIONS from FOREIGN JOURNALS—REPORTS of MEDICAL SOCIETIES—GENERAL CORRESPONDENCE and MEDICAL NEWS. It thus becomes a faithful record of the progress of Medical Science, and enables Subscribers in any part of the World to become acquainted with the latest advances in Medical Science and every practical improvement.

The New Volume will contain—

A Course of Lectures on Certain Diseases of the Brain. By R. B. TODD, M.D. F.R.S. Physician to King's College Hospital.

A Course of Lectures on Certain Diseases of the Ear. By J. TOYNBEE, Esq. F.R.S. Aural Surgeon to St. Mary's Hospital.

Dr. STOKES'S Clinical Lectures on Fever, and Dr. BENGE JONES'S Lectures on Materia Medica, will be continued.

The most eminent Hospital Physicians and Surgeons will contribute Clinical Lectures.

A Series of Papers on the Diseases of Children. By Dr. JENNER, Physician to the Hospital for Children.

Practical Essays on Plastic Surgery. By Mr. SPENCER WELLS.

Communications in Midwifery and the Diseases of Women. By Drs. RAMSBOTHAM, RIGBY, SAVAGE, WALLER, &c.

Published Weekly, price 7d.; stamped for post, 8d.; and regularly forwarded to all parts of India and the Colonies, and supplied by every Newsman and Bookseller.

Terms of Subscription.

Published by JOHN CHURCHILL, New Burlington-street.

BOOKS PUBLISHED BY Mr. VAN VOORST during 1854.

SCENERY, SCIENCE, and ART;

Being Extracts from the Note-Book of a Geologist and Mining Engineer. By PROFESSOR ANSTED, M.A. F.R.S. 8vo. Illustrated, 10s. 6d.

A MANUAL of NATURAL HISTORY,

For the Use of Travellers; being a Description of the Families of the Animal and Vegetable Kingdoms; with Remarks on the Practical Study of Geology and Meteorology. To which are appended, Directions for Collecting and Preserving. By ARTHUR ADAMS, M.A.C.S., WM. BALFOUR BLAIR, M.D., and CHARLES GARRON, Curator of the Royal Museum at Glasgow. Post 8vo. price 12s.

GEODEPHAGA BRITANNICA.

A Monograph of the CARNIVOROUS GROUND BEETLES indigenous to the BRITISH ISLES. By J. F. DAWSON, LL.B. 8vo. with Three Coloured Plates, 12s.

THE AQUARIUM:

An UNVEILING of the WONDERS of the DEEP SEA. By P. H. GOSSE, A.L.S. Post 8vo. with Coloured and Uncoloured Illustrations, 17s.

GRAY'S ELEGY WRITTEN IN A COUNTRY CHURCHYARD.

With a Woodcut Illustrative Head-piece to each of the 32 pages. Small Paper Edition. Fcap. 8vo. 2s. 6d.

MICROGRAPHIC DICTIONARY:

A Guide to the Examination and Investigation of the Structure and Nature of Microscopic Objects. By J. W. GRIFFITH, M.D. F.R.S. &c., and ARTHUR HENFREY, F.R.S. F.L.S. &c. In Twelve Half-a-Crown Monthly Parts. Illustrated by 40 Plates and 800 Engravings on Wood. Parts I. to V.

THE SEA-SIDE BOOK.

By PROFESSOR HARVEY. Third Edition. With a Chapter on FISH and FISH DIET, by Mr. YARRELL. Fcap. 8vo. 3s.

BIBLIOGRAPHICAL CATALOGUE of PRIVATELY PRINTED BOOKS.

By JOHN MARTIN, F.S.A. Librarian, Woburn Abbey. Second Edition. 8vo. 21s.

A HISTORY of BRITISH FERNS.

By EDWARD NEWMAN. Third Edition. 8vo. 18s.

THE ENTOMOLOGIST'S ANNUAL for 1855.

Comprising Notices of New British Insects detected in 1854. Edited by H. T. SAINTON. 12mo. 2s. 6d.

WARDIAN CASES for PLANTS, and their APPLICATION.

The substance of a Lecture delivered at the Royal Institution, on Friday, March 17, 1854. By STEPHEN H. WARD, M.D. Lond. Post 8vo. sewed, price 1s.

INSECTA MADERENSIA;

Being an Account of the Insects of the Islands of the Madeira Group. By T. VERNON WOLLASTON, M.A. F.L.S. 4to. With 13 Coloured Plates of Beetles, price 2l. 2s.

ADAMS'S GENERA of RECENT MOLLUSCA.

8vo. 2s. 6d.; or royal 8vo. with the Animals Coloured, 5s. Parts IX. to XVIII.

HEWITSON'S COLOURED ILLUS- TRATIONS of the EGGS of BRI- TISH BIRDS.

Second Edition. Parts IX. to XX. 2s. 6d. each.

HEWITSON'S EXOTIC BUTTER- FLIES.

Parts IX. to XI. at 5s. each.

INSTRUMENTA ECCLESIASTICA.

4to. Second Series, Part X. 2s. 6d.

SOWERBY'S THESAURUS CON- CHYLIIORUM.

Imperial 8vo. Part XV. price 1l. 5s. Coloured.

JOHN VAN VOORST, 1, Paternoster-row.

Just ready, price One Shilling.

SONNETS ON THE WAR.

BY
ALEXANDER SMITH,

AND BY
The Author of 'Balder' and 'The Roman.'
David Bogue, Fleet-street.

GEORGE CRUIKSHANK'S FAIRY LIBRARY.

Just ready, price 1s. with Ten Steel Engravings,

CINDERELLA and the GLASS SLIPPER. Edited and Illustrated by GEORGE CRUIKSHANK,

and forming No. 3 of George Cruikshank's Fairy Library. "We advise every one who has children to please to put this Fairy Library into their hands. More perfectly illustrated such tales never have been, and never again are likely to be. We reckon these pictures, in a word, as amongst the very best works of Cruikshank's genius, and we look forward with a sort of childish longing to the day when we shall have more of them to look at." *Examiner*.

David Bogue, Fleet-street.

NEW ILLUSTRATED BOOKS FOR PRESENTS.

I. MILTON'S L'ALLEGRO AND IL PENSEROSO.

With Thirty Illustrations drawn and etched by Birket Foster. The Text printed in red. In a richly ornamental binding, imp. 8vo. 21s.

II. LONGFELLOW'S GOLDEN LEGEND.

New and Revised Edition, with Notes, and Fifty Engravings on Wood from Drawings by Birket Foster and Jane E. Hay; uniform with the same Artists' 'Evangeline,' &c. Crown 8vo. handsomely bound, 12s.; morocco, 21s.

III. THE KEEPSAKE for 1855.

Edited by MISS POWER.

With beautifully finished Engravings from Drawings by the first Artists, engraved under the superintendence of Mr. F. A. Heath. Price 21s. elegantly bound.

IV. WEARYFOOT COMMON.

A Tale. By LEITCH RITCHIE. With Six Illustrations by M. E. Dear. 5s. cloth.

V. THE COURT ALBUM;

Or Book of Beauty for 1855.

A Series of Charming Portraits of the Young Female Nobility. Beautifully engraved from Drawings by the best Artists; with Biographical and Historical Memoirs. In a handsome binding, 21s.; with Coloured Plates, 42s.

VI. CHRISTMAS WITH THE POETS.

Embellished with Fifty-three Tinted Illustrations by Birket Foster, and with Initial Letters and other Ornaments printed in Gold. Third Edition, richly bound, 25s.; morocco, 35s.

David Bogue, Fleet-street.

NEW PRESENT BOOKS FOR BOYS.

I. THE FOREST EXILES;

OR
The Perils of a Peruvian Family amid the Wilds of the Amazon.

By Captain MAYNE REID.

Author of 'The Boyhunters,' &c.

Foolscap 8vo. with Twelve Illustrations. 7s. cloth.

"Full of startling events, marvellous incidents, and hair-breadth 'scapes which almost take one's breath away while he reads, and the wonder in every case is by what extraordinary dexterity and ingenuity his personages escape the many perilous adventures in which they are engaged, and which are so delightfully exciting when read by a winter's fireside."—*Observer*.

"The tale is lifelike and animating—and the descriptions of forest life have a freshness quite peculiar to their story-teller."—*Athenæum*.

II. THE STORY OF THE PEASANT-BOY PHILOSOPHER.

By HENRY MAYHEW.

With Illustrations by John Gilbert. Fcap. 6s. cloth.

"Worth a wilderness of mere Christmas books."—*Athenæum*.
"The incidents of it are simple, but very interesting. They are told with the grace and feeling of Goldsmith, and by one who has that knowledge of science which Goldsmith lacked. It is as if Brewster and poor 'Goldy' had combined to produce this instructive and beautifully told tale."—*Era*.

III. HISTORY FOR BOYS;

Or, Annals of the Nations of Modern Europe.

By JOHN G. EDGAR, Author of 'Boyhood of Great Men.'

With Engravings. Fcap. 6s. cloth.

"Eminently fitted to create a taste for historical studies in boys. More attractive historical sketches for young people were never written. They concentrate a vast amount of information, and cannot fail to give their readers a sense of the uses and importance of historical knowledge."—*Nonconformist*.

David Bogue, Fleet-street.

STANDARD FRENCH SCHOOL BOOKS,

By the late M. DE ROUILLON.

GRAMMATICAL INSTITUTES of

the FRENCH LANGUAGE; or, the Teacher's French Assistant: containing a Series of Theoretical, Practical, and Progressive Lessons, in which every difficulty is explained, either in Notes at the end of each Exercise, or by References to preceding Rules. Twenty-fourth Thousand. 12mo. 3s. half-bound.—KEY to ditto, 3s.

2.

EXERCISES on FRENCH CONVERSATION; or, a Selection of English Sentences to be translated into French, and in which the difference of the Idioms, Genus, and Phrasology of the French and English Languages may be readily distinguished. 6th Edition, 15mo. 3s. 6d. half bound.—KEY to ditto, 2s.

3.

TOURIST'S FRENCH COMPANION; or, Familiar Conversations on every Subject which can be useful to the Continental Traveller or the French Student in general. 4th Edition, 15mo. half-bound 4s. 6d.

* * * The sale of nearly 40,000 copies of this work strongly attests its value. The sentences are expressed in elegant language; and, in order to facilitate the pronunciation, the *silent letters* are printed in *italics*.

4.

ELEMENTS of FRENCH PRO-NUNCIATION. 3rd Edition, 8vo. sewed, 1s. London: Longman & Co.; Simpkin, Marshall & Co.; Hamilton & Co.; Whittaker & Co.; W. Allan; C. H. Law; Aylott & Jones, Norwich: C. Musket, and all Booksellers.

VALUABLE BOOKS, warranted perfect and in good condition, ON SALE, at extremely moderate prices, by WILLIAM NIELD, 12, DAVENPORT, Berkeley-square. Walton's Angler, royal 8vo. 1815, large paper, illustrated with nearly 250 additional Plates of Portraits, Views, &c., several of which are scarce, russia extra, gilt edges, 4l. 14s. 6d.

Characters of Eminent Men in the Reigns of Charles I. and II. and the Rebellion, 4to. large paper, illustrated with above 100 fine and interesting Portraits, calf extra, 2l. 7s.

Harris's Life and Writings of James I. 8vo. 1753, illustrated with 70 Portraits and Plates, russia gilt, gilt edges, 35s.

Dugdale's Monasticon Anglicanum, translated, folio, 1718, 104 Plates by Hollar and King, folio, russia extra, with joints and gilt edges, 2l. 12s. 6d.

Hogarth's Works, engraved by Himself, with the Suppressed Plates, 153 fine Engravings, atlas folio, superbly bound in half-red morocco, gilt edges, 6l.

Owen Jones's Illuminated Books of the Middle Ages, 39 exquisite Plates in gold and colours after the finest Medieval Illuminations, folio, large paper, sumptuously bound in half-red morocco, gilt edges, 7l. 7s.

Several copies in common stamped binding were recently sold by public auction at 9l. and 10l. each.

Gally Knight's Ecclesiastical Architecture of Italy, 81 beautiful Plates, both Series, 2 vols. folio, half-morocco, 6l.

Froissart's Chronicles, illustrated with 73 fine Illuminated Plates in gold and colours from Ancient Manuscripts, 2 vols. royal 8vo. half-morocco, gilt edges, 3l. 15s.

L'Espagne Artistique et Monumentale, 96 magnificent Views of the finest objects in Spain, 2 vols. folio, half-morocco, gilt edges, 7l. 18s.

Pugin's Glossary of Ecclesiastical Ornament and Costume, 63 splendid Plates in gold and colours, 4to. elegantly bound, 4l. 18s.

Strutt's Dresses and Habits of the People of England, from the Saxon Era to the Present Time, 153 coloured Plates, 2 vols. 4to. half-morocco, 4l. 18s.

Strutt's Regal and Ecclesiastical Antiquities, 72 coloured Plates of Authentic Portraits of the Monarchs and Contemp. rare Paintings of Important Events, 4to. half-morocco, 2l. 8s.

Beloe's Anecdotes of Literature, and Scarce Books, 6 vols. 8vo. fine copy, half-calf, gilt, 35s.

Contes de La Fontaine, Cuts by De Hoogh, 12mo. 1732, calf, gilt edges, 9s.

Fielding's Complete Works, 12 vols. small 8vo. calf gilt, 18s.

Collection of Old Plays, with Book-Plate of Gibbon, the Historian, 17 vols. 12mo. calf gilt, 18s.

Pope's Works and Translations of Homer, by Warburton, Plates, 15 vols. small 8vo. calf gilt, 24s.

Sterne's Works, Best Edition, Hogarth's Plates, 10 vols. small 8vo. 1788, calf gilt, 24s.

Swift's Works, complete, 24 vols. small 8vo. 1766, calf gilt, 21s.

Blunt's Lectures on Our Lord's History, 3 vols. calf, 9s. 6d.

Tom Brown's Works, Plates, 4 vols. 12mo. half-calf, 12s. 6d.

Burton's Anatomy of Melancholy, 2 vols. 8vo. half-calf, 9s. 6d.

Douce's Illustrations of Shakespeare, 8vo. calf extra, 10s. 6d.

Dénon's Travels in Egypt, Plates, 3 vols. 8vo. neat, 7s. 6d.

New Foundling Hospital for Wit, 6 vols. 12mo. calf, 6s.

Selection of Curious Articles from the *Gentleman's Magazine*, 4 vols. 8vo. half-calf, 14s.

Hearne's Collection of Curious Discourses, 2 vols. 8vo. 1775, calf, 10s. 6d.

ELEMENTARY WORKS

PUBLISHED BY

WILLIAM BLACKWOOD & SONS.

NEW GEOGRAPHICAL WORKS

BY

ALEX. KEITH JOHNSTON, F.R.S.E., &c.

Geographer in Ordinary to Her Majesty for Scotland,

Author of the 'Physical Atlas,' &c.

SCHOOL ATLAS of PHYSICAL GEOGRAPHY.

18 Maps, imperial 4to. half-bound in 8vo. 12s. 6d.

SCHOOL ATLAS of CLASSICAL GEOGRAPHY.

20 Maps, with Index, imperial 4to. half-bound in 8vo. 12s. 6d.

SCHOOL ATLAS of GENERAL and DESCRIPTIVE GEOGRAPHY.

22 Maps, with Index, imperial 4to. half-bound in 8vo. 12s. 6d.

SCHOOL ATLAS of ASTRONOMY.

Edited by J. R. HIND, F.R.A.S. [In the Press.]

ELEMENTARY SCHOOL ATLAS.

20 Maps, including a Map of Canaan and Palestine, and Index. Demy 4to. 7s. 6d.

GEOGRAPHICAL PROJECTIONS.

In a Portfolio, 2s. 6d.

These Atlases lay claim to a degree of accuracy and an amount of information not hitherto attempted in Educational Works. The Maps have been constructed with a special view to the purposes of sound instruction, and are not copied from any existing Atlas; hence they will be found free from the common faults of overcrowding and confusion with which so many School Atlases are justly chargeable. By means of a new process of production, the Maps combine the accuracy and neatness of the highest style of Engraving with a mechanical application of Colours; the effect of which is to secure a clearness, correctness and elegance unapproached by former methods.

ELEMENTS of PHYSICAL and CLASSICAL GEOGRAPHY.

Comprising the Geography of the Ancient World, in so far as it is subservient to the understanding of the Classics. With an Introduction. By

Professor PILLANS, of the University of Edinburgh. 4s.

With Notes by a NATURALIST.

TWENTY PHOTOGRAPHS, after Drawings by J. B. Imperial 4to. price 2l. 2s.

Testimony of Sir Edwin Landseer.

"If any praise from me can add to the popularity of this charming work, I have great pleasure in repeating my sincere admiration for its extreme originality of conception and admirable accuracy of knowledge of the creatures delineated. Having studied animals during my whole life, perhaps my testimony as to the truth of the artist's treatment of the Scriptural Illustrations may have some influence."

Edinburgh: THOMAS CONSTABLE & Co. London: HAMILTON, ADAMS & Co.; and ACKERMANN & Co.
Dublin: JAMES M'GLASHAN.

RE-ISSUE in HALF-A-CROWN PARTS, each containing TEN COLOURED PLATES.

Assortment of the finest TRANSPARENT ALBUMEN
 PICTURES on Glass including the newest subjects, at the
 following low prices: viz.—Views in France, 4s. ditto in Rome,
 4s. 6d. ditto on the Rhine, 5s. 6d. CALOTYPE VIEWS, in
 France, 1s. 3d. ditto in England, 1s. 6d. adjusting French polished
 MAHOGANY STEREOSCOPE, well finished, at 10s. 6d., at C.
 BAKER'S, Optical Instrument Warehouse, 243 and 244, High
 Holborn.

PHOTOGRAPHIC CAMERAS.

OTTEWILL & MORGAN'S MANU-
FACTORY, 24 and 25, Charlotte-terrace, Caledonian-road,
 Islington.—OTTEWILL'S REGISTERED DOUBLE-BODY
 FOLDING CAMERA, adapted for Landscapes or Portraits, may
 be had of A. Ross, Featherstone-buildings, High Holborn. Photographic
 Institution, Bond-street, and at the Manufactory above, where
 every description of Cameras, Slides, and Tripods may be had.—
 The Trade supplied.

ROSS'S PHOTOGRAPHIC PORTRAIT AND
LANDSCAPE LENSES.—These Lenses give correct defini-
 tion at the centre and margin of the picture, and have their
 visual and chemical action foci coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest
 intensity yet produced, by procuring the coincidence of the chemi-
 cal, actinic and visual rays. The spherical aberration is also very
 carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It
 is furnished with a double achromatic object-lens, about 3 inches
 in aperture. There is no stop, the field is flat, and the image very
 perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

COLLODION PORTRAITS AND VIEWS,

obtained with the greatest ease and certainty, by using
 BLAND & LONG'S preparation of SOLUBLE COTTON. Certai-
 nity of uniformity of action over a lengthened period, combined
 with the most faithful rendering of the half-tones, constitute this
 a most valuable agent in the hands of the Photographer.

Albumenized Paper, for printing from glass and paper negatives,
 5s. per quire.

The PNEUMATIC PLATE-HOLDER for Collodion Plates

Waxed and iodized Papers of tried quality.

Inspection in the processes.

BLAND & LONG, Opticians and Photographic Instrument
 Makers, and Operative Chemists, 153, Fleet-street, London.

*** Catalogues sent upon application.

THE IODIZED COLLODION, manufactured

by J. B. HOCKIN & CO. 289, STRAND, LONDON, still
 remains unrivalled for sensitiveness and density of Negative—it
 excels all others in its keeping qualities and uniformity of constitu-
 tion.—Albumenized Paper, 7½ by 11, 5s. per quire; Waxed ditto,
 7s., of very superior quality.—Double Achromatic Lenses, equal in
 all points to those of any other manufacturer: Quarter Plate,
 2l. 2s.; Half Plate, 5l.; Whole, 10l.—Apparatus and pure Chemi-
 cals of all descriptions.

Just published.—**PRACTICAL HINTS ON PHOTOGRAPHY,**
 by J. B. HOCKIN. 3rd edition, price 1s.; per post, 1s. 4d.

XYLO-IODIDE OF SILVER, exclusively used

at all the Photographic Establishments.—The superiority
 of this preparation is now universally acknowledged. Testimo-
 nials from the best Photographers and principal scientific men of
 the day, warrant the assertion, that hitherto no preparation has
 been discovered which produces uniformly such perfect pictures,
 combined with the greatest rapidity of action. In all cases where
 a quantity is required, the resolutions may be had at Wholesale
 price in separate Bottles, in which state it may be kept for years,
 and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my
 name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to
 counterfeits which is felony.

CYANOGEN SOAP, for REMOVING all kinds

of PHOTOGRAPHIC STAINS. The genuine is made only by
 the inventor, and is secured with a red label bearing this signature
 and address: RICHARD W. THOMAS, CHEMIST, 10, PALL
 MALL, Manufacturer of pure Photographic Chemicals; and may
 be procured of all respectable Chemists, in Pots, at 1s., 2s., and
 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-
 yard; and Messrs. Barclay & Co. 95, Farringdon-street, Wholesale
 Agents.

LONDON LIFE ASSOCIATION,

Instituted 1806.
 OFFICE, 81, KING WILLIAM-STREET.

President—Charles Franks, Esq.

Vice-President—John Benjamin Heath, Esq.

THIS Society is essentially one of Mutual As-
surance, in which the Premiums of its Members are reduced
 after seven years.

The rate of reduction of the Premiums for the last year
 was 7½ per cent., leaving less than one-third of the original
 Premium to be paid.

The Society also undertakes other descriptions of Assurance, in
 which the Assured do not become Members, and having ceased to
 allow any commission to Agents, the Society has been enabled to
 reduce the Premiums for this class of Assurances to the following
 very low rates:—

Annual Premiums for the Assurance of £100.

Age.	£.	s.	d.	Age.	£.	s.	d.	Age.	£.	s.	d.
20	1	13	7	35	2	7	6	50	4	1	2
25	1	17	0	40	2	15	5	55	5	1	0
30	2	1	5	45	3	6	0	60	6	10	0

The Court of Directors are authorized by the Deed of Settlement
 to advance money on the security of Policies in this Association.

EDWARD DOCKER, Sec.

SOVEREIGN LIFE ASSURANCE

COMPANY.

40, ST. JAMES'S-STREET, LONDON.

Trustees.

The Right Hon. the Earl of Sir Claude Scott, Bart.
 Talbot, K.G. &c. &c. B. Bond Cabell, Esq. M.P.
 The Rt. Hon. Lord de Mauley. Henry Fownall, Esq.

Directors.

Chairman—Lieut.-Col. Lord ARTHUR LENNOX.
 Deputy-Chairman—Sir JAMES CARMICHAEL, Bart.

John Ashburner, Esq. M.D. John Gardiner, Esq.
 T. M. B. Batard, Esq. Charles Farebrother, Esq. Ald.
 J. P. Bathurst, Esq. Charles Osborn, Esq.

The following extract from the Report just issued will illustrate the
 progress and condition of the Society:—

"The year which closed on the 31st of October last has proved,
 notwithstanding the obvious disadvantages with which it has
 been attended, one of the most successful in the experience of the
 Office."

"The Directors have, during that period, received 421 proposals
 for the assurance of 225,600*l.*, the net amount of income which
 would have exceeded 7,500*l.* Of these proposals, 225 have been
 completed, assuring 124,790*l.*, and 4,374*l.* 5*l.* 10*d.* have been received
 for new Premiums."

"These Premiums, when compared with the business of the pre-
 ceding year, display an increase of nearly 50 per cent."

"While the income of the Company has thus received so large
 an accession, the office has only been called on, during the same
 period, to pay 1,653*l.* 18*l.* 10*d.* for claims, a sum which bears a re-
 markably small proportion to the mortality which might justly
 have been anticipated. This feature in the career of the Company
 has thus been attended to the ninth year; and the Directors
 trust that such a fact evidences the care with which the business
 of the Office has been invariably conducted."

The Office presents—

The security of a large paid-up Capital.

Very moderate rates for all ages, especially young lives.

No charges whatever except the Premium.

Policies indisputable.

Prospectuses, copies of Reports, Forms, and every information,

can be obtained at the Office, 40, St. James's-street, London.

HENRY D. DAVENPORT, Secretary.

BANK OF DEPOSIT,

NATIONAL ASSURANCE AND INVESTMENT ASSOCIATION,

No. 3, PALL MALL EAST, LONDON.

Established A.D. 1844.

Empowered by Special Act of Parliament.

Parties desirous of INVESTING MONEY are requested to exa-
 mine the plan of this Institution, by which a high rate of interest
 may be obtained with perfect security.

The Interest is payable in January and July at the Head Office
 in London; and may also be received at the various Branches, or
 through country bankers, without delay or expense.

AND 2, ROYAL EXCHANGE-BUILDINGS, LONDON.

Established 1806.

It is respectfully notified that parties holding Policies in this
 Office the Renewals of which fall due at Christmas, that the same
 should be paid on or before the 9th of January. The Receipts
 are lying at the Offices in London, and in the hands of the
 several Agents.

CHARLES STEVENS, Secretary.

SUN LIFE ASSURANCE SOCIETY,

LONDON.

SHARE OF PROFIT INCREASED FROM
ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in
 FOUR-FIFTHS of the Net Profits of the Society, according to
 the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young
 lives are lower than in many other old-established offices, and
 Insurers are fully protected from all risk by an ample guaran-
 tee fund in addition to the accumulated funds derived from the
 investments of Premiums.

Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threadneedle-
 street, London, or of any of the Agents of the Society.

INSTITUTED 1831.

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.
Head Office—EDINBURGH, 26, St. Andrew-square.
Manager—ROBERT CHRISTIE, Esq.
LONDON—126, Bishopsgate-street, Cornhill.

The **SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY** is an Institution peculiarly adapted to afford provision for Families. It was established in the year 1831, upon the principle of **MUTUAL CONTRIBUTION**, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its Members. The following Examples exhibit the Additions already made:—

A Policy for 1,000*l.*, opened in 1838, is now increased to 1,531*l.* 8*s.*
A Policy for 1,000*l.*, opened in 1836, is now increased to 1,421*l.* 10*s.*
A Policy for 1,000*l.*, opened in 1840, is now increased to 1,310*l.* 12*s.* 7*d.*

The Profits are ascertained and divided triennially among Policies of more than five years' duration.

The Annual Revenue is upwards of 1,000,000*l.*

The Amount of Assurances in force is upwards of Four Millions and a Quarter sterling.

The Amount paid to the Representatives of Deceased Members exceeds 600,000*l.* sterling.

The Total Amount of Vested Additions allocated to Policies exceeds 600,000*l.*

The Accumulated Fund is upwards of 830,000*l.*

Loans granted to Members to the extent of the office value of their Policies.

Copies of the Annual Report, Forms of Proposal and all information, may be had on application at any of the Society's Offices in Town or Country.

The utmost security is afforded by the largely Subscribed Capital of the Company, held by a highly responsible Proprietor; and the Income of the Society, which now, from PREMIUMS alone, is about 500,000*l.* per annum.

The PREMIUM is in each case fixed in strict accordance with the merit of the risk under consideration, and without regard to the Tariffs usually governing the rates of other Companies.

Prospectuses and every other Information may be obtained at the Chief Office, as above, or from any of the Agents.

W. H. PRESTON, Secretary.

LAW LIFE ASSURANCE OFFICE, Fleet-street, London. Dec. 28, 1894.

NOTICE IS HEREBY GIVEN, that a GENERAL MEETING of Proprietors of the Law Life Assurance Society will be held at the Society's Office, Fleet-street, London, on FRIDAY, the 2nd day of February next, at twelve o'clock at noon precisely, pursuant to the provisions of the Society's deed of settlement, for the purpose of receiving the Auditors' Annual Report of the Accounts of the Society up to the 31st of December, 1894; to elect two Directors, in the room of Thomas Clarke, Esq., deceased, and Edward Lawford, Esq., who has disqualifed; and for general business.

The Director to be chosen in the room of Thomas Clarke, Esq., will remain in office until the 24th of June, 1895. The Director to be chosen in the room of Edward Lawford, Esq., will remain in office until the 24th of June, 1896.

By order of the Directors,
WILLIAM SAMUEL DOWNES, Actuary.

MITRE GENERAL LIFE ASSURANCE AND ANNUITY ASSOCIATION.

No. 23, Pall Mall, London. Established 1845.
(With which is united the Business of the Agis Assurance Office, of late of 11, Moor-street.)

Protective Capital, 150,000*l.*
This Society offers the option of Mutual Assurance, with Share of Profits; or of very moderate rates under the guarantee of a large Protective Capital.

The Profits are either added to the Policy, or paid in cash, or go to reduce the Annual Premium, which is for 10 years or for a longer term, as may be desired. The rates are for pure Mutual Offices, are equivalent to an immediate Bonus of from 30 to 50 per cent. of the Amount Assured. Ex.—Premium for assuring 1,000*l.* at age 31, 2*l.* 10*s.* 2*d.* Average Premium of Mutual Offices, 27*l.* 8*s.* Annual saving, 6*l.* 5*s.* 10*d.* equivalent to a Bonus of 31*l.* 5*s.* 7*d.*; or to a Policy of 1,312*l.* 5*s.* 7*d.*

Special Feature.—The Annuities granted by the Mitre increase periodically on the Mutual System. All expenses of the Annuity Debt are defrayed by the Association.

More detailed information will be readily furnished on application, by letter or otherwise, to the Secretary, at the Mitre Life Office, No. 23, Pall Mall, London.

Active Agents required in such districts as are not already represented. Remuneration liberal.

January, 1895. WILLIAM BRIDGES, Secretary.

TO THE CLERGY, ARCHITECTS, AND CHURCHWARDENS.

GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., replies immediately to all inquiries addressed to him at the above address, from which all orders are executed. He respectfully invites direct communications, as far by the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

F. BILL'S GENUINE INDIA CURRIE

POWDER, prepared from an original receipt, at his warehouse, 27, South Audley-street. This currie powder will be found to surpass all others introduced in this country; are total will prove successful. Sold by Mr. Armstrong, 42, Old Bond-street; Messrs Whittingham, 29, F. Barlow, 3, Curzon-street; Mayfair; Mr. Brookfield, 61, Sloane-street; Mr. Pratt, 5, Southampton-court, Russell-square; and Messrs. Simpkins, 4, Alfred-terrace, Queen's-square, Bayswater.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective means of curing the treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the loins, while the compressing elastic power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss substituted for a brace, for use by day and by night, on the circumference of the body, round below the hips, being sent to the Manufacturer, Mr. WHITE, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c.

OF VARIOUS COLORS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAIN, &c. They are patronized, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price, from 5*s.* 6*d.* to 10*s.* each, postpaid. MANUFACTURER, 228, PICCADILLY, LONDON.

FLOWER-POTS AND GARDEN SEATS.—JOHN MORTLOCK, 250, Oxford-street, respectfully announces that he has a very large assortment of the above articles in various colours, and solicits an early inspection. Every description of useful CHINA, GLASS, and EARTHENWARE, at the lowest possible price, for Cash.—250, Oxford-street, near Hyde Park.

GLASS SHADES, for the Preservation of all Articles injured by Exposure.—At H. HETLEY'S Wholesale and Retail Warehouse, 13, Wigmore-street, Cavendish-square.—Estimates and Prices of all descriptions of Glass for glazing forwarded free.

CHRISTMAS PRESENTS.—

The most appropriate offerings for this Season of Festivity are those which tend to the promotion of Health and Personal Attraction: none can be more acceptable than

ROWLANDS' MACASSAR OIL,

For imparting a transcendent lustre to the Hair, and sustaining it in decorative charm

ROWLANDS' KALYDOR

Imparts a radiant bloom to the Cheek, and a delicacy and softness to the Hands, Arms, and Neck.

ROWLANDS' ODONTO,

Bestows on the Teeth a Pearl-like whiteness, and renders the Breath sweet and pure.

Sold by A. ROWLAND & SONS, 20, Hatton-garden, London, and by Chemists and Perfumers.

BEWARE OF SPURIOUS IMITATIONS!!

INFANT DENTITION.

MRS. JOHNSON'S AMERICAN SOOTHING SYRUP.—This efficacious Remedy has been in general use for upwards of Thirty Years, and has preserved numerous Children when suffering from Convulsions arising from painful dentition. As soon as the Syrup is rubbed on the Gums, the Child will be relieved, the Gums cooled, and the inflammation reduced. It is as innocent as efficacious, tending to produce the Teeth with ease; and so pleasant, that no Child will refuse to let its Gums be rubbed with it. Parents should be very particular to ask for **MRS. JOHNSON'S AMERICAN SOOTHING SYRUP**, and to notice that the Names of BARCLAY & SONS, 95, Farringdon-street, London (to whom Mrs. Johnson has sold the recipe), are on the Stamp affixed to each Bottle.—Price 3*s.* 9*d.* per Bottle.

DO YOU WANT BEAUTIFUL HAIR,

WHISKERS, &c.? If so, use PALMADILLA, declared by thousands of testimonials to be magical in its effects. In all cases of baldness it is a certain remedy, causing a thick and luxuriant growth, strengthening weak hair, preventing its falling off, and checking greyness in all its stages. For the production of Whiskers and Moustaches in two or three weeks, it has never been known to fail. Price 2*s.* sent post free (anywhere) on receipt of 24 penny postage stamps by Miss ALICE MELVILLE, 25, Argyle-square, London.—"I was quite bald, but have now a good head of hair." Wm. Hopton.—"My whiskers are growing very thick." R. Mede, Esq.—"It restored my hair, which I had lost in patches." W. Sturt.—"It has quite checked the greyness." Miss Ellis.—"My moustache is greatly improved." Capt. Ross.

DECAYED TEETH AND TOOTH-ACHE.—

Patronized by Her Majesty the Queen, and H.R.H. Prince Albert.—Mr. HOWARD'S PATENT WHITE SODICANUM is placed in the tooth in a soft state, without any pressure or pain, and in a short time becomes as hard as the enamel, lasting many years. Sold by Savory, 220, Regent-street; Sanger, 150, and Hanway, 63, Oxford-street; Butler, 4, Chapsade; Johnston, 68, Cornhill; and all Chemists and Medicine Vendors in the kingdom. Price 3*s.* 6*d.*, with full directions for use inclosed.

DEAFNESS AND NOISES IN THE HEAD.—

Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. Instant and permanent relief of deafness, by means of the use of ear-drumpets, instruments, or causing one moment's inconvenience to the most aged or nervous sufferer. Dr. HOGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and miraculously removes deafness in the ears. Hospital and private testimonials and certificates from the most eminent Physicians and Surgeons in England, in whose presence deaf persons have been cured, and many hundreds of private patients cured can be seen or referred to. Hours of consultation, 11 to 4 o'clock daily. Examined by Houghton, Member of the London Royal College of Surgeons, May 2, 1845; Lieutenant of the Apothecaries Company, April 30, 1846.

Just published,

'SELF-CURE OF DEAFNESS,' for country patients: a stop to empiricism, quackery, and exorbitant fees, sent on receipt of seven stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

F. DENT, 61, STRAND, and 34 and 35, F. ROYAL EXCHANGE, Chronometer, Watch, and Clock Maker, by appointment, to the Queen and Prince Albert, sole Successor to the late E. J. Dent in all his patents, rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical, Turret, and other Clocks, Dipleidoscopes, and Patent Ships' Compasses, used on board Her Majesty's Yacht, Ladies' Gold Watches, 8 guineas; Gentlemen's, 10 guineas. Strong Silver Lever Watches, 4s. 6s.

MESSRS. J. & R. MCCRACKEN, FOREIGN AGENTS, and AGENTS to the ROYAL ACADEMY, No. 7, Old Jewry, beg to remind the Nobility, Gentry, and Artists, that they continue to receive Consignments of Objects of Fine Arts, Baggage, &c. from all parts of the Continent, for clearing through the Custom-House, &c.; and that they undertake the shipment of effects to all parts of the world. Lists of their Correspondents abroad, and every information, may be had on application at their Office, as above. Also, in Paris, of M. M. CHENY, No. 28, Rue Croix des Petits Champs (established upwards of fifty years), Packer and Custom-House Agent to the French Court and to the Musée Royal.

On application a Price Current of every description of Wines, Spirits, &c. forwarded. Very Choice Cognac Brandy, 66s.; and Old Schiedam Holland, 54s. per dozen.

MODERATOR LAMPS.—IMPROVED PRINCIPLE.—For simplicity, strength and general finish, the LAMPS sold by THOMAS PEARCE & SON are far superior to any other kind. They are all made expressly for their house, and tried before they leave the Manufactory, and have important improvements peculiar to only these Lamps. The patterns are singularly uncommon and beautiful, and for art, elegance and good taste, the assortment is quite unexceptionable, many of the designs belonging exclusively to T. PEARCE & SON.

Direct Importers of Oil of the finest quality.
T. PEARCE & SON, 23, Ludgate-hill.

CAMP LANTERNS for the CRIMEA, combining every recent improvement, adapted for burning the Patent Fusee Candles, which can be instantly ignited as a lucifer. These Lanterns are equally suitable for workhouse and others. Price 9s. each; Fusee Candle, 1s. 3d. per box. Sold by all Lamp-Dealers; by S. CLARKE, 55, Albany-street, Regent's Park; and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES, can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1s. 3d. per box, by all Grocers, Candle-Dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and can be as quickly removed and used for a Hand-Lantern in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The appearance and effect are equal to that of a carriage lamp of superior finish, but the price being less than half, these lamps are placed within the reach of every person requiring a light when driving.—Price 12s. 6d. each, at any of the Lamp-Dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by the Patentee, S. CLARKE, 55, Albany-street, Regent's Park, London.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL.

PREPARED FOR MEDICINAL USE IN THE LOFODEN ISLES, NORWAY, AND PUT TO THE TEST OF CHEMICAL ANALYSIS. PRESCRIBED BY EMINENT MEDICAL MEN AS THE MOST EFFECTUAL REMEDY FOR CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, SOME DISEASES OF THE SKIN, RICKETS, INFANTINE WASTING, GENERAL DEBILITY, AND ALL SCROFULOUS AFFECTIONS—effecting a cure or alleviating suffering much more rapidly than any other kind.

PURE AND UNADULTERATED.

TESTIMONIAL FROM

ARTHUR H. HASSALL, M.D. F.L.S.

Member of the Royal College of Physicians,
Physician to the Royal Free Hospital,

Author of 'Food and its Adulterations,' &c. &c.

"Dear Sir,—I beg to return my acknowledgments for the copy of your Work on Cod Liver Oil, with which you have favoured me. I was already acquainted with it, and had perused it some time previously with considerable gratification, especially the chapter devoted to the consideration of the adulteration of Cod Liver Oil."

"I have paid, as you are aware, much attention to the subject of the adulteration of drugs. Amongst the articles examined, I have not overlooked one so important as Cod Liver Oil, and this more particularly, since it is a very favourite remedy with me, and is, moreover, so liable to deterioration by admixture with other especially inferior Fish Oils. I may state that I have more than once, at different times, subjected your Light Brown Oil to chemical analysis, and this unknown to yourself, and I have always found it to be free from all impurity, and rich in the constituents of bile."

"So great is my confidence in the article, that I usually prescribe it in preference to any other, in order to make sure of obtaining the remedy in its purest and best condition."

"I remain, yours faithfully,"

(Signed) "ARTHUR H. HASSALL, M.D."

"Bennett-street, St. James's-street,"

"1st December, 1854."

"To Dr. De Jongh, the Hague."

SOLD IN LONDON by ANSAR, HARFORD, & CO. 77, STRAND. Dr. De Jongh's sole accredited Consignees and Agents for the United Kingdom and the British Possessions, and sent by them, CARRIAGE FREE, to all parts of town.

May be obtained in the COUNTRY, from respectable Chemists and Vendors of Medicine. Should any persons be experienced in procuring the Oil, Messrs. ANSAR, HARFORD, & CO. will forward four half-pint bottles to any part of England, CARRIAGE PAID, on receipt of a remittance of 10s.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 8s.—IMPERIAL MEASURE.

CAUTION.—The bottles are labelled with DR. DE JONGH'S stamp and signature, without which none are genuine. The Public are specially cautioned against frequent attempts to induce them to purchase other kinds of Cod Liver Oil, under the pretence that they are the same as Dr. De Jongh's, or equally efficacious.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved boilers, requiring no fuel; Warm Air Apparatus, &c.—S. S. TAYLER, Engineer, Battersea.

LEA & PERRINS' WORCESTERSHIRE SAUCE imparts the most exquisite relish to Steaks, Chops, and all Roast Meat, Gravies, Fish, Game, Soup, Curries, and Salad, and is an invigorating tonic and inveterate enemas the stomach to perfectly digest the food. The daily use of this aromatic and delicious Sauce is the best safeguard to health. Sold by the Proprietors, LEA & PERRINS, 6, Vere-street, Oxford-street, London, and 68, Broad-street, Worcester; and also by Messrs. Barclay & Sons, Messrs. Cross & Blackwell, and other Oilmen and Merchants, London; and generally by the principal Dealers in Sauce. N.B. To guard against imitations, see that the names of "Lea & Perrins" are upon the label and patent cap of the bottle.

HENRY'S CALCINED MAGNESIA continues to be prepared, with the most scrupulous care and attention, by Messrs. THOS. & WM. HENRY, Manufacturing Chemists, Manchester. It is sold, in bottles price 2s. 6d.; or with glass stoppers at 4s. 6d. Stamp included, with full directions for its use, by their various agents in the Metropolis, and throughout the United Kingdom; but it cannot be genuine unless their names are engraved on the Government Stamp, which is fixed over the cork or stopper of each bottle.

Sold in London wholesale, by Messrs. Barclay & Sons, Farringdon-street; Sutton & Co. Bow Churchyard; Newbery & Sons, E. Edwards, Thos. Butler, St. Paul's Churchyard; Savory & Co. New Bond-street; Sanger, Oxford-street; and of most of the Vendors of the Magnesia may be had, authenticated by a similar Stamp, HENRY'S ARRESTING START OF VINEY, the invention of Mr. HENRY, and the only genuine preparation of that article.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.

52, FLEET-STREET.—At home from Ten till Five.

ARTIFICIAL TEETH of the best, cheapest, and most durable description. Manufactured and adapted solely by Mr. THOS. LUKY, with guaranteed success, on his improved French mode of mounting, and by the aid of all the graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, BINGLEY & Co. Sole Establishment, 130, Oxford-street, and 10, Collyer-street, Holborn.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DU BARRY'S HEALTH RESTORING REVALENTA ARABICA FOOD counteracts Dyspepsia (Indigestion), Constipation and their consequences—Acid, Ure, M.D. F.R.S., London. These consequences are Nervous, Bilious and Liver Complaints, Acidity, Heartburn, Flatulency, Sick Headaches and General Debility, Low Spirits, Cough, Asthma, Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges, or causes acid on the weakest stomach, nor interferes with a good liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. Highly approved of by Mrs. Ure, Shorland, Harvey, Campbell, Gattickier, Wurzer, Lord Stuart de Decies, and 50,000 other respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.

In canisters, 1lb. 2s. 9d.; 2lb. 4s. 6d.; 5lb. 11s.; 12lb. 22s.; super-refined, 1lb. 6s.; 2lb. 11s.; 5lb. 22s.; 10lb. 33s. The 10lb. and 12lb. carriage free on receipt of Post-office order. Barry Du Barry & Co. 77, Regent-street, and 10, Fortman, Mason & Co. Purveyors to Her Majesty's Household; also, at 60, Gracechurch-street; 230 and 451, Strand; 4, Cheapside; 68, Cornhill; 49, Bishopsgate-street; 55, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

NERVES.—DR. GRANDISON'S PILLS for strengthening the Nerves are sold in London by Mr. RICHARDS, 40, New Bridge-street; Mr. SANGER, 150, Oxford-street; and other respectable Chemists.—Boxes can be sent by post. Price 1s. 1d., 2s. 9d., and 4s. 6d. each.

KNOW THYSELF! The secret art of DISCOVERING the TRUE CHARACTER of INDIVIDUALS from the peculiarities of their HANDWRITING, has been first published by Miss GRAHAM with astonishing success. Her startling delineations are both full and detailed, differing from anything hitherto attempted. All persons wishing to "know themselves," or any friend in whom they are interested, must send a specimen of their writing, stating sex and age, in closing, and paying post-stamps to Miss GRAHAM, 10, CHICHESTER-PLACE, KING'S CROSS, LONDON, and they will receive in a few days a minute detail of the mental and moral qualities, talents, tastes, affections, virtues, failings, &c., of the writer, with many other things hitherto unsuspected.

"Miss Graham is a most successful graphologist." Family Herald.

HOLLOWAY'S PILLS an incomparable MEDICINE for the CURE of BILE and INDIGESTION.—Extract of a Letter from Mr. James Henshall, of Ashton-under-Lyme, dated June 28, 1854:—"To Professor Holloway, Sir.—I was for a considerable period afflicted with indigestion, attended with frequent sickness, loss of appetite, giddiness, headache, drowsiness, and diarrhoea, together with generally disorganized constitution, which defied the effects of a variety of reputed medicines, and deriving no benefit from them whatever, I commenced taking your Pills, and am bound in gratitude to confess that they have been the sole means of curing me of my complaint, and restoring me to perfect health."—Sold by all Vendors of Medicine, and at Professor Holloway's Dispensary, 221, Strand, London; and 80, Maiden-lane, New York.

177, PICCADILLY, OPPOSITE BURLINGTON HOUSE.

JAMES TOOVEY begs to inform Buyers of Rare and Fine Books that he has removed to the above more convenient Premises, recently in the occupation of the late Mr. WILLIAM PICKERING, and that he is preparing a Catalogue of his Stock, which for the most part are remarkable for beauty of condition, and are bound by the best Binders of past and present times. The Collection will be found rich in English History and Topography, comprising the most important of the County Historians, in French Belles Lettres, and Mémoires illustrative of French History, Classics, Natural History, &c. The following List is given in illustration of the character of the Stock:—

Just published, price 5l. 5s.

BREVIARIUM ABERDONENSE, 2 vols. 4to. half-morocco, uncut, beautifully printed in red and black, by Whittingham.

The Books of Ritual of the Scottish Church which were saved from destruction in the great Ecclesiastical Revolution of the Sixteenth Century were very few.—This Breviary is that which was used in the extensive Diocese of Aberdeen; and was printed by Chapman, the first printer established in Scotland, in 1509 and 1510, but is now of such rarity, that no more than four copies, (and no one of these altogether perfect) can be traced. The Bishop, by whose labours the work was perfected, was William Elphinstone, one of the most pious and munificent Prelates that ever adorned the Scottish Church.

The Public and the Trade are informed that all the late Mr. PICKERING'S Valuable Publications are on Sale, many at reduced prices.

Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the county of Middlesex, at this printing-office No. 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in the said county; and published by JOHN FRANCIS, of No. 14, Wellington-street North, in the said county, Publisher, at No. 14 in Wellington-street aforesaid; and sold by all Booksellers and News-vendors.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, Mr. John Robertson, Dublin.—Saturday, January 6, 1855.

Dr. BEHR, assisted by Graduates from the Universities of Oxford and Cambridge, and Foreign Masters, all of whom are resident with him, undertakes the EDUCATION of a limited number of PUPILS, the Sons of Noblemen and Gentlemen, with a view to prepare them for the Public Schools, Naval and Military Colleges, or any of the various Professions.

The system of instruction includes—1. The CLASSICS and MATHEMATICS, in which the Pupils will be thoroughly well grounded, according to the most approved methods. 2. The MODERN LANGUAGES—to which especial attention will be paid, and for the acquisition of which more than ordinary advantages are afforded. 3. The USUAL BRANCHES of an ENGLISH EDUCATION—all, or any of which, may be made more or less prominent in the plan of Study, as may be deemed desirable in any particular instance. 4. FORTIFICATION, DRAWING, FENCING, and MILITARY TACTICS—in which the Military Class receives regular instruction.

The Establishment is divided into an Upper and a Lower School. Pupils, in the latter division, are thus kept separate from their seniors, both in the hours of study and recreation.

References may be made to the parents of Pupils and others, including several Noblemen, Dignitaries of the Church, and individuals of high standing in society.

Terms: If the Pupils are under 12 years of age, 50 Guineas per annum; above that Age, 60 Guineas. No Extras whatever, except Books and Medical attendance.

A Quarter's notice must be given in case of a Pupil being removed from the School.

DR. ALTSCHUL, EXAMINER Royal College of Physicians, Member of the Philological Society, London, gives LESSONS in the GERMAN, ITALIAN, and FRENCH LANGUAGES, and in the History of the French Language, in the same Lesson, or in alternate Lessons, at their own, or at the Doctor's residence, 2, CLANDON-STREET, CAVENDISH-SQUARE.

DR. FISCHER'S CLASSES for the STUDY of the GERMAN LANGUAGE and LITERATURE, as well as for Conversation, meet at his house, 155, Albany-street, Regent's Park, a few doors south of the Colosseum.

A GERMAN GENTLEMAN of CLASSICAL EDUCATION is desirous of giving INSTRUCTION in his NATIVE LANGUAGE.—Address Mr. GOLDMANN, No. 11, Caroline-street, Bedford-square.

TO INEXPERIENCED AUTHORS.—A Literary Gentleman, of great experience and some reputation, is willing to devote a portion of his time to assisting literary aspirants in PREPARING their MANUSCRIPTS for the Press.—Address Omega, Post-office, West Brompton.

TO EDITORS OF MAGAZINES AND SERIALS.—A Literary Writer, highly connected with the Press, OFFERS HIS SERVICES to the Editor of a Magazine or Serial desirous of increasing its circulation, and has publication with the New Year.—Address P. L. S., care of W. H. Sims, Esq. Royal Library, St. James's-street.

TO NEWSPAPER PROPRIETORS.—A REPOINTER, who has had some experience on a Provincial Newspaper, wishes a RE-ENGAGEMENT.—Address, N. A. Messrs. W. Thomas & Co., 19 to 21, Catherine-street, Strand.

TO SCHOOLS.—DRAWING AND PAINTING.—An Artist of long practice in public and private teaching is ready to ENGAGE with any respectable Establishment after the recess.—Address G. P., 54, Newman-street, Oxford-street. The latest Testimonials can be given.

TO SCHOOL ASSISTANTS.—Dr. HOFMANN, of Gonshausen, on the Rhine, is desirous of securing the assistance of a GENTLEMAN to give instruction in the English Language, and occasional Lessons in Geography, History, &c. This affords an excellent opportunity to a Gentleman desirous of acquiring a knowledge of German. For particulars, apply to Mr. H. Medlock, 20, Great Marlborough-street, London.

ORMOND CLUB, Great Ormond-street, Bloomsbury.—Gentlemen desiring the convenience of a CLUB in this locality, at a moderate subscription, may obtain all necessary information, as to the mode of admission, &c., by personal application, or by letter addressed to the Secretary at the Club House.

AN ARCHITECT in extensive practice, especially in Ecclesiastical Architecture, has a VACANCY in his Office for an IN-DOOR or OUT-DOOR PUPIL.—Address, B. B., care of the Housekeeper, Temple Chambers, Fleet-street, London.

THE ART-UNION OF GLASGOW.—Instituted 1841.
Licensed by Act of Her Majesty's Privy Council, 1848.
Secretary's Office, 20, St. Vincent-place.
Patron—His Royal Highness the PRINCE ALBERT.
President—His Grace the DUKE of HAMILTON.
Honorary Secretaries—MR. ROBERT ALEXANDER KIDSTON, MR. ROBERT ALEXANDER KIDSTON, Acting Secretary.
The OBJECT of THE ART-UNION of GLASGOW is, briefly, to aid in extending amongst the community a knowledge of the Fine Arts, by the purchase and dissemination amongst the Members of numerous Works.

A Subscription of ONE GUINEA constitutes Membership for ONE YEAR. The whole Subscription, after deducting the necessary expenses, are devoted to the purchase of Pictures, Drawings, Sculptures, Engravings, and other Works of Art. Each Member for the present year, for every Guinea subscribed, is entitled to the following privileges:—

I.—To a Copy of the very beautiful Line Engraving on Steel, of "COMING OF AGE in the OLDEN TIME," after the Painting by W. P. FRITH, Esq. R.A., Engraved by F. HOLL, Esq., for the Society.—Size of Engraved Surface, 36 inches by 22 inches.
II.—To the chance of obtaining at the Annual General Meeting, in July, 1855, for every Guinea subscribed, a Painting, Statuette, or Group, in Bronze or Parian; a Fac-simile Copy in Chromo-Lithography of a Painting, by J. GILBERT, Esq., of "SPANISH PEASANTS GOING TO MARKET," same size as original; or some other Work of Art, purchased for distribution among the Members of the Society.

The Committee of the Art-Union of Glasgow have great pleasure in drawing attention to the very beautiful and high-class Engraving for this year, the largest and most valuable ever issued by any Art-Union. The Committee, following the rule they have laid down, to keep up the high quality of the Engravings issued by them, have given a very large price for this Engraving, and if published in the usual way, would have been charged Three Guineas; so that Subscribers to the Art-Union of Glasgow, for every Guinea subscribed, will be certain of obtaining an Engraving three times the value of their Subscription, and also have the chance of obtaining, at the Annual Meeting, a Painting or other Work of Art, purchased for distribution among the Members of the Society. Subscriptions will be received at the Office of the Society, 20, St. Vincent-place, or by any of the Members of the Committee of Management; and by the Honorary Secretaries appointed throughout the country.

ROBERT ALEXANDER KIDSTON,
Acting Secretary, A. U. of G.

LANDSCAPE GARDENER and GARDEN ARCHITECT.—Mr. W. DAVIDSON is about concluding his ENGAGEMENT with Sir W. F. Middleton, Bart., of Shrubland Park, in consequence of the completion of the alterations on which he has been there employed; and respectfully tenders his services in the above capacities to Noblemen and Gentlemen, and the public generally, in laying out or improving Gardens, Grounds, Parks, Cemeteries, Arboretums, &c.

Mr. D. feels strongly the importance of the opportunities he has had of maturing his taste for natural arrangement and artistic design, under Sir William and Lady Middleton, and appeals with confidence to Shrubland for examples of his practical and scientific knowledge, as a Civil Engineer, in directing the satisfactory and economical execution of the various works. He begs to mention further that his practical experience enables him to offer advice upon all matters both structural and cultural.

Mr. D. is kindly permitted to refer to Sir W. Middleton, Bart. of Shrubland Park, Ipswich, Sir Charles Barry, Westminster, Dr. Lindley, and many others who are pleased to consider him worthy their patronage and recommendation.

Shrubland Park, Ipswich, January 8th, 1855.

CALNE SCHOOL, WILTS.—The Rev. W. B. JACOB, M.A. of Emmanuel College, Cambridge, receives Pupils to prepare them for the Public Schools at Forty-five Guineas per Annum, Wages included.
The course of instruction embraces Latin, Greek, French, Mathematics, Writing, Arithmetic, &c.
French taught by a resident French Master.
The situation is healthy, and the grounds spacious. Distance, six miles from the Chippenham Station, on the Great Western Railway, to and from which there is a Coach twice a day.

The following Gentlemen have kindly allowed References to be made to them:—

W. WATKINS, Esq. Highways, Calne.
Rev. W. DALRYMPLE, Congleton, Cheshire, near Calne.
Rev. G. W. DAUBENY, Seend, near Devizes.
H. G. ALDREY, Esq. Norton Lodge, near Chippenham.
E. ALSTON, Esq. Woodlands, near Blackheath, Kent, and 2, Road-lane, City.
JAMES T. FORDYCE, Esq. Winchester.
R. C. GALE, Esq. Winchester.
EDWARD LAMMER, Esq. Southampton.

Michaelmas Term commenced 2nd Oct., 1854, and closed Dec. 20th.
Lent Term will commence 18th Jan., 1855, and will close 31st March.

Each Term will commence 19th April, 1855, and close 5th July.
The Fees are a composition of 26s. 5s. for the year, or 9s. 5s. for one Term; or 11s. 6s. per Term, for those Classes which meet twice in the week, and 1s. 1s. for those which meet once. All payments to be made at entrance.

PUPILS UNDER THE AGE OF EIGHTEEN ABOVE EIGHT YEARS OF AGE, UNDER THE IMMEDIATE DIRECTION OF THE PROFESSORS.—This Class has been established to supply the want of good elementary instruction, and as introductory to the College course.

Lady Superintendent, Miss Parry; Assistant, Miss D. A. Beale.
The year of study extends from the last week in September to the last week in July, with vacations at Christmas and Easter.

The Fees are 15s. 15s. for the year for pupils under thirteen years of age, and 21s. for pupils above thirteen.

Certificates of proficiency are granted, in accordance with the provisions of the Charter, to the Ladies in any branch of knowledge, on passing the required examinations. Certificates of general proficiency are given to pupils on leaving the College.

Particulars may be ascertained at the College daily, from Ten till Four; and from the Deputy-Chairman, at the College, every Wednesday and Saturday before 12 o'clock.

Lady Resident, Mrs. ROWSELL.

CITY SCHOOL FOR YOUNG LADIES, 9, South-place, Finsbury-square; instituted with a view to provide a sound and liberal education upon inclusive and moderate terms, more particularly for the sisters of pupils attending the public schools. The ensuing Term will commence on THURSDAY, January 18.—Prospectuses, with full particulars, may be obtained upon application to the Principal at the School.

TO BOOKSELLERS.—A WORKING PARTNER (who can command at least 4000*l.*) WANTED in an old-established and Publishing House in the City of London.—Apply, by letter only in the first instance, to Mr. Turling, 3, Newgate-street, City.

THE CONSERVATIVE LAND SOCIETY.
—THE OLD FORD ESTATE, in the Parish of St. Mary, STRATFORD-LE-AWON, Middlesex, within the Borough of the Tower Hamlets, and within the City of London, is ALLOTTED at the Office, No. 35, North-Row, Strand, London, on WEDNESDAY, the 24th of January. The Old Ford Estate has a frontage on the Old Ford and Bethnal Green Roads, a frontage to a new road on one side, and a footpath called the Old Roman-road on the other. It is divided into lots of various sizes, and is situated near the St. George Duckett's Canal. It is about one quarter of a mile from the Station of the Eastern Counties Railroad, and three quarters of a mile from Bow Church. Building operations have been going on for some time in the vicinity of the Estate, and as fast as the houses are built they are inhabited. The Chelsea and Bethnal Green Omnibuses run twelve times per day as far as the Estate, at 4d. fare to the Bank. The allotment of the land is divided into one plot of 1,000*l.*; four of 150*l.* each; one of 50*l.*; three of 100*l.* each; three of 80*l.* each; fifteen at 75*l.* each; and one hundred of sixty yards of 30*l.* each.

For information as to rights of Choice on the Estate apply to CHARLES LEWIS GRUNEISEN, Secretary.

London: Robert Cocks & Co., New Burlington-street, Music Publishers to the Queen.

SURFACE-PRINTING ADAPTED to the

PRODUCTION of BANK NOTES. — Messrs. BRADBURY & EVANS, Printers, respectfully invite the attention of BANKERS and MERCHANTS to the NEW SYSTEM of Printing the BANK of ENGLAND NOTES and CHEQUES from Electrotypes by the Ordinary Printing Machine — a system whereby increased uniformity and excellence are insured at a GREATLY DIMINISHED EXPENSE, as compared with the more tedious and expensive operation of COPPER-PLATE PRINTING.

Messrs. Bradbury & Evans beg therefore to announce that, being in possession of the mode of carrying out this VALUABLE INVENTION, they are prepared to undertake the Production and Printing of Bankers' Notes, Cheques, Drafts, Bills of Exchange, Letters of Credit, Share Plates, and all similar Mercantile Documents, after the same manner as practised at the BANK of ENGLAND.

* * * As a further evidence of the advantages of the system, the Government have lately adopted "Surface-Printing from Electro-types," for the Production of the RECEIPT STAMPS, &c. London, Whitefriars, Fleet-street.

COLNAGHI'S PATRIOTIC FUND

ALMANAC.

Drawn by the LADY AUGUSTA CADOGAN, and Fac-similed in Chromo-Lithography by Messrs. DAY & SON.

USEFUL PRESENT FOR A YOUNG
ENTOMOLOGIST.

Just published, with a Coloured Plate, price
Half-a-Crown,

THE ENTOMOLOGIST'S
ANNUAL
FOR 1855;

COMPRISING

Notices of the New British Insects
detected in 1854.

LEPIDOPTERA. By THE EDITOR.

HYMENOPTERA. By FREDERICK SMITH.

COLEOPTERA. By E. W. JANSON.

Edited by H. T. STAINTON.

Opinions of Entomologists.

"The Entomologist's Annual" cannot fail being very useful, both as an annual *résumé* of new discoveries, and as making Entomologists acquainted with each other. I wish it every success, and have ordered four copies to give to young Entomological friends."—WILLIAM SPENCE, 18, Lower Seymour-street.

"I think the 'Little Stranger' is the very thing we want, and you may depend upon me making some novelty known."—T. J. BOLD, Newcastle-upon-Tyne.

"I have just received 'The Entomologist's Annual.' I am greatly pleased with it, especially that portion of it which contains a list of the new insects discovered since 1835."—REV. JOSEPH GREENE, Dublin.

"The Annual is very much wanted, and should have the certain effect of stimulating to further observation and research. I hope it will meet such a body of readers as will induce its being continued."—HUGH COLQUHOUN, M.D. Glasgow.

"It is certainly a good design, and will tend to keep many a country collector up to the mark who might otherwise have fallen in the rear; for it has hitherto frequently been a matter of no small difficulty to get information about novelties."—J. W. DUNNING, Cambridge.

"I will do all I can to promote the sale of the Annual, because I think it deserves support."—G. R. WATERHOUSE, British Museum.

"I think it an exceedingly successful and useful publication."—T. V. WOLLASTON, Brompton.

"I have but little fear, after it is once known, of its having a large sale."—JOHN SCOTT, Stockton.

"I am much pleased with the work: it is a book that was sadly wanted."—R. H. STRETCH, Banbury.

"The Annual is excellent, and will, I expect, set many a net which has long laid dormant a-going again."—GEORGE WAILES, Newcastle-upon-Tyne.

"If the thousand collectors that I estimate there really exist in England are to be reached, it must be through such half-crown publications as yours."—EDWIN LEES, Worcester.

London: JOHN VAN VOORST, 1, Paternoster-row.

ANNOUNCEMENTS.

I.
DOUBLE VOLUMES.

On Wednesday, January 17, will be ready, Vols. I. to IV. bound, Two Vols. in One, strongly and handsomely, red cloth lettered, with Indexes, price 3s. 6d. each Double Volume.

III.

A NEW DESCRIPTIVE CATALOGUE OF WORKS OF EDUCATION, AND WORKS IN SCIENCE AND GENERAL LITERATURE, published by WALTON & MABERLY, will be ready this Month (January), and will be forwarded (free) to any one writing for it.

Instead of laudatory extracts from reviews, general notices are given of the chief subjects and most prominent peculiarities of the books. The publication is designed to put the reader, as far as possible, in the same position as if he had inspected for himself, at least cursorily, the works described.

IV.

DR. SMITH'S TACITUS.

A NEW and GREATLY IMPROVED EDITION will be ready this Month of

TACITUS. GERMANIA, AGRICOLA, and FIRST BOOK of the ANNALS. With English Notes, original and selected, and BURTON'S Remarks on the Style of TACITUS. Third Edition. Edited by Dr. WILLIAM SMITH, Classical Examiner at the University of London. 12mo. 5s. cloth.

V.

THE CHINESE REBEL CHIEF,
HUNG-SIU-TSUEN,

And the ORIGIN of the INSURRECTION in CHINA. By the Rev. T. HAMBERG. Edited, with an Introduction, by GEORGE PEARSE, Foreign Secretary of the Chinese Evangelisation Society. Fcap. 8vo. 1s. 6d. cloth.

The Friend of China contains a review of this narrative, attributed to the Bishop of Victoria, Hong Kong, in which he says:—"The author's well-known caution, truthfulness, and candour, give to the little volume under review an interest and a reality which we miss while perusing the flighty, groundless theories and statements hazarded in such works as those by MM. Yvan and Gallery.... The author had with him in his own house a prominent agent in the events narrated, and kinsman of the Insurgent Chief."

London: WALTON & MABERLY,
28, Upper Gower-street, and 27, Ivy-lane, Paternoster-row.

THE NEW NOVEL,

THE LAST EARL OF
DESMOND:

A Historical Romance of 1599-1603.

2 vols. post 8vo. 18s.

From the ATHENÆUM.

"This 'Last Earl of Desmond' is extremely interesting, and written in a genial and spirited style;—it is easy to read,—there are no heavy or stiff descriptions of scenery or costume,—the characters deliver themselves like men of this world, and do not talk in imitation of the Elizabethan drama. A dash of Irish drollery runs throughout, and the human interest is kept in the ascendant. The conclusion of the story, giving the Earl's imprisonment in the Tower and his intercourse with Sir Walter Raleigh, is well drawn, and it has a touching and quiet interest which makes it the best portion of the book."

From the LITERARY GAZETTE.

"The materials of the book are excellent and unusual. We have been much pleased both with the historical and literary episodes which form a prominent feature in this tale,—a tale likely to be generally popular."

From the STANDARD.

"This delightful romance transports us into a land almost unknown. The style of the tale is so terse as scarcely to admit of condensation. We are sensible what imperfect justice we do to this admirable romance, but its very excellence, consisting in the rapid succession of scenes and incidents which it presents, is the cause of our failing."

From the JOHN BULL.

"An affecting tale of love and jealousy is interwoven with the grievances of Ireland under the reign of Queen Elizabeth in this ably written historical romance. The social and political condition of the sister island at the period in question is portrayed in colours anything but flattering, while the gravity of the theme is constantly relieved by rich touches of Irish humour."

From the SUN.

"This is a historical novel, and relates the fortunes of the 'Last Earl of Desmond.' It is said to be the first work of the author. It displays none of the exaggerations which mark the style of young writers. The work certainly possesses the attractions of originality and conciseness, variety and interest."

From the CRITIC.

"The author has constructed an ingenious plot, which he has embodied in a narrative of unusual spirit. The patrons of the Circulating Libraries enjoy the pictures that are presented to their mental vision. 'The Last Earl of Desmond' will find many to enjoy its vigorous pictures of Irish life in the seventeenth century."

From the WARDER.

"He has produced a very interesting and richly coloured romance. He has broken new ground, and executed a very trying task with a success creditable alike to his fancy, judgment, and research. He has a very considerable facility in lyric composition; several specimens—religious, comic, and sentimental—we encounter in the course of the story."

Dublin: HODGES & SMITH.

London: SIMPKIN, MARSHALL & Co.

BENTLEY'S MONTHLY VOLUMES.

This day, New and Revised Edition, Vol. I. (complete in Three, in crown post 8vo. beautifully printed and bound with an illustration, 6s.

MEMOIRS OF THE COURT OF ENGLAND UNDER THE STUARTS, Including THE PROTECTORATE. By JOHN HENEAGE JESSE.

Examiner.

"This is the first volume of a new series, in which Mr. Bentley very liberally and wisely undertakes to present a selection of the best and most interesting of those works of which he holds the copyright, in the form that will be most acceptable to the main body of book-buyers. They are all to be works of acknowledged worth, hitherto expensive, and they are to be reproduced at a price quite within ordinary means, in portable and handsome monthly volumes, printed well, upon good paper, bound in a respectable manner, embellished frequently with plates, and in every way fit to take their place upon the well-ordered domestic book-shelf. The series commences with Mr. Jesse's 'Court of England under the Stuarts,' and the first of the three volumes in which it will be contained is now before us, a portable duodecimo of almost five hundred pages, uniformly printed, so that each page contains its fair burden of matter, not indulging too much nor yet in the least wearying the reader's eyes. There is a steel-plate portrait of James I., very characteristic, facing the title-page, and the getting up of the whole volume is quite unexceptionable. The character of the series is indicated by the announcement of the works that will appear during the first twelve months,—such as 'Kaye's History of the War in Afghanistan,' 'Wright's England under the House of Hanover,' illustrated by 300 contemporary caricatures and by the burlesques and satires of the day, 'Horace Walpole's Letters,' (the latter sure to be a most attractive book in this form), and so forth. The series, in short, will be a fair and popular presentment to the public of the most valuable part of Mr. Bentley's copyrights, and is one of those undertakings for which it is to the interest of the public to insure success by the heartiness of its support."

The Morning Chronicle.

"The appearance of the graceful little volume before us marks a new epoch in literary enterprise. It remained for Mr. Bentley to be the first to push the system of cheap literature a step further than it has yet been carried, and to give to the public month after month a series of high class works, many of which will live as long as the language,—at a price which is now freely given for many a bulky periodical. We conclude with tendering our best thanks to the publisher for the enterprising spirit in which he has commenced this series of 'Monthly Volumes,' and we heartily wish him every success."

The Daily News.

"Under the appellation of 'Bentley's Monthly Volumes' the enterprising publisher of New Burlington-street has commenced the issue, in a cheap form, of a collection of standard works. The volumes are handsomely printed, and sold at a price which will bring them within the reach of a large class of readers, who must have formerly depended on the resources of a book-club or a circulating library to make acquaintance with their contents. The undertaking is inaugurated by the first volume of that clever piece of anecdotal history, 'The Court of England under the Stuarts,' by Mr. Jesse. Mr. Jesse has adopted a style in which French writers are adepts, and has succeeded most admirably. He lets the numerous anecdotes, which he selects from all kinds of sources, tell the story. Long-winded dissertations are avoided with exemplary care. The biographies meander through a garden of anecdote, most delightfully arranged; and the reader has a more life-like picture of the subject of the narrative than he would have obtained from more pretentious histories. The reader who is not acquainted with Mr. Jesse's work may be told that the author not only furnishes details of the lives of the Sovereigns of the Stuart dynasty, but gives much curious information on the principal characters and events of their reigns. Mr. Bentley could not have commenced his series more happily than with a work which is so rich in material not accessible to the ordinary student. 'The Monthly Volumes' cannot fail of meeting with success."

The Series commences with the First Volume (to be completed in three) of JESSE'S COURT OF ENGLAND UNDER THE STUARTS. After the completion of this work will follow:—KAYE'S HISTORY OF THE WAR IN AFGHANISTAN—WRIGHT'S ENGLAND UNDER THE HOUSE OF HANOVER, with 300 Illustrations—HORACE WALPOLE'S LETTERS—MILNET'S LIFE OF MARY QUEEN OF SCOTS—BECKFORD'S ITALY, &c.

The price of the twelve volumes to be published in the course of 1855, at 6s. per Volume, would be 3l. 12s., but in order to give an advantage to Subscribers, they will be supplied with the first twelve Volumes for 3l. 5s. on remittance of that amount with the order.

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

INTERESTING WORKS NOW READY.

CHEAP EDITION of PEPYS'

DIARY and CORRESPONDENCE, comprising all the recent additional Notes and Emendations, printed uniformly with the last Edition of EVELYN'S DIARY, in 4 vols. post 8vo. with Portraits, &c., price only 6s. each, bound.

CHEAP EDITION of LIVES of

the QUEENS of ENGLAND. By AGNES STRICKLAND. With all the late Improvements, and Portraits of every Queen. 8 vols. 7s. 6d. each, bound.

The CRESCENT and the CROSS.

By ELIOT WARBURTON. CHEAP EDITION. 1 vol. 15 Illustrations, 6s. bound.

The QUEENS before the CON-

QUEST. By MRS. MATTHEW HALL. 2 vols. with Portraits, 21s. bound.

Also, in the press,

BURKE'S PEERAGE and BARONETAGE for 1855. Corrected to the Present Time from the Personal Communications of the No- bility, &c.

Published for HENRY COLBURN, by his Successors,
HURST & BLACKETT, 13, Great Marlborough-street.

THE NEW NOVELS.

OAKLEY MASCOTT. By

L. HOWE. Dedicated to Professor AYTON. 2 vols.

Opinions of the Press.

"A very clever romance. The style throughout is fluent and forcible, and many of the scenes are sketched with considerable graphic power."

"The outline of this very agreeable work is filled up in many parts with the skill of an able artist, and by one who has a refined taste for the lovely and beautiful in creation."

"A deeply touching story, written with exquisite taste and feeling."

"A tale of absorbing excitement."

"This tale is told with much spirit and vivacity."

"This novel is one that will merit, and not lack, good testimonials."

HERBERT LAKE. By the

Author of 'ANNE DYSART.' 3 vols.

"This story is simple, natural, and human, and for that very reason it is passionate, pathetic, and interesting. The sentiment is healthy and natural, the diction easy, fluent, and unaffected. There is the spontaneity of genius about the book, and that is its highest praise and greatest charm."—*Morning Post*.
"The career of Herbert Lake is crowded with interesting incidents, which are narrated by the author in felicitous language, and in a tone and spirit well calculated to rivet and enchain the attention of the reader."—*Morning Chronicle*.

ANTIPODES; or, The New

EXISTENCE. A TALE of REAL LIFE. By A
CLERGYMAN. 3 vols.

THE YOUNG HUSBAND. By

MRS. GREY, Author of 'The Gambler's Wife,' &c. 3 vols.

"The 'Young Husband' is likely to be a great favourite. The story contains abundant sources of interest, and is told with clearness and skill,—often, indeed, with considerable dramatic power."—*Morning Chronicle*.

THE CURATE of OVERTON.

"The startling secession of such men as Newman, Manning and Wilberforce, render the revelations which the author has made in these interesting and instructive volumes extremely well timed."—*Britannia*.

Also, in the press, in 3 vols.

A NEW NOVEL, by Mrs. GORE, entitled 'MAMMON; or, THE HARDSHIPS of an HEIRESS.

THE SECRET HISTORY of a HOUSEHOLD. By the Author of 'ALICE WENTWORTH.' 3 vols.

HURST & BLACKETT, Successors to HENRY COLBURN.

Now ready, at all the Booksellers, in 2 vols.

HOME LIFE IN RUSSIA.

Revised by the Editor of 'Revelations of Siberia.'

From the DAILY NEWS.

"One of the most graphic pictures of Russian life which has ever been presented to the British public. The incidents are so peculiar, and the characteristics so novel in the eyes of ordinary Europeans, that the book can scarcely fail to interest the reader. It throws a strong light upon many features of the social constitution of Russia which have hitherto been enveloped in darkness."

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

NEW WORKS.

The EDINBURGH REVIEW. No.

CCV. JANUARY, 1855. 8vo. price 6s. [On Tuesday next.

Contents.

- I. PARLIAMENTARY OPPOSITION.
- II. CARDINAL MEZZOPANTI.
- III. CHARLES THE FIFTH.
- IV. MODERN FRENCH LITERATURE.
- V. THE SIEGE OF RHODES IN 1480.
- VI. PRIVATE BILL LEGISLATION.
- VII. MOUNT ATHOS AND ITS MONASTERIES—LORD CARLISLE'S DIARY.
- VIII. MARSDEN'S HISTORY OF THE PURITANS.
- IX. THE WAR IN THE CRIMEA.

2.

MEMOIRS and CORRESPONDENCE OF JAMES MONTGOMERY. By JOHN HOLLAND and JAMES EVERETT. Vols. I. and II. post 8vo. with Portraits and Vignettes, price 21s. [On Friday next.

3.

JAMES MONTGOMERY'S POETICAL WORKS. A republication of the First Collected Edition, with Notes, &c. Portrait, and Plates, Monthly, in 4 vols. fcap. 8vo. price 3s. 6d. each. [Vol. I. on the 31st inst.

4.

MOUNTAINS and MOLE-HILLS; or, RECOLLECTIONS of a BURNT JOURNAL. By FRANK MARRYAT. 8vo. Illustrated by the Author. [Just ready.

5.

ST. LOUIS and HENRI IV.: a Second Series of HISTORICAL SKETCHES. By the Rev. J. HAMPDEN GURNEX, M.A. fcap. 8vo. [On Friday next.

6.

BISHOP THIRLWALL'S HISTORY of GREECE. A republication of the Library Edition, with Notes and Maps; monthly, in 8 vols. 8vo. price 7s. 6d. each. [Vol. I. on the 31st inst.

7.

The Traveller's Library.

CORNWALL: Its Mines, Miners, and Scenery. By the Author of 'Our Coal Fields and our Coal Pits.' 16mo. 2s. 6d.; or in Two Parts, 1s. each. [On the 31st inst.

VIII.

The CHINESE EMPIRE. By the Abbé HUC. Copyright Edition, translated with the Author's sanction. 2 vols. 8vo. with coloured Map, price 24s.

IX.

The Rev. A. ARROWSMITH'S GEOGRAPHICAL DICTIONARY of the HOLY SCRIPTURES and the APOCRYPHA. 8vo. price 15s.

X.

HENRY ROGERS'S ESSAYS selected from CONTRIBUTIONS to the EDINBURGH REVIEW. Second Edition, with Additions. 3 vols. fcap. 8vo. price 21s.

XI.

The WARDEN. By ANTHONY TROLLOPE. Post 8vo. price 10s. 6d.

"Keen observation of public affairs, a pungent closeness of style, and great cleverness in the author, are the distinguishing features of *The Warden*."—*Spectator*.

XII.

HINTS on SHOOTING, FISHING, &c. Being the EXPERIENCES of CHRISTOPHER IDLE, Esq. fcap. 8vo. price 5s.

XIII.

BALLADS from HERODOTUS. By the Rev. J. E. BODE, M.A. Second Edition; with 4 additional Pieces. 16mo. price 7s.

XIV.

MOORE'S IRISH MELODIES, in Diamond Type, with the Autobiographical Preface, &c. and a Portrait. 32mo. price 2s. 6d.

XV.

MOORE'S LALLA ROOKH, in Diamond Type, with the Autobiographical Preface, &c. and a Frontispiece. 32mo. price 2s. 6d.

XVI.

Sir BENJ. C. BRODIE'S PSYCHOLOGICAL INQUIRY. Second Edition, revised. fcap. 8vo. price 5s.

XVII.

MISS MAYNE'S LIFE of the CZAR NICHOLAS I. of RUSSIA. Post 8vo. with Map, 10s. 6d.
"The Life of Nicholas the First is a useful biography. It contains an admirable summary of the Eastern Question."—*Daily News*.

A MONTH in the CAMP before SEBASTOPOL. By a NON-COMBATANT. Post 8vo. price 5s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

LONDON, SATURDAY, JANUARY 13, 1855.

REVIEWS

The Origin and Progress of the Mechanical Inventions of James Watt, Illustrated by His Correspondence with His Friends, and the Specifications of his Patents. By James Patrick Muirhead, M.A. 3 vols. Murray.

ARAGO affirms that men will learn to speak of the Age of Papin or of Watt as they now speak of the ages of kings and warriors. The monarch may distinguish his rule by advancing his people in civilization;—the warrior may strike off bonds from the limbs of slaves, or scatter in the fields of conquest the seeds of Literature and Art; but the man who gives to the world a new power, and teaches his brethren how to wield it, has a royalty of his own, and deserves that "Hero Worship" which enthusiasts offer at the shrine of greatness.

Newton by developing the laws of gravitation, Franklin by drawing lightning from the clouds, and James Watt by his discoveries of the relations of heat and steam—stand towards the world in the attitude of creators. They have been the instruments through which Truths have been brought into the world,—and these Truths have exalted man's intelligence and increased his power.

Newton's great truth has had its application in every branch of Mechanical Science. The falling apple took root in the soil. The clock which beats the passing moments,—the machine employed to drive the pile, and the science of projectile forces—now so important to Europe and the world—are some of the fruits gathered from the tree which sprang from that falling apple. Newton gave us, in the truth which he discovered, a balance in which to weigh the planets of our system and the sun around which they revolve. Franklin, with his wonderful kite, realized the poetic fable of Prometheus:—he stole the fire from heaven. But, greater than Prometheus, he subdued the Spirit of the storm, and taught mankind to protect themselves from the torrents of his wrath. The slender thread of Franklin's kite, along which the lightning travelled, was the line from which has been derived the electrical wire, which now conveys men's thoughts and wishes over land and under ocean.

Like these eminent creators, James Watt discovered a great principle. Our knowledge of the mechanical power of heat has enabled us to urge the ponderous train along the iron road,—to traverse the ocean all but regardless of winds or waves,—to penetrate to vast depths in search of the earth's treasures,—and to increase man's powers over Nature a thousandfold.

The volumes before us exhibit not alone the progress of these magnificent discoveries, but also the "inner life" of Watt:—a part of the discoverer worthy of our study. His letters to his friends show us the origin of his investigations, and the awakening and perfecting of his new thoughts.

James Watt the boy writes and tells his father that "the cost of his food was in all but eight shillings a week—and lower than that he could not reduce it without *pinching his belly*." Well may his biographer say, "The bread so bought must have tasted sweet indeed to his lips; but at night he was thankful enough to get to bed 'with his body wearied, and his hand shaking from ten hours' hard work.'"

Watt, as he did not possess the rights of a freeman, was not permitted to commence business for himself in the city of Glasgow. He gained, however, from the University, the privilege of opening his little workshop within its precincts. Here he made every one his friend;

and one of the friends so gained, Prof. Robison, has carefully recorded his experiences of his councillor and companion. He says—

"Our acquaintance at this time became very intimate, and I believe neither of us engaged far in any train of thought without the other sharing in it. I had the advantage of a more regular education: this frequently enabled me to direct or confirm Mr. Watt's speculations, and put into a systematic form the random suggestions of his inquisitive and inventive mind. This kind of friendly commerce knit us more together, and each of us knew the whole extent of the other's reading and knowledge. I was not singular in this attachment. All the young lads of our little place that were any way remarkable for scientific predilection were acquaintances of Mr. Watt; and his parlour was a *rendezvous* for all of this description. Whenever any puzzle came in the way of any of us, we went to Mr. Watt. He needed only to be prompted; everything became to him the beginning of a new and serious study; and we knew that he would not quit it till he had either discovered its insignificance, or had made something of it. No matter in what line—languages, antiquity, natural history—nay, poetry, criticism and works of taste; as to anything in the line of engineering, whether civil or military, he was at home and a ready instructor. Hardly any projects, such as canals, deepening the river, surveys or the like, were undertaken in the neighbourhood without consulting Mr. Watt; and he was even importuned to take the charge of some considerable works of the kind, though they were such as he had not the smallest experience in. When to this superiority of knowledge, which every man confesses in his own line, is added the naïve simplicity and candour of Mr. Watt's character, it is no wonder that the attachment of his acquaintances was strong. I have seen something of the world, and am obliged to say that I never saw such another instance of general and cordial attachment to a person whom all acknowledged to be their superior. But this superiority was concealed under the most amiable candour and liberal allowance of merit to every man."

There are few more interesting biographical notices than those of Watt by Prof. Robison. In another passage he shows us the great practical philosopher developing the mysteries of the Steam Engine, or rather proclaiming to his friend the great discovery.

"At the breaking-up of the College (I think in 1765) I went to the country. About a fortnight after this I came to town, and went to have a chat with Mr. Watt, and to communicate to him some observations I had made on Desaguliers and Belidor's account of the steam-engine. I came into Mr. Watt's parlour without ceremony, and found him sitting before the fire, having lying on his knee a little tin cistern, which he was looking at. I entered into conversation on what we had been speaking of at our last meeting, something about steam. All the while Mr. Watt kept looking at the fire, and laid down the cistern at the foot of his chair. At last he looked at me and said briskly, '*You need not fash yourself any more about that, man; I have now made an engine that shall not waste a particle of steam. It shall all be boiling hot:—aye, and hot water injected, if I please.*'—So saying, Mr. Watt looked with complacency at the little thing at his feet, and, seeing that I observed him, he shoved it away under a table with his feet. I put a question to him about the nature of his contrivance. He answered me rather drily. I did not press him to a further explanation at that time, knowing that I had offended him a few days before by blabbing a pretty contrivance which he had hit on for turning the cocks of an engine."

Mr. Muirhead has with great industry sought for information from every published and every private source,—and many curious facts are thus brought to light. The following is new and curious.—

"Mr. John Hart, an ingenious tradesman of Glasgow, who was a native of Borrowstoness, and, together with his brother, was distinguished by a predilection for the practical arts connected with

science, has related that Mr. Watt frequently conversed with him on subjects of mechanical interest; and that being asked by him in 1817, whether he recollected how the first idea of his great discovery came into his mind, he replied, 'O yes, perfectly. One Sunday afternoon I had gone to take a walk in the Green of Glasgow; and when about half way between the Herd's House and Arm's Well, my thoughts having been naturally turned to the experiments I had been engaged in for saving heat in the cylinders, at that part of the road the idea occurred to me that *as steam was an elastic vapour it would expand, and rush into a previously exhausted space; and that if I were to produce a vacuum in a separate vessel, and open a communication between the steam in the cylinder and the exhausted vessel, such would be the consequence.*'"

—Here we have the perfect development of the Expansive Engine;—for, says Watt himself in his 'Plain Story,'—"the idea once started, the rest immediately occurred."

James Watt possessed mental powers of the most unusual kind. So powerful and certain was the grasp of his mind that we find him undertaking the most varied kinds of work. A Freemasons' lodge in Glasgow required an organ:—Watt was applied to, and although he did not know one musical note from another, he was asked if he could build an organ. He said "Yes,"—and he immediately began by building a small one for Dr. Black. "In doing this," says Prof. Robison, "a thousand things occurred to him which no organ-builder ever dreamed of,—nice indicators of the strength of the blast, regulators of it, &c. &c." He then began to study the philosophical theory of music.

During the period when Watt's grand idea of a steam-engine on his principle of separate condensation was kept in silence and obscurity, and through long years of delay awaiting its uncertain fate, he was working incessantly as a mathematical instrument maker,—and, impelled by the necessities of an increasing family, he commenced practising as a land surveyor and civil engineer. This led Watt to the metropolis,—having, on behalf of the subscribers to the scheme for uniting by a canal the rivers Forth and Clyde, to attend a Committee of the House of Commons. He does not appear to have formed a favourable opinion of our public men, if we may judge from the following extract from a letter to Mrs. Watt, written April 5, 1767.—

"Close confined attending this confounded Committee of Parliament. I think I shall not long to have anything to do with the House of Commons again:—I never saw so many wrong-headed people on all sides gathered together. As Mac says, I believe the *Deevil* has possession of them!"

Eventually, through a mutual friend, Dr. Smale, Watt was introduced to Mr. Boulton, of the Soho Works, Birmingham. This introduction led to a partnership. Mr. Boulton by his active and business habits secured a prolongation of the patent, and Watt's discoveries were now fairly launched. The firm of Boulton & Watt acquired a world-wide celebrity,—their engines were rapidly introduced into the Cornish mines and many of our large manufactories; the period of probation was over, and wealth now began to reward the labours of Watt.

The ten years between 1775 and 1785 were perhaps the most busy in the always active life of Watt. He secured five patents during that period,—introduced innumerable improvements in the steam-engine,—and still found time to attend to philosophical researches. It was during this period that he published his famous discovery of the composition of water. Few questions have given rise to so much angry writing as this. In the *Athenæum* [No. 1004, p. 87] we reviewed Mr. Muirhead's 'Corre-

spondence of the late James Watt on the Discovery of the Composition of Water,'—and in the *Athenæum* [No. 1259, p. 1305] will be found our notice of 'The Life of the Hon. Henry Cavendish,' by George Wilson, M.D. In these papers we carefully examined the evidence, and pronounced an opinion which has since been generally adopted—that the *idea originated with Watt*, and that *Cavendish established the facts*.

After all that has been said on this subject, we think Mr. Muirhead would have displayed better taste and feeling if he had avoided the sarcasms which occur in these pages on the eccentricities of Cavendish. There are other passages which display too much temper to be agreeable, and which we are sorry to see placed in the permanent record of a life so useful and so good as that of Watt. It appears that England was near losing the services of Watt, since in the spring of 1775 the Imperial Government of Russia offered him a salary of 1,000*l.* per annum for his services. The case, however, of Capt. Perry, who, after being engaged by Russia as an engineer, and having served many years in that country, was obliged to take refuge in the house of the British Ambassador, and to return to England without receiving his pay, and some other examples of Russian dishonesty, "recommended to his mind the less dazzling, but more secure, destiny of 'a crust of bread and liberty.'"

The extracts from Watt's private correspondence are valuable—as enabling us to trace the progress of his inventions—and interesting as showing the fine character of his mind. These extracts commence from letters written in 1765, and are continued to 1819.

The following passages are curious as leading us back to the invention of the Locomotive Engine. Dr. Smale of Birmingham writes to Watt on the 18th of April 1769—

"Thou art a philosopher, Watt! I approve the additions in your yesterday's letter. A linen-draper at London, one Moore, has taken out a *patent for moving wheel-carriages by steam*. This comes of thy delays. I dare say he has heard of your inventions. Do come to England with all possible speed. At this moment how I could scold you for negligence. However, if you will come hither soon, I will be very civil and buy a steam-chaise of you, and not of Moore. And yet it vexes me abominably to see a man of your superior genius neglect to avail himself properly of his great talents. These short fevers will do no good."

In reply to this, Watt writes a long letter on the 28th of April, from which we extract a few striking passages.—

"If linen-draper Moore does not use my engine to drive his chaises, he can't drive them by steam. If he does I will stop him. I suppose by the rapidity of his progress and puffing, he is too volatile to be dangerous. Let me know all you know of him. I am resolved unless those things I have brought to some perfection reward me for the time and money I have lost on them, *if I can resist it, to invent no more*. Indeed, I am not near so capable as I was once. I find that I am not the same person I was four years ago, when I invented the fire-engine, and *forewent even before I made a model almost every circumstance that has since occurred*. I was at that time spurred on by the alluring hope of placing myself above want, without being obliged to have much dealings with mankind, to whom I have always been a dupe. The necessary experience in *great* (sic) was wanting; in acquiring it I have met with many disappointments. I must have sunk under the burthen of them if I had not been supported by the friendship of Dr. Roebuck."

* I have now brought the engine near a conclusion, yet, I am not in idea nearer that rest I wish for than I was four years ago. However, I am resolved to do all I can to carry on this business, and if it does not thrive with me, I will lay aside the burthen I cannot carry. Of all things in life, there is

nothing more foolish than inventing. Here I work five or more years contriving an engine, and Mr. Moore hears of it, is more *éveillé*, gets three patents at once, publishes himself in the newspapers, hires 2,000 men, sets them to work for the whole world in St. George's Fields, gets a fortune at once, and prosecutes me for using my own invention! * * You talk to me about coming to England just as if I was an Indian that had nothing to remove but my person. Why do we encumber ourselves with anything else?"

This letter exhibits the heart-burnings of a disappointed man and the stirrings of an enthusiastic spirit. In 1786, we find Watt had "a steam carriage of some size under hand," and he "was resolved to try if God would work a miracle in favour of these carriages." His experiments were interrupted by a journey to Paris, and were never resumed. We find, however, Mr. Edgeworth writing to Watt in 1813:—"I have always thought that *steam would become Universal Lord, and that we should, in time, scorn post-horses. An iron railroad would be a cheaper thing than a road on the common construction*." We see how the whole railway system was predicted here.

We must quote one more extract. It is from a letter written to Mr. R. Muirhead in 1816, declining to serve as Sheriff of Radnorshire:—

"My reasons against serving are, that I have nearly completed my eighty-first year, have precarious health, and am generally confined to the house all the winter and spring;—that I have spent a long life in improving the arts and manufactures of the nation; my inventions at present, or lately, giving employment to the best part of a million of people, and having added many millions to the national riches, and, therefore, I have a natural right to rest in my extreme old age;—that I have no domicile in the county, nor ever had, and have not been in it more than two years, and probably never shall. That, for these reasons, I was excused serving for the county of Stafford, in which I lived twelve years ago; and some of them should weigh more now. Eighty-one is not a period of active life; and, as far as my personal qualities are concerned, I esteem myself perfectly unfit; and the consequences of serving would probably be the sending me a year or two sooner to the grave."

Of this fine old man, Lord Jeffrey says,—speaking of a visit which Watt paid to Scotland, when upwards of eighty,—“His friends in that part of the country never saw him more full of intellectual vigour and colloquial animation, never more delightful or more instructive.” Sir Walter Scott saw Watt at this time, and says of him,—“The alert, kind, benevolent old man; his talent and fancy overflowing on every subject, with his attention alive to every one's question, his information at every one's command.”

Notwithstanding all that has been written of Watt and his discoveries, the public are scarcely yet in a condition to understand the vast range of benefits which he bestowed on the world. In the Soho Manufactory alone 1,605 steam-engines had been made, prior to 1854, giving a total of power equal to 167,319 horses. Under favourable conditions, a Cornish pumping engine has lifted 110,000,000 of pounds one foot high, by the consumption of a bushel of coals. In H.M.S. James Watt the engines are of 700 horse-power,—and the engines now being made for the great iron-ship at Blackwall will have a power of from 2,000 to 3,000 horses. These are but a few examples of the mechanical force which man has gained from Watt. Thousands of engines are now employed, driving carriages and ships, pumping mines and urging machinery; and the enormous power thus employed was entirely wasted before Watt taught us how to turn them to account.

A History of Dancing—[*Histoire, Anecdote et Pittoresque, de la Danse*]. By F. Fertiault. Paris, Aubry.

A complete history of Dancing would include no unimportant section of the social history of the French. M. Fertiault has not filled in this part of the domestic picture of his native country. His book is light—light as the lightest of the "fantastic toes" it pretends to touch upon, with here and there touches of humour. He addresses his book to the Ladies in a rhapsody so verbose that it becomes tedious, and so florid that it becomes ludicrous. We cannot commend M. Fertiault's power as a panegyrist. He does not insinuate a compliment—he throws it at his idol's head. With these general remarks, we may at once turn to the little history, which makes the reader forget the flimsy introduction to which we have referred. We will be content to leave the author's *largesse*, in the shape of very ill-made sugar-plums, to those ladies who may choose to scramble for it.

The history of dancing begins in very early times. Passing by the author's etymological definitions of the word "dance," and the information that Terpsichore is the mythological dancing-mistress of the universe,—we will introduce the author to the reader at the point where he deals with dancing as practised by the ancients.—

I am not going to lead you back to far antiquity in search of the origin of dancing. Dancing is very nearly as old as the world. The Hebrews danced when they emerged from the Red Sea, and about the Golden Calf, which was not their maiden effort. The young maidens of Silo were enjoying the dance in the fields when they were surprised by the youths of the tribe of Benjamin and carried off by force, according to the counsel of the Ancients of Israel.—David danced before the Ark—Socrates learned dancing from Aspasia—the soldiers of Crete and of Sparta went dancing to an assault, &c. But we will leave this point of animated archæology to be resolved by others. I will only inform you, as we pass on, that dancing probably originated in certain gestures which indicate contentment, pain, joy,—just as music was born of certain analogous sounds.

So much for the author's learning. He goes on to assure ladies that Plato, Socrates, Lycurgus, and others held dancing in great veneration. We are further informed that in old Chinese books dancing and music are described as the two most important departments of public affairs. Under the Romans, however, dancing had degenerated; and we are reminded that Cicero addressed a grave reproach to the Consul Gabinus for having sported "a light fantastic toe." Then, did not Sallust reproach Sempronius, a Roman lady, because she danced too well for an honest woman! M. Fertiault, however, reassures French ladies. No Gallic legislator will ever have the temerity to condemn "the most graceful amusement of the *salon*." On the contrary, he believes firmly that could Cicero rise from his very ancient grave, and see the French ladies display their graces in their polkas and schottisches, the ghost would be inclined to withdraw his anathema, and join in the amusement. The reader is next familiarized with the sacred, the funereal, and the profane dances of the Greeks.

Under the head of "profane Greek dances" are described the Laconian, in which the Past, the Present, and the Future were represented by three choirs,—and the Dance of Flowers, in which the performers constantly asked "Where are the roses? where the violets?" &c.,—and the Candiote, described by Homer in the famous description of the shield of Achilles, and is still danced in Greece. In the author's description of the dances of the Romans we find the following exquisite paragraph.—

Numa appeared, and, inspired by his beautiful

'Egeria,' wished to develop the art of dancing. It belonged properly to a woman's mission to perfect this graceful pleasure; but, however, dancing, under this good king, assisted by his goddess, did not reach beyond a sacred or warlike ceremony, or at most a monotonous procession. Time is necessary to make progress. The Waltz, the Polka, the Varsovian, were not created in a day.

From this point of his history M. Fertiault hastens onward, hardly deigning to notice the rude dances of the Gauls, to times when dancing became a favourite amusement at Court. His pen is electrified when he writes the word *ball*! The blaze is so dazzling that he cannot lift more than one corner of the curtain.—

Louis the Twelfth, wishing to display the magnificence of royal pomp to the town of Milan, gave a solemn ball, to which all the nobility were invited. This ball was opened by the King and kept up by Cardinals De Saint-Severin and De Narbonne, who danced with the most amiable ladies of the court. I only mention the ball of the Council of Trent, given in honour of the son of Charles the Fifth, and opened by the Cardinal Hercules, of Mantua, to place it in proper chronological order. Catherine de Medicis had a marked taste for festivals, and this taste brought ballets and balls decidedly into fashion. One of the more brilliant festivals organized by this princess was that which took place on the occasion of the marriage of the Duke de Joyeuse with Marguerite of Lorraine, the sister-in-law of the King. Some of the dresses worn at this solemnity cost nearly 80,000 francs. It was at this *fête* (pardon, ladies, each creature must have its share) that the first horse-ballet was given, invented, it is said, by the Sybarites, resuscitated by the Florentines in 1608 and 1615, and improved by Louis the Thirteenth and Louis the Fourteenth in their splendid carousals. The diplomacy of the Queen-mother required gay appearances to hide her black designs,—a dark ground covered by embroideries of gold! We may, without entering into details upon the ball which she offered to her son on the little island formed by the Bidassoa, on the occasion of his interview with Charles the Ninth and the Duke of Alba, turn to the still more famous entertainment given at the Louvre in the great Salle de Bourbon by the Queen, the princesses, and all the nobles of the court. Judge of the ardour of the noble figurants when I tell you that the representation of the ballet, called 'Circe and her Nymphs,' lasted from ten o'clock at night till four o'clock the next morning. Recitations, music, decorations, every detail had been given to special artists; but the celebrated Beau-Joyeux, whom we shall meet again, is the person who most distinguished himself as a director on this occasion. He was an Italian. His real name was Balthazarini. He was one of the finest violin-players in Europe. The Duke de Brissac had sent him to Catherine de Medicis, who had given him a place near her as *valet-de-chambre*. He was the most conspicuous object of Court gossip, and contemporary poets made him the subject of laudatory rhymes. But these *fêtes* soon passed the bounds of propriety. The Italian lady had sons to be kept in a constant whirl, and nocturnal delights succeeded in keeping them giddy. Henry the Third disguised himself in female attire, the ladies appeared in men's dresses. At a ball given by the Queen to the King, the most beautiful ladies of the Court waited upon the guests, with their throats bare and their hair loose. And think of this—the little bells which jingled through this frivolity faintly preluded the tolling of that bell which announced the Saint Bartholomew!

This view of history from a dancing-academy is sufficiently amusing, and will find readers easily in Paris. We are tempted to make a further extract, in which the author skips from reign to reign, noticing only the balls peculiar to each sovereign.—

I am glad to turn to the gallant and loyal Henry the Fourth, who did not dance to hide any black deed. It was a true enjoyment to him to add a step to the lively *tricollets* (of which we shall have something to say in an early chapter). This good King was brought up in a country where people dance and gambol from the cradle. More than eighty ballets were executed at the Court in less than twenty years.

Sully, the austere minister, was the soul of these festivals,—and the King found that something was wanting in them when his old friend was not there.

* * The Court of Louis the Thirteenth was sombre, but relieved here and there by light passages of buffoonery. The ballet of *Maitre Galimathias, pour le Grand Bal de la Douairière de Billebahaut et de son fanfan de Sotteville* was one in which the King himself danced. In 1630, the Duke de Nemours organized the ballet of The Gouty Men,—in which, being himself gouty, he figured, seated in his arm-chair and beating time with his stick. Let us rapidly pass a stiff, wearisome ballet given by Richelieu. In this ballet the Cardinal personified the world. He had Mount Olympus for a head-dress, and for a costume a map, where *France* was written upon the stomach, *Germany* below, *Italy* upon one arm, *Spain* upon one leg, and upon the back *Australian Land* and *Unknown Land*!

Having dismissed the chronological section of his work, M. Fertiault rushes into the mazes of the Courante (which Louis the Fourteenth is said to have danced perfectly, and which according to our author "exhaled a perfume of nobility"), the Tricoltet, the Gaillarde, the Traquenarde, and the Pots-Pourris, but we must decline to follow him. His reverence for his art leads him occasionally to flights which provoke the ridicule of the vulgar world. How seriously he draws the attention of his readers to the reverential manner in which the "*magistro-danseur*" Guillemin declares that pupils should receive their dancing-master. We cannot resist a short quotation.—

It is proper that the pupil should advance to meet his master when he arrives. He should receive him very politely and make two bows to him,—the first very low, the second less profound. He should then conduct him to an arm-chair. Directly the master is seated the pupil should present his two hands to him, place himself in the first position, and make four bows—the knees being well out. The first bow should be very low, the second less, and so on—taking care always not to lift the heels. Having made these bows, the pupil should walk forward, then backward, and then to the right and left—and, in short, as the master may direct. The lesson finished, the pupil should be careful to conduct his master to the street-door. Here he should make two bows to him again—the first low, as before,—thanking him at the same time for his trouble.

We will take leave of M. Fertiault with a caution:—let him not depend upon the vague reports of his countrymen as his authorities on the social customs of England. To these he is probably indebted for the following:—"In England the gentleman is introduced to a partner,—and it is usual for this partner to dance with him all the evening." The author has probably reversed a Swedish custom, which demands that the gentleman should choose his opposite gentleman for the entire evening.

The Druses of the Lebanon: their Manners, Customs and History. With a Translation of their Religious Code. By G. W. Chasseaud. Bentley.

Mr. Chasseaud was born in Syria, where he passed many years,—and, possessing a knowledge of the various native dialects, entered freely into the life of its interesting mountain tribes. He was principally attracted by the Druse population of Anti-Libanus, and learned early to appreciate their feelings, to inquire into their opinions, and to ponder over their romantic history. To him no scenes are more familiar than the Plains of Promise, with their luxury of light and colour, the gold-tinged peaks of Lebanon, the immemorial cedars, and the sweet fruit-groves of Judah. He was nurtured among them, and had, therefore, opportunities for observation which no mere tourist can enjoy. In his book he has described the manners of the Druses, and sketched the region

they inhabit. It has long been an object with travellers to discover the sources of the faith prevailing among that curious people, and Mr. Chasseaud was so fortunate as to obtain from a Maronite of the Lebanon an Arabic version of their Creed, which he has translated in the Appendix. To those who are curious on such matters we recommend a study of this extraordinary document, which describes the creation of the universe by Chaos. We prefer to glean from Mr. Chasseaud's book some particulars on the more genial topic of social affairs among the Druses. Into these the writer enters minutely, affording a lively picture of life among the ancient tribes of the Lebanon—full of suggestive touches and characteristic narrative. Of the stories and legends he has collected, the best are too long for extract; while in the accounts of ceremonies, festivities, and daily habits there is a tendency to amplification, which often fatigues our attention and materially detracts from the pleasantness of the style. Otherwise, the volume is one of remarkable interest.

The Druses—a special people, isolated by their faith, their manners and their history—live apart, mostly in villages of their own, and in separate quarters in such places as are divided between them and the Maronites—often their enemies and never their friends. One of Mr. Chasseaud's earliest glimpses of their country was in the "season of yellow fruitfulness."

"To the left, and immediately under us, are the houses and gardens of the village itself; beyond this, again, a vast table-land, gradually undulating and thickly covered with the most luxuriant olive groves, above whose comparatively stunted growth taller palm-trees here and there rear their exalted heads, like so many careful watchmen, left there to guard the olives against all invaders. At the present moment of gazing, the cool sea breeze is rustling mightily amongst the branches of the olives, scattering the dry leaves and twigs and spreading the surface of the earth with the golden-tinged mantle of autumn; but all this is nothing to the rustling and havoc that will ensue amongst those branches when the harvest season for olives shall have arrived; then men and boys will be perched upon every available branch, shaking the very existence out of the trees in their endeavours to gather in as abundant an harvest as possible, whilst the women and girls, with out-spread mats, expanded aprons, and plentiful baskets, catch and collect the showering olives as they fall; and finally gathering these into the baskets, assort them for the various purposes they are intended to serve: some are preserved in salt and water, the rest are converted into oil."

They retain in the old age of their race some beautiful customs of the primitive time.—

"It is a remarkable fact, and one which proves the very ancient standing of the habits and customs of these people, that when a man has once descended from a tree, having shaken off as much fruit as his strength permitted, he will upon no consideration shake that tree again, however much fruit may have tenaciously adhered to the boughs. What is left is considered as the portion of the poor and the gleaner: in this instance, the Druses, in common with all classes inhabiting Syria, act in strict accordance with the law contained in Deuteronomy, 24th chapter and 20th verse: 'When thou beatest thine olive tree, thou shalt not go over the boughs again: it shall be for the stranger, for the fatherless, and for the widow.'"

In the same spirit, they never reap the fields without leaving a full measure for the gleaners,—they rarely muzzle the ox "that treadeth out the corn,"—and they will not yoke a bullock and a mule together. However, with this tenacity in their adherence to their own usages, they have some tolerance for strange fashions, and have now, we find, learnt to recognize even a European hat, though when Burckhardt visited them, one of their maledictions was—"May

God put a hat on you!" At present they compare it to "a cooking-pot," and laugh at the absurdity. Half-a-day in a Druse home is pleasantly suggested by Mr. Chasseaud. The patriarch of the family having gone to his song and his plough, labours until noon.—

"In this interval, the wife has rolled up the mattresses and stowed them away for the day; she then sprinkles the floor over with water, and carefully sweeps the house and the front yard. This done, she lights a fire, and setting thereon a huge cauldron of water, she wakes up the children and makes them breakfast sumptuously; for in their opinion unless children eat immensely they can never thrive or remain healthy. After breakfast the warm water is brought into play, the faces and the hands of the children are purified, and with what remains she washes and scours up all the plates and cooking utensils; this done, she begins to think about her own personal appearance, tidies up her hair and her dress as well as time and her limited wardrobe will permit, and if there is any little washing to be done, she takes this in hand and goes through it at once. Then comes the consideration of what they are to have for dinner. Going into the little garden behind the house, she plucks a few love apples, or any other vegetable that may chance to be in season; then she hunts up the henroost for new-laid eggs; and these, in addition to the goat's milk, the cheese, and the burghol already alluded to, constitute the ingredients ordinarily cooked for their mid-day meal."

There are two sacred cities inhabited by the Druses, Ammatour and Bachleen. To these they rally in times of danger, and in them they deposit their holy books. Conflicts between their sect and the Christians were, some years ago, more frequent than at present. A Syrian account of one of those dreadful ebullitions of fanaticism is given by Mr. Chasseaud in vivid language, which preserves the poetry of the original. After saying, in the manner of the old tragic writers, that nature had changed her aspect, to forebode the crimes and sorrows of man—that the air was heavy with mournful omens—that vultures lingered on the mountain tops—that women became pale as they sat by their fires—that the bee gathered no honey—and that the birds wandered not from their nests—Abou Shein, the narrator, continued:—

"I went out once, just to see what kind of night it seemed, and I don't think I ever saw the stars looking more brilliant, or at a less distance from the earth. Intense solitude prevailed everywhere; every leaf of the sturdiest tree stood out in bold relief against the clear bespangled canopy of heaven; even the very cricket seemed spell-bound, and the owl and the jackal were nowhere to be heard; far away, looming through the haze of night, was the snow on various peaks and higher passes. I crept slowly and sadly to my bed again, for there was something horrible and saddening in such a perfect stagnation of nature; it seemed as if the whole machinery of the universe had come to a standstill."

Half-an-hour passed away, and he tried to rest.—

"I was just dozing off, and I know my wife was asleep for I heard her snoring distinctly; suddenly I seemed to awake to the perception of a very distant, very imperfect, very uncertain sound; and yet, though for the life of me I could not at that moment remember what it was, I knew I had heard it somewhere before; and this knowledge instinctively seemed to arouse me up. Another second, and the sound was repeated, still distant and indistinct, but beyond doubt the same as I had heard before: I raised my head gently from my pillow, and leaning it upon the palm of my hand, tried vainly to recall to mind where I had heard that horrid sound before, or why it made my heart leap so with anxiety and vague alarm. A third time the thing came louder and more distinct than ever, floating like ice upon that silent night air, and freezing my blood as it sped by. I instantly jumped up, and ran out of doors: there, where half an hour before I had silently contemplated the intensely quiet picture, what a change had come over the scene! A red glare shot up on

every mountain height, and was instantly answered by dozens of minor beacons in all directions; so that the whole firmament seemed to have taken fire, the reflection of which was peculiarly bright on the snow. As beacon light after beacon light spread the alarm, the cry arose for warriors and horsemen to arm themselves; criers ran up to the mountain tops and those perspicuous places where the beacons glared, and thence they summoned their credsmen to arms. Catching at the words wafted from hill top to hill top, I ran to our own village beacon, and instantly kindled it. This aroused all the villagers, and I summoned them in the names of our chiefs and elders to buckle on their swords and seize their lances, for the Philistines were advancing against us."

It was an attack of Maronites; but so perfect was the organization of that martial community that, within twelve hours, twelve thousand Druses had assembled to repel them. They were victorious, and the war-cry was not for a long time heard again on the mountains. The Druses of the Lebanon number at present about 29,000, and, says Mr. Chasseaud,—

"Though not the most numerous, are acknowledged to be the most warlike and courageous people inhabiting the Lebanon; and occupying all the southern portion, the western slope of Anti-Lebanon and G'bl il Sheik, they have upwards of forty large towns and villages inhabited exclusively by themselves, and nearly two hundred and thirty villages occupied by a mixed population of Druses and Christians; whilst in Anti-Lebanon they are also possessed of nearly eighty exclusively Druse villages. The country about these parts may be said to be almost uniformly successive hillock and vale, every position affording a means of security, and excluding the fear of invasion."

They cultivate their land industriously; they are bold, honest, enterprising, and hospitable, but have little religious sentiment,—since their faith is a mystery, the secrets of which belong to a priestly class. One of their popular customs exhibits a strange habit of suspicion.—

"Another singular feature of this class of Druses is their refusing to receive money, or to partake of food, in any other Druse's house, lest such food or money should have come by improper means into the hands of the donor. Consequently, when they have sums of money due to them for the produce of their vineyards, or for the sale of their silk crop, they invariably employ a third party to change such money into other coins, so that the cash they pocket cannot be directly associated with the original donor or purchaser."

A nobler trait is shown in the maintenance of their country as an asylum and a land of refuge.—

"It is well known, even at the present day, that should the prince ever be tempted by bribery or any other cause to deliver up any man who had sought and found protection amongst the Druses, the whole country would rise to frustrate such a breach of hospitality, and prevent such a stain upon their national reputation. Even that dreadful miscreant Djazzar Pasha, whose name spread terror all over the East, and whose deeds of infamy have been unrivalled in the calends of cruelty, even this man, who had invested the government of the mountains in the hands of his own creatures, never could force them to give up a single refugee; they protected him so long as they were able, and when threatened with imminent danger assisted him in effecting his escape to the remotest parts of the empire."

One of the Druses described to Mr. Chasseaud the palace of his Emir, with marble staircases, mosaic floors, Turcoman carpets, silken hangings, velvet divans, walls painted by artists, gold and silver decorations, and every kind of opulence fantastically displayed. Who, that had visited these modern imitations of the "thousand apartments, each more beautiful than the other," would not quit them gladly to tread the stones of Ezra, the ancient city, not yet desolate?—

"Barred in with all his family, one solitary inhabitant might, from the peculiar construction of his

dwelling, set at defiance twenty invaders, by retreating as necessity obliged him, first from the courtyard into one of the principal chambers, and so from this one into all the others, till he should emerge again at the opposite side, to the room where he took refuge. All the houses are built upon arched foundations, which, in a great measure, accounts for the fact of their having resisted the most turbulent subterranean shocks, which spread devastation through many villages and towns in the same latitude. A very remarkable feature in connexion with the great antiquity of this place, is the singular fact of several of the buildings possessing doors hewn out of the solid piece of stone, which work upon hinges of the same material, and which must assist, when properly closed, in more effectually excluding the heat than any other material which could be used for such a purpose."

It will be seen, without further remark from us, of what description is the interest possessed by Mr. Chasseaud's book.

TRANSLATIONS.

The Lusiad of Luis de Camoens, closely translated. By Lieut.-Col. Sir J. Livingston Mitchell. Boone.

The Iliad of Homer, with Notes. By W. G. T. Barter. Longman & Co.

Indian Leisure. Petrarch on the Character of Othello, Agamemnon, the Henriad, Anthology. By Capt. Robert Guthrie Macgregor. Smith, Elder & Co.

THERE are versions, and there are perversions. To "traduce" and to "overset" are two English verbs indicating translation, which might oftentimes be employed literally in English without violence to truth. It is curious to observe how persons, though unable to complete one page of original verse which shall be smooth in cadence, clear in the sequence of ideas, or direct in the narration of incidents, will venture deliberately to "translate" some masterpiece of foreign Art by Homer, Virgil, Dante, Schiller, Camoens, Racine,—never adverting to the manifest immodesty of the attempt. When it is privately undertaken as a pursuit, the study of language and versification cannot be continuously exercised without gain to the student; but should a young Lady take her Isaiah in Hexameters to the "Chiswick Press,"—critics would be justified in calling such waste of paper and ink by its right name. Two of the three volumes before us remind us of the prophecy set-afloving to which we have referred. They will be sufficiently reviewed by verses "turned up" (as schoolboys say) at random. These, moreover, need not be many.

From 'The Lusiad'—which Sir Livingston Mitchell informs us was brought into its present shape "chiefly under water, in a small clipper, during a voyage round Cape Horn"—a pair of stanzas will suffice. The first is the stanza which opens Canto II.—

Now at this time the lucid planet shining,
Which into hours the joyous day divides,
Reached the desired goal slowly declining,
To where the celestial light from mortals hides;
The maritime dwelling where with Night reclining,
Rose Erebus, who to ope the gates abides,
When the dissembling people came on board
The vessels almost before they had been moored.

The second is the stanza which opens Canto III.—

O thou Calliope, teach me how to sing
What the illustrious Gama did relate:
Inspire immortal song, and voice divine,
In this mortal breast, whose love for thee is great.
So may the bright inventor of medicine,
To whom thou didst bear Orpheus, never abate,
For Daphne, Clitia, or Leucothœ, the flame,
He owes to thee alone, O beauteous dame.

There is not a page which does not afford matter equally curious in point of rhyme or reason with that contained in the sixteen lines above cited.

Less extract will suffice for the second volume

of this triad. Mr. Barter's 'Iliad,' in the Spenserian metre, is even more remarkable than Sir Livingston Mitchell's Camoens in *ottava rima*. It is headed by a brave Preface, in which Mr. Barter speaks with condescending qualification of his predecessors. The volume is pursy and the type large. But what experience could have prepared the critical or lay reader most impressed by the vanity of human enterprise, for a version of which the following nine lines are a fair sample? The volume opened on the thirty-seventh verse of the Eleventh Book.—

So these then turn'd again and Trojans slew.
Th' Achæans fleeing Hector breath'd now glad.
These took a car and men, plebs' bravest two,
Percosian Merops' sons, that knowledge had
'Bove all in prophecy, and sons forbade
To go to man-destroying war. Not they
Would heed, by black death's destinies y-lad.
Spear-fam'd Tydides Diomed that day
These reft of sense and soul, their bright arms took away.

—There is, assuredly, nothing equal to this in Chapman, or in Pope, or in Cowper.

'Indian Leisure' has yielded fruits less posterous in their quality than the above. The tasks of rendering Milton's sonnets into French, or of representing Mrs. Browning's sonnets "from the Portuguese" in the Portuguese from which they were not translated, are tasks little harder than is an attempt to convey the flavour, delicacy, and polish of Petrarch in our ruder and more muscular English. Some translations of his sonnets by the late Lady Dacre have been accepted by Italians as satisfactory,—but these have been rarities. Thus, Capt. Macgregor's limited success is not a discredit to his powers so much, perhaps, as to his judgment. The soundness of this may be questioned from first to last. After Petrarch we meet the 'Agamemnon' of Alfieri, with some alterations, in an English dress,—and this is followed by a new version of an epic, which we suspect few persons care to read in English or in French, the 'Henriade' of Voltaire. Then, why must our paraphraser try his hand on 'Italia, with her fatal gift of beauty,'—that personation as hackneyed as Hope with her anchor or Justice with her bandage? Why once more render 'Napoleon's Midnight Review,' which with its hackneyed compeer ballad, 'Sir John Moore's Burial,' we would fain let sleep for a dozen years to come? Some original verses are thrown together in the last pages of Capt. Macgregor's volumes,—but our *sors* among these proved to be a new set of words to the Russian chime (if, indeed, it be a Russian chime at all), which was patched and arranged by Moore, in order that he might have an excuse for writing his musical melody, 'Those Evening Bells.' The impression of want of tact produced by the foreign selections of Capt. Macgregor is maintained by his original verse.

The Modern Vasari—[*Der Moderne Vasari*].
By Dr. Wilhelm von Schadow. Berlin, W. Hertz; London, Williams & Norgate.

Few families could present the world with a cluster of names so illustrious in the history of Art as the family of Schadow. First comes the father, Johann Gottfried Schadow, once Director of the Academy of Berlin, a sculptor in the days when old Fritz and his generals were deemed the most fitting subjects for plastic art,—but, at the same time, one of those men whom, lonely in their own day, history consents to regard as the forerunners of great revolutions. Then comes his good son, Rudolph Schadow, likewise eminent in sculpture, but cut off, in the midst of his career, at the early age of thirty-six. Lastly, comes Friedrich Wilhelm Schadow, the painter,—the present Director of the Düsseldorf Academy,—the representative, both with pen and pencil, of Christian Art,—the companion of Cornelius,

Overbeck, Veit, and other men of whom Dr. Nagler says, "they made the reconquest of the lost Paradise the problem of their lives."

Although the elegant volume now before us bears the name of "Dr. Wilhelm von Schadow," without "addition" or explanation, we have no hesitation in ascribing it to Friedrich Wilhelm. An anonymous old painter, who is the chief oracle of wisdom throughout the book, and who is evidently identified with the author, is represented as the familiar friend of those artists who were the familiar friends of F. W. Schadow,—and has the same notions with respect to Christian and heathen Art that are entertained by the chieftains of the Düsseldorf school. Lest any sceptic should still remain dissatisfied, on the score of the absent "Friedrich," we will cite the title-page of a book, known to be by F. W. Schadow, which runs as follows:—'*Ueber den Einfluss des Christenthums auf die bildende Kunst, von W. Schadow.*' If this will not suffice, collateral evidence is good for nothing.

The reminiscences of artist life ('*Erinnerungen aus dem Künstlerleben*'), which Dr. Schadow has collected into '*Der Moderne Vasari*,' form, according to the title-page, a novel (*novelle*); but, in point of fact, the portion of the book which entitles it to this appellation is the least important and instructive. Two young artists,—a landscape painter and a painter of *tableaux de genre*,—have certain difficulties in obtaining the daughters of a certain "Hofrath,"—and their mental sufferings,—treated not sentimentally, but comically,—and ultimate triumph,—form the theme of a somewhat trivial tale. But, even this tale is not without sparkling episodes. A description of a party of artists,—who, amid the fumes of tobacco, squabble about Art and Politics,—is given with such characteristic touches, and is so full of life and animal spirit that its length alone prevents us from extracting it. There is also much amusing matter connected with the rehearsals and the final exhibition of *tableaux vivants*, which will remind the reader of the comic side of Hoffmann, especially as manifested in the entertainment given to the Prince, at the commencement of 'Kater Murr.'—The following mode of putting a case, that may possibly arise from the exhibition of living pictures, is, for instance, intensely Hoffmannesque:—

When there are many figures in a *tableau* it frequently happens that only the head, or the arm, or the leg, of many of the persons is seen by the public, whence, from economical motives, the exhibited parts are alone attired in appropriate costume. Now, sublime and brilliant as the picture may appear from the front, its aspect from behind is exceedingly ridiculous. From the latter point of view, we see camisoles, shirt-sleeves, a right leg in red tights, a left one in a grey trouser,—and one may safely assert that here there is no step at all from the sublime to the ridiculous. One single movement might destroy the entire effect.

From the days of Hogarth's 'Actresses in a Barn' the contrast between the realities and idealities of the stage has been a frequent source of mirth; but this notion of performers,—with one limb only in costume,—is a touch of absurdity that is altogether fresh. As for the *naïve* manner of hinting at the confusion that would ensue in the event of misplacement, it is simply sublime. "One single movement," quaintly observes the author, "might destroy the entire effect." He does not trust his powers with a description of the terrible confusion that would ensue,—he shows the cause of possible woe, and then acts like Timanthes covering the face of Agamemnon.

Not only some of the humorous details, but even the form of the book, remind one of 'Kater Murr,'—for the odd scenes to which we

have above referred have, beyond the fact that they take place within the world of Art, little more to do with the serious object of the work than the novel which Hoffmann's cat uses as blotting-paper, and which is printed by mistake with Grimaldin's own manuscript, has to do with the feline autobiography. The purpose of the author, when he does not indulge in quips and cranks, is to give a series of lives of those painters and sculptors who have influenced Art from the dawn of a new mode of thought in the last century to the times of Overbeck inclusive. An old painter, who is simply called "Der Alte," who has strong views in favour of "Christian Art," and who is shown in the frontispiece absorbed in meditation, and puffing out huge volumes of the smoke which he considers the fitting symbol of the world's vanities, is supposed to be compiling a sort of Supplement to 'Vasari'; and the results of his labours are communicated in a conversation with one or two old friends,—whose questions and remarks render the biographies fitting vehicles for opinions on Art and Art-education in general.

The author's manner cannot be better shown than by the conversation which ensues between the "Old Man" and the "Inspector" on the subject of Asmus Carstens, the second artist on the list,—Raphael Mengs being the first:—

At the beginning of the last century there was a lack both of a good method and also of the impulse given by great minds; and Mengs, by restoring the former, found a field in which minds of higher organization could express their ideas by means of form and colour. A genius of this kind was Asmus Carstens, born at St. Jürgen, near Schleswig, in 1754. The strength of his impulse to artistic production may be proved by the fact, that neither the circumstances of his childhood, nor his original destination for the mercantile profession, could suppress his natural inclination. Among the Germans he was the first to perceive that a poetical idea must lie at the foundation of every true work of Art. "Necessary as this poetical idea may be," remarked the inspector, "it does not seem to me that it is all that is required."—"Assuredly not," exclaimed the old man, "otherwise our German Carstens would hold the same rank as Michael Angelo and Raffaele. However, if we weigh the matter closely, the position he actually takes rather belongs to his times than to himself. He was, as it were, a wondrously beautiful plant, which growing on an unfriendly soil, and exposed to a destructive climate, fades away before it attains maturity; and consequently he remained, like many of his followers in that day, little more than a sketch of his proper self."—"That is true," said the inspector; "we may see from his compositions what he might have become."—"I can readily imagine," continued the old man, "the agony that a mind must feel, when it carries great ideas within itself, and never finds means and opportunities to realize them. * * The ordinary public cannot surmise, from a hasty sketch in water-colour, how great and sublime was the poetical fancy of such an artist; but we who have that faculty, and can mentally supply what is wanting, are bound to pay Carstens, now he is dead, that honour which is his due, especially as it is not by his own fault that he remained undeveloped."—"A poor compensation," said the inspector, smiling, "for if he is in heaven, he will care little about the praises of man; and if he is in—the other place, nothing can help him."—"Cannot one then take into another world," said the old man, "the consciousness of one's honest effort to overthrow a false idol in Art at the sacrifice of one's own interest? Is not such an effort a striving after truth; and has not this a decided moral worth? The Herculean task was allotted to Carstens; and he did much towards the cleansing of the Angéan stable. He had a constant struggle for subsistence; but, nevertheless, he attempted to visit Italy,—vainly indeed, for he only got as far as Mantua and Milan, and was forced from want of means to return to Lübeck, where for five years he gained a living by portrait-painting."—"No doubt, while there," remarked the inspector, "he painted many a

rich old hunks, who stood in awful contrast to the images of his imagination."—"It is written," continued the old man, "In the sweat of thy brow thou shalt eat bread,"—and so it was with him. We have a right to believe, however, that the Muse sometimes wiped the heavy perspiration from his brow, for otherwise we cannot account for the fact, that his compositions obtained for him a Professorship, with a salary of 450 thalers, at the Berlin Academy. From these compositions it was seen, no doubt, what was his proper vocation."—"Still his talent could not have been sufficiently acknowledged in high quarters," observed the inspector; "for otherwise, besides this small salary, he would have received an order for some great work, that would have furthered his development."—"This, unhappily, was not the case," continued the old man; "so he wandered with his little pension to Rome, where he lived very much alone, and produced an abundance of wondrous fine creations. His mind, like the other superior minds of his day, took a thoroughly antique tendency. Orthodox Protestantism had lost its value in the eyes of these men, and Catholicism was still more repulsive. They, therefore, only felt at home on the soil of Philosophy, which to thinking artists was principally revealed in the orientalizing and poetical works of Plato. I know nothing finer than Carstens's composition of Plato's 'Symposium,' where Alcibiades is crowning Socrates. The Antique Myth, apprehended in the Platonic spirit, was the proper field for his intellect. His 'Bark of Charon,' his 'Argonauts,' his 'Perseus and Andromeda,' his representation of 'Night, with Sleep and Death,' are all immortal ideas, and might have been worthily employed by a true Mæcenas in the adornment of large spaces."—"I am still doubtful," suggested the inspector, "whether when so great a mind as you have described is imperfectly developed, it is not in some measure its own fault."—"You may be right," returned the old man; "a mind that has at command such a wealth of poetical invention may have harder struggles in acquiring that spirit of perseverance which is required for a profound and penetrating study, since the work of drawing and painting after nudes, when it is thoroughly done, is generally unpleasant and sometimes tedious. Such work is downright labour,—but nevertheless it is indispensable if we would clothe our ideas in proper form and colour. In exertions of this kind, minds like that of Carstens take no pleasure. They would always like to see their thoughts start forth fully armed, like Pallas from the head of the Olympian Zeus. He who has had any experience of artistic production, knows very well that there is no happier moment for the called one (*der Berufene*), than the moment when independent of all external influence he broods over the child of his imagination. He then lives in an inner world,—a king in a kingdom which he himself has created. His subjects are the figures, which he can dispose of according to his own good pleasure,—and with his pencil as his sceptre, he transposes them, alters them, or rubs them out, just as he chooses, without a chance of opposition, and without running any risk beyond that of spoiling a good sheet of paper."—"That is very charming in your description," remarked the inspector; "the worst of it is, that one may starve to death among these delights."—"That was the case with our friend Carstens," said the old man; "he died in the year 1798, poor, much neglected, and only acknowledged by a few penetrating minds, among whom we must reckon the learned Fernow, who afterwards became his biographer."

Close to Carstens come our own Flaxman, Canova, and Gottfried Schadow, the author's father, all to be treated (even Canova) with respect,—and the stream of pleasantness is only interrupted by the old man's correction of the French mistake, that David was an essential reformer of Art. The names of the above are those of the real benefactors. As for poor David, "his art was, in fact, the expression of the heartless, cruel and cold fanaticism of that republican party, of which he was a zealous adherent,"—"showing, moreover, nothing but the unartistic spirit of his age." Thorwaldsen—whose biography is narrated with wondrous spirit—is heartily praised, though with a dis-

count on the score of heathenism; and then the old man comes to Cornelius, Overbeck, Rauch, Rudolph Schadow (the author's brother), and a few others, all of whom he describes in a most delightful manner, generally with the warmth and enthusiasm of a personal friend and fellow-labourer.

If we extracted all the biographies in the book, we should give our readers a quantity of pleasant reading; and where the whole is so entertaining and so instructive, we feel that the choice of any part in preference to the rest must necessarily have something of an arbitrary appearance. Gratitude to an author who has afforded us an amount of pleasure not often to be derived from the perusal of German prose would induce us to select the lives of Gottfried and Rudolph Schadow. Nevertheless, we venture to prefer Overbeck, though less biographically treated, partly because of his eminence at the present day, partly because his name, like that of Carstens, serves to introduce several sound remarks. The old painter is supposed to fall into a sort of reverie.—

He half-closed his eyes, old recollections arose once more before his mind, and it seemed to him as though he were entering the cell in the convent of St. Isidor, where he had seen his friend Overbeck for the first time. Overbeck had come with several of his fellow-students from Vienna to Rome, and each of them had hired a cell in the deserted convent, though among all the cells there was not one that made a proper studio. The former refectory of the monks was their Academic Hall, where in the evening they all met to draw after the nude figure, or to stand to one another as dressed models. The Academy at Vienna had sentenced them to a sort of honourable banishment, solely because from the very depth of their own apprehension of nature there arose a method of imitation which was directly antagonistic to the weak and insipid spirit of their day. The old painter, who had found himself in a similar state of opposition to his times at Berlin, and who had been of a less mild and unpretending disposition, recollected with what amiable modesty, indeed almost in a tone of apology, Overbeck had told him of his banishment, adding involuntarily the following remarks:—"What after all was our crime? What did we desire, and what has been the result? We felt an impulse towards a firm, clear Idea, towards a definite, correct outline of form, in opposition to a wavering, cloudy and insipid age. An easy indifference had diffused itself over Art as well as other branches of intellectual production." Is it not the desire for a sharp outline, he thought, which has been our guide in every respect,—even beyond the regions of Art? We had scarcely outgrown our boyhood when our masters were angry with us because, in spite of them, we cut our chalk to as fine a point as possible that we might make the only correct sketch of the model before us,—and was it not the same ardour for truth that afterwards, in a totally different region, exposed us to much misapprehension and blame? He reflected further on the mental development of his friend Overbeck,—how happy he had been in his youthful training,—how his father, a noble and distinguished man at Lübeck, himself a poet, had carefully fostered the tender genius of this poetical talent, and had even given him a learned education to a degree that is seldom found among painters or sculptors. Nay, what was more than this, the father implanted in him the germ,—then so rarely cherished,—of a positive religious belief. How happy have you been, my beloved friend,—so, in thought, he continued:—you found so early the firm basis upon which is raised the highest structure in every department of mental productiveness. You recognized the treasures of Art and poetry derived from Christian Revelation, and wished to restore to their due honours those who had been long obscured and forgotten. The whole time that he had passed with Overbeck and his associates, who were afterwards joined by Cornelius and the two Veits, seemed to him to denote a peculiar crisis. Although these young men had previously held no communication with each other—either personal or epistolary—they, nevertheless, agreed wonderfully in all their views. These were certainly opposed to

that Greek cultivation which was then considered the highest by the larger portion of the intellectual world. The conventional French imitation of Greek art and, still more, the *rococo* style (*Zopfstil*) had already been overcome theoretically by Winkelmann and Lessing,—practically by Canova, Thorwaldsen, Flaxman, G. Schadow, and others in the Fine Arts,—and by Goethe and Schiller in poetry. The unnatural had disappeared, and a natural soil was once more attained. When now, through the exertions of Tieck, the brothers Schlegel, Novalis, Wackenrode, and others, the romantic school, which was intimately connected with Christian Revelation, made its appearance, it found violent opponents among those eminent men,—nor can it be denied that the "*Romantiker*" rather recognized the beauty than the eternal truth and saving power of Christianity:—that is to say, they rather looked upon Christianity as a mine of poetical ideas and feelings, and used it as their predecessors had used the ancient myths. Novalis, F. Schlegel, Schütz, and a few others, may have been exceptions. We artists, at that time, and with the best intentions, he said to himself, engaged in a similar war, the extent of which we did not know, but which still continues, and the end of which lies in the remote distance. Strangely enough, it began in the fields of Poetry and Art, and from thence gradually communicated itself to the serious speculative sciences,—nay, it now even enters the region of public political life. This cause of development may be compared to the transition from thought to act. I may be mistaken, exclaimed the old man, and it does indeed seem strange that such a revolution in ideas should have emanated from the poets and artists! Whoever has only once seen Overbeck, has only once heard him—so he continued in his reflections—will have no doubt of the purity of his intentions, the greatness of his knowledge, and the profundity of his views. An amiable sympathy with every one is displayed in his general expression. One may be of a different opinion, but it is either mistake or wilful misunderstanding, if another judgment is passed upon this remarkable man. * * * The error, according to my opinion, in which Overbeck and his companions in Art were involved during the second decennium of this century, and which, to a certain extent, exercised an injurious influence on their artistic culture, was just this:—that with them the study of nature, on which alone perfect execution depends, was far too general in its character. Every one of them had in the convent of St. Isidor a small cell which afforded scarcely room for their own pictures, much less for a model; and though they made studies after models in the repertory, they painted their pictures from memory only, fearing that the use of the model would render them too *naturalistic* and weaken their ideal conceptions. With a man of Overbeck's memory for form this was not so fatal; but the others did far less than they might otherwise have done, and many of them fell altogether into mannerism. Afterwards they quitted a residence that was so ill fitted for artists, and soon perceived that especial studies of nature must be made for every single figure, if artistic accuracy of expression is to be attained. Since, however, nothing is more difficult than a judicious application of studies from nature to a given natural object, and every work of Art has either too little or too much of the natural element about it, these artists preferred the former defect, and not one of them—not even Overbeck—ever attained that perfect execution that was possible among the great artists at the close of the fifteenth century in a thoroughly correct school. There is always something wrong when a painter who executes large compositions cannot paint a good portrait, and we have a right to assume that he will not do anything to perfection in the historical department, or in oil-painting generally; for in fresco the deficiency will be less perceptible. With the single exception of Raffaele, the Venetians and the Dutch—those great *naturalists* and accomplished painters in oil—execute by far the best portraits. Whoever has seen Overbeck's studies of the naked model or of drapery—studies which, to his own detriment, he has only made on a small scale—will be delighted with the feeling and refinement with which he has apprehended nature. If he had restrained his preponderating desire for incessant composition—if he had

allowed himself time to draw and paint studies from nature or on a larger scale—his oil-paintings would not have been so inferior to his original sketches and cartoons. He would have penetrated more deeply into the essence of nature; he would have produced, perhaps, less, but what he did produce would have been more perfect,—and, beyond a doubt, he would far more have assisted the progress of painting. We find in the German artists more than in those of other nations a wealth of poetical ideas. We see among them many sketches which lead us to expect that, when executed, they will result in a fine work of Art. Nevertheless, seldom does the promising child become a handsome man, for the Idea loses life in the same proportion as it advances to perfect development,—mannerism arises, and we look back with regret upon the original sketch. How can this be explained otherwise than by the fact, that the artist had no mastery over the means of giving his idea a perfectly natural and artistic expression,—in other words, by the want of a school? This, too, is the reason why Overbeck cannot be ranked among the greatest artists of all ages. He had plenty of the right stuff in him, and it is unfair to make an artist sprung from an unhappy period responsible for the fault that rather seems to be a necessary consequence of his time. If this great genius, with the exception of some pictures from Tasso's 'Gerusalemme,' has treated no other than sacred subjects, this is by no means to be attributed to fundamental one-sidedness. He can find the poetical element whenever it reveals itself, and his preference for sacred subjects is rather to be explained by the fact that he found no others equally worthy of treatment. The artist must produce that which has most completely taken possession of his soul. Moreover, it is my conviction that those very subjects which are selected by Overbeck are just those which demand the greatest force of human inspiration. In the composition of the "facts" of the New Testament he has been excelled by none,—nor can he be easily excelled, for success in these subjects is not to be attained without a great and pure soul, such as he really possesses. The impassioned, energetically powerful style will find less sympathy with a man of his tendency, and he will consequently be less successful in that than others of high endowments who do not live in so pure an element. His works may, on this account, be somewhat deficient in sensual life,—but although in his later productions a certain monotony is occasionally discernible, I nevertheless exclaim "Blessed is the man who is in possession of such uniformity!"

One word more in commendation of this delightful book. It is choicely printed, and adorned with dainty medallion portraits and fanciful vignettes:—an elegant specimen of that publishing art which is unprovided with a special name, but which is so serviceable in covering our drawing-room tables with agreeable objects.

The English in Western India; being the Early History of the Factory at Surat, of Bombay, and the subordinate Factories on the Western Coast. From the Earliest Period until the Commencement of the Eighteenth Century. By P. Anderson, A.M. Bombay, Smith & Co.; London, Smith, Elder & Co.

QUAINT, curious, and amusing, this volume describes, from old manuscripts and obscure books, the life of English merchants in an Indian factory. Mr. Anderson is one of the Company's chaplains at Bombay, and though he has drawn upon Orme, Macpherson, Bruce, Raynal, and other obvious authorities—even on Duff and Mill—he has also searched among the dusty records of Bombay, and gathered from narratives little known, and from letters never published, the materials of an original book. It is interesting to follow our earlier historians and travellers in their accounts of the East. The English, when they settled in India, knew not at first how to adapt their costume to the climate. It was long, in fact, before they made an approach to the boots and umbrella of our

less stately generation. They groaned in the sultry weather with their large hose, their long-waisted doublets, and short cloaks with standing collars. Then, they had ruffs "of twelve, yea, sixteen lengths a-piece, set three or four times double." On their heads were hats of thick velvet, with weighty bunches of feathers. Conceive a dress like this with the thermometer in the shade at 92°! As to the ladies, says the chronicler, they had "a liquid matter, called starch, wherein the Devil hath learned them to wash and dive their ruffs, which, being dry, will stand stiff and inflexible about their necks."

The voyager Terry figures conspicuously in Mr. Anderson's historical notes on Surat. He gives a singular account of his travelling companion, Tom Coryat, the "English Fakier," author of 'Coryate's Crudities.' This worthy was born, in 1577, at Odcomb, in Somersetshire, and early set out on his wanderings. After a tour in Europe he published a book, with a polyglot collection of verses, and a personal narrative, in which he declared that he had walked 1,975 miles in one pair of shoes, which he hung up in the church of his native village as an offering and a memorial.—

"Tom desired to know, and to be known, so as to obtain contemporary and posthumous fame. Unrestrained by poverty, he again started with a determination of traversing Asia, limiting his expense to twopence a day, which he expected to procure by begging. His designs were vaster than his actual labours; for he planned not only a journey through Tartary and China, but also a visit to 'the Court of Prester John, in Ethiopia.'"

To Constantinople—to Cairo—to Jerusalem—to the sites of Nineveh and Babylon—to Persia, Candahar, and Lahore, did this begging traveller go. He learned a little Arabic, and much Hindústání. At Agra he pronounced, before the Great Mogul, a speech in florid Persian, comparing the monarch with Solomon, and himself to the Queen of Sheba, who came to witness his riches and his glory. By this speech he gained about 20*l.* sterling, which sent him happily on his way. One of his adventures resembles that of O'Connell and the fish-woman.—

"Having joined Sir Thomas Roe's suite, he found amongst them a washerwoman, whose native language was Hindústání, and who was celebrated for being a fluent and pertinacious scold. One day, writes his companion, Tom 'undertook her in her own language, and by eight of the clock in the morning so silenced her, that she had not one word more to speak.'"

One of Coryat's qualities was impertinence. He heard a Moolah, calling from a mosque, "There is no God but God, and Mohammed is his prophet," and at once ascended a high building and began shouting in the same tongue that Mohammed was an impostor! Another time, he told a Moolah that he knew nothing of the Koran, and that he (Tom Coryat) was a far better Mussulman. A little folly is a dangerous thing, and this eccentric wanderer was only saved by his extravagance. El-Islam gives a wide latitude to lunatics, and the saucy Englishman escaped accordingly. Vanity seems to have been his principal impulse. With all his economy in shoes, he was an egregious fop, and was continually anxious to know whether the fame of his travels had extended to Europe.—

"What then was his delight to be told by Richard Steele, the merchant, that King James had inquired about him. The eager fop immediately wished to know all his Majesty's words, but alas, after hearing that Tom was well, all that the monarch said was, 'Is that fool yet living?' Equally mortified was he to discover, that in a letter which Sir Thomas Roe had written on his account to the Consul at Aleppo, he was styled 'an honest poor wretch.'"

Temperate in his habits, amid all these

vagaries, he was once induced to drink a deep draught of sack, which killed him, and, adds Fryer, "laid his rambling brains at rest." Thus ended his ambitious journeys, and two stones, not even inscribed with his name, marked his grave.

There are some curious notes here on drinking in India. Surat, long before the State of Maine, had a law imposed on its inhabitants forbidding the sale of intoxicating liquors. But Akbar, after consideration, decreed that to Europeans they might be sold, "because they are born in the element of wine, as fish are produced in that of water, and to prohibit them the use of it is to deprive them of life."

Life in India at that period needed some consolation, if we believe that the roads swarmed with thieves who would cut any man's throat "for the third part of a penny." The "Chinese death," supposed by Thevenot to be the cholera, was also ravaging the country near Bombay.

One more story we will take from Mr. Anderson's book. Towards the end of the seventeenth century many slaves were exported by the English from their Indian factory. St. Helena was among the Company's possessions, and they desired to people it. Accordingly, a cargo of natives was despatched; but, at first, only men were taken. "They will not live without wives," wrote the Honourable Company, and directed its agents to "send near as many female slaves as male." This we notice for the sake of introducing a little picture of Charles the Second. The following is the postscript of a despatch from the Court of Directors to the factors at Surat.—

"His Majesty hath required of us to send to India to provide for him there one male and two female blacks, but they must be dwarfs of the least size that you can procure, the male to be about seventeen years of age and the females about fourteen. We would have you, next to their littleness, to chuse such as may have the best features, and to send them home upon any of our ships, giving the commander great charge to take care of their accommodation, and in particular of the females, that they be in no way abused in the voyage by any of the seamen; for their provision and clothes you must take care to lay it in, and let them be set out with such ear and nose rings, and shackles for ornaments about their legs (of false stones, and brass, but not with gold) as is usual to wear in the country, but let them not be used by them in the voyage, but sent to us apart."

It will be evident from these gleanings, that Mr. Anderson's book contains fresh and amusing gossip, all bearing, more or less, on events and characters of historical importance, and illustrative of the early intercourse between our countrymen and the races of Asia.

THE WAR.

Non-combatants have the literary management of the war this week. *A Month before the Camp at Sebastopol* (Longman & Co.),—and *Sonnets on the War* (Bogue), are the two books of note. The first consists of a series of letters by a young Templar, who assumes the nom de plume of 'Non-Combatant.' The second contains the passionate and poetic utterance of Mr. Alexander Smith and the Author of 'Balder.'

Let us give the *pas* to the two poets. These 'Sonnets on the War' affect no order or chronology,—do not aspire to tell the story of the war; but merely to deal musically and pictorially with such scenes and incidents as appeal most strongly to the poetic instinct. The double labour is very evident throughout. No mark assigns the authorship to each sonnet in the collection; yet few readers of the former writings of these authors will have any difficulty in separating the productions of 'Walter' from those of 'Balder,'—if such separation should strike anybody as being worth the trouble. Many

of the 'Sonnets' are in duplicate,—such as the 'Dedication,' the 'Wounded,' the 'Cavalry Charge,' and 'America.' "Stars" shine somewhat plentifully in all. There is also much of "Death,"—and an awful name is used with the easy familiarity which belongs to the younger race of poets. We will quote a string of these Sonnets, bringing down, in a desultory way, the story to the point at which our prose guide takes it up "before Sevastopol."—

Alma.

The Chasseurs spread like flame from crag to crag,
The lowering English silence was unbroke;
"Forward!" strung all our columns, and a shock
Of valour tingled to the dancing flag.
A wild cheer drowned the cannon. Blind with smoke,
Stumbling o'er rocks, shattered with shell and shot,
We staggered on. Our banner,—glorious rag,—
Is dashed to earth,—from dying hands 'tis caught,
Again 'tis foremost in the stern advance.
Hurrah! We see the faces of our foes!
A blinding gush of flame, a rank goes down,
A stifling vapour hides the bloody close.
Up springs the breeze; and lo! on Alma's crown
Stand sternly-lowering England and flushed France.

After Alma.

God be with ev'ry man who fell or fought!
Let that stern Marshal ever honoured be,
Who asked the price of dazzling victory—
Life! And he threw his down. There slumbers not
'Mong our brave dead a braver man than he.
The proudest tears into my eyes are brought
By the plumed soldiers of my native land.
Sons are they of that worn and wasted band,
Who stood around their king the while the night
Darkened on Flodden. Oh! with hearts as light
As if these wild heights were a summer feat,
They marched to death. Their ruined ranks were true
As crumbling squares at deadly Waterloo,
On which vain hurricanes of battle beat.

The Cavalry Charge.

We mourn them with remorseful tenderness,
And yet, methinks, our tears should be denied
By a proud effort. When they so have died,
What is a little breathing more or less?
"Woe's me! each bosom was a Russian targe."
"Who would not pay that priceless price to feel
The trampling thunder and the blaze of steel—
The terror and the splendour of the charge?"
"In vain that human thunderbolt was flung—
In vain 'twas shivered." "At the word they sprang
In one wild light of sword and gleaming corse,
And at the terrible beauty of their look
Death stood dismayed. Jove! how the cowards shook
When on them burst that hurricane of horse!"

Sevastopol.

Blaze gun to gun along the roaring steep!
Ram home—ram home! Knee-deep in living mire,
Run like cold Demons thro' the Hell of fire,
And feed the gulphs of flame! We have burned Sleep
And Night! The useless Sun is in the Deep!
Fire on! This hour shall end them, son and sire!
Fire on! The scorching City is a heap!
The bastions reel, the toppling turrets leap!
Advance! The assault like to a sudden sea
Bursts in the thunder of one long wild wave.
Advance! The boiling waters rage and rave,
And the white foam flouts Heaven. High, higher! See
The drowning streets! High, higher! Who can save?
The flood—the flood! A Deluge and a Grave.

We drop from these heroics into the actual camp. Our lively, rattling young Templar writes:—

"Should you ever run your head against the 'Great Asian Mystery,' and have to discourse on the marvellous virtues of the Arab race, set it roundly down, that they are hospitable because they live in tents. Under similar conditions of canvas, John Bull beats them hollow! Such, at least, was the ethnological conviction—the more valuable, as I never travelled in Arabia—which flashed across me on arriving at the — Division. My traps had not come up; I was an idler in the midst of stern work; yet not only did my friend — invite me for that night to share his pavilion (it is 6 feet long, by 3 high, and 2½ broad, but General —, to whom I only carried a letter of introduction, pressed me most kindly to accept a corner of his, and that though one of his Aides-de-camp already divides it with him. While it was yet uncertain whether I should have to close with either of these good-natured offers, dinner was served, and I became a hungry partaker. The appetite inspired by my long drive did not prevent my looking with considerable interest at the novel *entourage* of this my first camp repast. The General's tent differs in no respect from that of the common soldiers. A single wax candle, placed on the ground, lit the interior. Canvas forage-bags, cloaks, and waterproofs spread around,

hid the bare earth; and on them reclined, *more antequo*, the General and his Staff. I alone enjoyed the dignity of a seat, viz., on a portmanteau. No such thing as table, chair, bed, bedding, or couch, was visible. As I looked at these simple arrangements, I could not help thinking, if such was all the comfort enjoyed by a General in the Crimea—what must be the condition of inferior officers? It was not till afterwards that I learnt, that, in these respects, Sir — cannot be persuaded to allow himself, either on the score of his years or of his rank, the smallest advantage over his subalterns. Fortunately, however, for my un-Spartan appetite on the occasion in question, it does happen, that the General, having to feed three lusty Aides, keeps a French *chef*; and this incomparable artist, though he cooks *al fresco*, is said to be capable of doing anything short of transmuting ration-pork and biscuits into *soles au gratin*. A very good dinner was followed by coffee, and by tobacco for the juniors."

Our Templar soon makes himself at home in the tented field,—and proves to authority the advantages of an independent kit over that of "the regulations."—

"The grand comfort, or as they call it here, the 'luxury' of my tent, is one that is independent of its external shape: namely, the lining through one half of it. This is stretched at a distance of about six inches from the outer canvas; and, when closed at both ends, it forms a distinct inner room. The protection it affords against cold, or heat, may be put down at six degrees Fahrenheit. Thus, though my tent is so much less tall than a bell-tent, that its weight, together with that of the linings, is not greater than that of the other, yet the advantage in point of temperature is altogether on the side of the former; and in a land where extremes of heat and cold succeed each other rapidly, this is but another mode of saying, that the advantage in point of healthfulness is so likewise."

Here is a noticeable fact, which we chronicle with the greatest satisfaction:—

"It will convey to you some idea of the admirable order in camp, when I add, that one of my boxes, containing things for which I have no immediate use, is kept outside my tent. Though the wood, at any rate, of which it is composed, would be useful to many a soldier who has to trudge to a distance for fuel, everybody assures me that it is perfectly safe. Indeed pilfering, so far as I can ascertain, is unheard of. Of what other community could the same be said?"

'Non-Combatant' is an acute observer. Here is a curious note:—

"The day in camp begins, for me, when I hear the troops coming back to their tents after morning parade. Persons who have not tried it, might suppose, that the pounding from the fort-guns would act as an earlier *réveil*. But to this the ear becomes habituated almost immediately. I have heard a General of Division say, that, while he sleeps easily enough through almost any amount of cannonading, the faintest report of a musket rouses him at once; for *that* indicates the approach of the enemy."

A fact is noted early in October which may help to account for those stubborn attacks of the Russian infantry with the bayonet at Inkermann which so astounded old campaigners:—

"A Polish deserter, who was taken the other day, said, that Menschikoff had given out, that our triumph at the Alma was entirely due to our superiority in fire-arms; and that we could only be effectually opposed with the bayonet! The story, ridiculous as it sounds, received some colour of probability from what one of our sentries has just seen. He got close enough to Sevastopol to observe a body of infantry practising charging at wooden boards—practising, moreover, *cheering* as they did so!"

—If *this* be the explanation of the bayoneting at Inkermann, it is a feat not likely to be repeated after the terrible disenchantments of that battle.

Our author saw the great conflict of that memorable day,—and as he describes only what he saw, his account will be read with interest

even after the thousand descriptions of those who have painted the scene in the rough.—

"The Round Tower was firing over our heads at the Allied army. The Russian park of artillery, on the other hand, had enough to do with the antagonists before them, who, already (it was not quite two o'clock) were slowly gaining ground. In fact, the only narrow escape I had, was from a shell, which did me the honour to burst within a few yards of me when my ears were, for the first and last time, regaled with the peculiar *hum* which marks the near approach of the flying fragments of those uncomfortable projectiles (I picked up a hot bit as a memento). Still, though we were comparatively safe, I was amused, considering all things, by the politeness of an officer present, who on lighting his cigar from mine, expressed an artistic regret, that he should 'spoil so beautiful an ash!'—At this time, the aspect of the battle, as seen from our position, was as follows. Two large bodies of the Allied troops stood, or rather lay, close before the foremost tents of the Second Division, a little below the long low rounded outline of the hill on which they are pitched, and which, on its furthest side, descends to the Tchernaya. Another mass occupied a place (as it seemed to me) about a hundred yards in advance, and more off to the right, on the very profile of the hill. The whole of this ground, I should tell you, rises gradually, for two or three hundred yards in front of the tents. Crossing the highest portion of the outline, was a fourth body of the Allies. The ground then makes a dip for about four hundred yards, when it makes another gradual rise of the same rounded character, until it reaches an elevation somewhat higher than the hill occupied by the French and British troops. Here I counted six bodies of the enemy. I suppose the two armies were seven or eight hundred yards apart. All parties were pounding away with their artillery, and the wind carried off the smoke, so that we could clearly see the spectacle. About three, the Allied troops gradually advanced, till their foremost park of artillery occupied the bottom of the valley between the two hills. In half an hour more, the Russians were in full retreat towards Sevastopol. I could see them in their long grey coats marching past us with their arms shouldered, and in good order. My sketch of the ground was now completed, the victory won, and I got up and prepared for my long trudge, so as to be in time for dinner on board the —; but I had not walked many paces, when one of our regiments was brought forward past me, to fire at the retreating foe. Stretchers were being carried behind them; and though I had seen these implements often used in carrying the wounded, I confess it gave me a shock to see them borne close behind these soldiers—now walking well and erect, their faces full in my view—in *anticipation*! An anticipation soon realized. Directly they appeared there, the place where I had been lying seemed alive with round shot, throwing up the dust in all directions; while the stretcher-bearers were running here and there—I knew too well for what reason. It did also occur to me (why will thoughts cross one at the wrong times?) that, perhaps, it was lucky for a certain person that these poor fellows did not come up before—that had that happened, he might have presented himself at a particular nook of the Temple with a wooden leg; but with no honours, no pension, to show for it—only sharp shafts of ridicule and—'Que, diable, allait-il faire dans cette galère?' Ah, ah! you have lost that triumph!"

After this we will only give the scene after the battle:—

"The attitudes of the dead were most startling. I think I told you, that I found the Hussars, who were sabred by our Heavy Dragoons at Balaklava, lying flat on the ground. Here, on the contrary (and the same is said to have been the case at the Alma), the dead were strewed about in every imaginable posture. Arms were stretched upwards, as if warding blows, or dealing thrusts. Bodies were half raised—the head bent forward—the nether lip bit in—the eyes open—but for the glassy stare and marble feet, you might have thought them springing at your throat! The suddenness of the stroke had fixed the last movement of volition. Those who had bled to death, lay placidly."

Our poetic illustrators of the war, travel, as we have hinted, beyond the scenes of carnage to the outermost margin of the circle in which the interests of the war are gathered. Here are some excellent suggestions addressed to America:—

America.

Men say, Columbia, we shall hear thy guns.
But in what tongue shall be thy battle-cry?
Not that our sires did love in years gone by,
When all the Pilgrim fathers were little sons
In merrie homes of England! Back, and see
Thy satchelled ancestor! Behold, he runs
To mine, and, clasped, they tread the equal lea
To the same village-school, where side by side
They spell "Our Father." Hard by, the twin-pride
Of that grey hall whose ancient oriel gleams
Thro' yon baronial pines, with looks of light
Our sister-mothers sit beneath one tree.
Meanwhile our Shakspeare wanders past and dreams
His Helena and Hermia. Shall we fight?

Nor force nor fraud shall sunder us! Oh ye
Who north or south, on east or western land,
Native to noble sounds, say truth for truth,
Freedom for freedom, love for love, and God
For God; Oh ye who in eternal youth
Speak with a living and creative blood
This universal English, and do stand
Its breathing book; live worthy of that grand
Heroic utterance—parted, yet a whole,
Far yet unsevered,—children brave and free
Of the great Mother-tongue, and ye shall be
Lords of an empire wide as Shakspeare's soul,
Sublime as Milton's immemorial theme,
And rich as Chaucer's speech, and fair as Spenser's dream.

—In such aspirations we join the singers with our whole souls.

What we have quoted from these books of the week will have shown that here are two genuine additions to our library of the war.

Germany during the Insurrections of 1848.
Nisbet & Co.

HERE is a title which explains nothing, and suggests an inference not warranted by the text. The writer does not describe the 'Insurrections of Germany'; he—or she—merely passes through that country at an eventful time, passes through it rather blindly as appears to us. Insurrection as a subject is scarcely touched, —and Germany is not the sole topic of the book. It begins with France; runs off to Rome and Naples, expatiates long and drearly on "Portia, Cornelia, Pilate's wife and the Ladies of Jerusalem"—probes about the Duke of Wellington, comes back to Ireland and Scotland, devotes a chapter to "English language—Literature—Press—Emigration—and Bunyan"! In the midst of much small talk and weak narration, we get occasionally a glimpse of a famous man,—as, for instance, of M. Humboldt, whom our author sees at Potsdam.—

"There was another King of men at Potsdam—whom to have known and visited at his own apartment, might well constitute an epoch in one's existence; and that apartment, even though it belonged to the Palace, how Spartan in its simplicity! No luxurious sofa, or tempting *fauteuil* to be seen, inviting the octogenarian Humboldt to repose. We found him seated at a small deal table, on a little upright wicker chair, and a volume was open before him, into which we had the curiosity to peep before our visit was ended; for it looked exceedingly like a well-remembered old friend. And sure enough it turned out no other than 'The Edinburgh,' open at a review of the last published volume of the 'Cosmos,' and the margin closely filled with comments, in his own neat small handwriting. It would have been most interesting to hear the Reviewer thus reviewed in turn by the master; but we were discreet, and put down the volume as our host re-entered. Truly I felt this High Priest of modern science to be sublime, somewhat after the fashion of his own Andes, though he thus seemed to live and move like other mortals, and to be sometimes contained in a little wicker chair. Some ruffians had broken into his room on the night of the 18th, but no injury was done; 'they respected my grey hairs, though they had not heard of the Cosmos,' was his own touching observation. That 'one small head' should carry all he knows to fourscore years and beyond, losing

nothing by the long way, of all science has been doing and accumulating over the world, is indeed admirable and astonishing. So, too, was it intensely interesting to behold a man who had listened to Pitt and Sheridan the same night, in our own House of Commons, and to get our *vivâ voce* summary of their speeches! No less strange was it to hear, how he had seen the first introduction of Talleyrand to the Directory—the astute, aristocratic aspirant to power, being dressed *à la romaine*, for the classical and republican fever was then at its culminating point in Paris! He mentioned an interesting anecdote of Metternich, which as that statesman was now 'fallen, fallen, fallen, from his high estate,' it was generous to repeat. Napoleon being exasperated with the tidings of a fresh rising in Germany, threatened he should burn Ratisbon and Munich—'Vous ne ferez pas cela, il y a une histoire!' said the Austrian Minister; pity he did not better remember the same Nemesis in his own subsequent career! So, too, to hear 'this old man eloquent' tell of Franklin, whom he had known, and La Fayette, whom he first met at the table of the Great Frederick here, the young Frenchman fresh from his American campaigns, and the veteran monarch questioning him closely about Washington—then peacefully preparing for heaven at Mount Vernon, and poor unconscious Louis XVI. hunting at Fontainebleau—was altogether most extraordinary: I thought myself in a dream, or that I had 'foregathered' with the shades of the departed in Valhalla."

The above is one of the best passages in the volume,—and shows a certain pictorial faculty which training might lead to excellence.

Insecta Maderensia; being an Account of the Insects of the Islands of the Madeiran Group.
By T. Vernon Wollaston. Van Voorst.

THIS work is not the result of a mere *dilettante* sweeping of the hedges with a muslin net; but a substantial contribution to the science of Entomology, that will live as long as there are men who cultivate the knowledge of this vast department of created beings. Large as this volume is, and numerous as are the species of insects described and figured, the name is somewhat apt to mislead. It does not embrace all insects, but only those popularly called Beetles. The entomologist will thank Mr. Wollaston for concentrating his attention on one group, thus rendering a substantial contribution to science possible, for had he attended to other forms even of insect life his time might have been exhausted without making a single important discovery.

Such an account of the Coleoptera of any district would have been valuable, but all that relates to Madeira has an especial interest. The problem of the geological history of these islands lying midway between the Old and New Worlds, can only be solved by a complete knowledge of the forms of its present inhabitants and their relation to those of other parts of the world. It is to Edward Forbes that the geologist is more especially indebted for this method of ascertaining the relations in the past of the present continents and islands of the earth's surface. These islands in the Atlantic, Madeira, Canary and Azores, are they the remains of a former larger island,—or of a continent stretching westward towards the New World or eastward towards the Old? How is this question to be determined? An examination and comparison of the living beings upon them is the only method. As the result of his inquiries into the forms of living Mollusca, it was one of Edward Forbes's favourite theories, that during the Miocene period a vast continent existed of which these islands are the remains of its highest mountains, which extended north as far as the south of Ireland, and continuously embraced what is now the Azores and the shores of the Mediterranean. This theory, which was at first regarded as the speculation of

a sciolist in science, has been strengthened with every new research, and this work of Mr. Wollaston, with the dredgings of Mr. Mac Andrew in the Azores, were both placed before the Members of the last meeting of the British Association at Liverpool, as fresh proofs of the truth of the theory of the late professor of Natural History.

Without a theory to establish, Mr. Wollaston collected his beetles for the sake of making known the species he found; but on completing his work he tells us, that on comparing them they have a greater affinity with those of Sicily than any other country. He also points out a connexion between the insect forms of Madeira and those of the south-western extremity of our own country and of Ireland, as nearly all the species which are common to Madeira and the British isles were found in those particular regions.

In this work Mr. Wollaston has described 482 species; of these the very large number of 270 are new, including no less than 41 genera. These figures will best indicate to the entomologist the amount and value of Mr. Wollaston's labours. One curious result of his researches is the large number of species which appear to be indigenous to the Madeira islands. Thus 281 species out of the 482 are known only as Madeiran. Another unlooked-for result of Mr. Wollaston's labours is the absence from Madeira of numerous genera, and even families, of Coleoptera, which are looked upon as almost universal. Of the various species inhabiting these islands few have bright colours, and a large number of them are wingless, or are deficient in the powers of flight. Perhaps this latter peculiarity may account for their excessively local character.

Mr. Wollaston has availed himself of the assistance of Mr. Westwood in the illustration of his new genera and species, and few entomological works can boast of such faithful and accurate representations of the forms described.

We must not close our notice of this volume without stating that it is the result of three several visits to the Madeira islands—two winters and one summer having been spent in collecting materials. During the summer expedition the author sojourned for some time in the mountains, taking with him his tent. He speaks with enthusiasm of the beauty of the mountain scenery of Madeira, and of the deliciousness of a tent-life in these commanding positions. As a contrast to the delight he experienced in his scientific researches, he refers to the *ennui* of the majority of those who seek Funchal for the benefit of their health in the absence of any occupation that would withdraw their minds from the maladies under which they suffer. To all such Mr. Wollaston's book will be a treasure as a guide to the localities where they may meet with interesting objects, the search after which seems to have restored his own health, and the description of which here given will gain for him a reputation as an accurate entomologist.

OUR LIBRARY TABLE.

Synopsis of the Edible Fishes at the Cape of Good Hope. By L. Pappe, M.D. (Cape Town, Van de Sand, de Villiers & Tier; London, Algar & Street.)—South-African Ichthyology was first rendered interesting to students of that branch of natural history by the excellent work of Dr. Andrew Smith on 'The Zoology generally of South Africa.' Dr. Pappe's contribution to the same department of study is a brief and modest one; but it is not without its uses. It contains a catalogue of the names, scientific and popular, with some slight account of the edible fishes frequenting Table Bay, False Bay and the waters on the coast of Hottentot's Holland. It is pe-

cular to this district that the fishes of one bay "are rare or absolutely wanting" in the other; while not less than a dozen fishes,—natives of the Mediterranean,—are common in the Cape shores, where scarcely any Indian or South-American species are known. Of one of the fishes,—to be found alike in the Mediterranean and the Cape waters,—the *Leptocephalus Morriissi*,—Dr. Pappe says that, "while in its natural element, it is perfectly transparent, like glass, but soon becomes opaque when brought into contact with fresh water or alcohol." The Doctor professes to treat only of Edible Fishes, but he speaks, at some length, of one that eats, but may not be eaten. This fish has many names, and most of them look as hideous as the creature itself. It is known as the Titraodon Honkenyi Block, or the Blaasopvisch; in more civilized English it is called the Balloon, or Toad-fish. The author draws a graphic picture of this monster; and when he adds, that "a broad, longitudinal, brimstone-coloured band proceeds from each side of the body, from under the lower jaw, towards the tail," this seems to us quite in agreement with the infernal aspect of a fish which is hideous in its own element, and which, "when taken out of the water, becomes inflated to a considerable extent, utters a particular sound, resembling a grunt, and by its sparkling eyes, which then look truly terrific, betrays extreme ferocity." It must have been some such monster, the mere sight of which killed the old Admiral in the ballad. The author states several circumstances in proof of the deadly, poisonous character of this fish; but of the nature of the poison itself nothing has yet been ascertained. Dr. Pappe acknowledges that he knows little touching the freshwater fishes of the colony, and, therefore, says nothing about them. Those fishes,—of Kafirland especially,—must have a very uneasy time of it, for the river courses which are overflowing one day are dry as Araby the next. If there could possibly be such a person as a vicious angler, Kafirria should be the penal Tomos of his exile, for not only are there few, and sometimes no fish in the rivers, but there is not a solitary singing-bird in the land;—and miserable indeed is the disciple of Walton, who, lacking sport in the water, has no song to solace him in the wood.

Nineveh and its Ruins; or, The History of the Great City. By the Rev. Robert Ferguson. (Part-ridge & Oakley).—The story of Nineveh, to which poetry adds its touches of romance, is a story that will bear repetition. The Great City, with its traditions of antique splendour, its ruins hidden for ages by the dust of the wilderness, the achievements of its kings and queens written on alabaster, and the voice of old Prophecies sounding in its desolate chambers;—all this unites to point out an eternal moral, and to adorn an ever-wondrous tale. It is, perhaps, no misfortune that the best subjects attract the most numerous succession of compilers, since that which so many attempt will, in due time, be achieved by some. The Assyrian remains have already found historians and commentators of no ordinary merit, as well as pens to describe them and their archaeology in a more popular style. We cannot, however, include Mr. Ferguson's meagre compilation in the catalogue referred to. It is written altogether in *falsetto*. Mr. Ferguson commits the common error of supposing that to be a favourite with the young it is necessary to write *down* to them; he confounds poverty of style with purity, and thinks that to be natural it is essential to be bald and mean. He begins, "In a very old book, which we call the Bible,"—talks of Semiramis as possessing "that mixture of prudence and vanity which is peculiar to a woman's character,"—and apologizes for a Prophet as follows: "Poor Jonah! his feelings got the better of his judgment." The whole of this 'History of the Great City' is composed in the same affected strain; and the result is, not simplicity, but absurdity. The illustrations—which we think have been used before—and the typography of the book are good; but the text, we must repeat, is common-place and unsatisfactory.

Profiles of Warrington Worthies. Collected and arranged by J. Kendrick, M.D. (Longman & Co.)

—Cromwell once lodged at Warrington. The Aikin family were natives of that town, as were Anne Blackburne (the friend of Linnæus), Joseph Priestley, Gibbon Wakefield, and "stupendous Fitchett." The last-named wrote 'King Alfred, a Poem,' in six octavo volumes, containing more than a quarter of a million of lines. Few know the book, fewer still have read any of it. Fitchett was a remarkable man; but Dr. Kendrick's account of him is incomplete. He began his Epic early in life, spent many unwearying years upon it, and, dying before the work was completed, bequeathed it to an editor, with ample means for its publication. Dr. Drake, of Hadleigh,—not unknown as a critic,—used to remonstrate with him on the endless length to which 'King Alfred' grew; but he went steadily on, devoting his fortune to the acquisition of materials, and his life to the use of them. Biography, politics, topography, antiquities, mythology, manners, and religion were all treated with metrical solemnity, until the author died, leaving Mr. Robert Roscoe, a son of the historian, to finish and edit the poem. Dr. Kendrick's biographical notices are mere paragraphs, while his portraits are, as the title avows, simple profiles, in black ink, admitting of no character or expression.

Students Abroad: their Romance and Real Life. By R. B. Kimball. (Ward & Lock).—A volume in which improbabilities, horrors and absurdities are packed together in what Mr. Carlyle would call "unutterable cram." A lady who fractures her skull,—a youth who is buried under an avalanche,—a creature who sits in the *Morgue*, and stifles the last breath of the drowned,—a man who dies in frenzy,—a corpse in the Boulevard,—another corpse, like the Arabian Hunchback, kneeling against a wall,—various collateral episodes of madness, delirium and mystery,—make up the contents. All this is told in solemn prose, with occasional efforts, equally painful, at humour and tragedy. If such were the romance of student life abroad, it would, indeed, be a flat and unprofitable occupation to follow its vagaries. But the conceptions of Mr. Kimball approach no nearer to romance than they do to reality. The best part of the book is the cover.

Hildred, the Daughter. By Mr. Newton Crossland. (Routledge & Co.).—'Hildred' is an entertaining volume; the characters are carefully drawn, the interest is well sustained, and the moral kept in view. Hildred Layton, a prodigiously moral young lady, on coming of age finds herself in possession of twenty thousand pounds, which she conscientiously abstains from using, having discovered that she is not justly entitled to it; for her father, when a young man, had been intrusted with a large sum of money by a French noble, with the understanding that should he be enabled to escape from Paris when the storm of the Revolution burst, the money was to be returned to him; but troubles broke on him too rapidly,—he was arrested and conducted to the guillotine. Mr. Layton, finding himself in undisturbed possession of the Frenchman's money, settled twenty thousand pounds upon Hildred, his only child, who secretly resolves not to touch the money, but to make every inquiry in the hope of discovering the lost heir. We will not follow her through the difficulties and disappointments of her undertaking:—suffice it to say, that she steadily follows her conscience, regardless of the remarks and sneers of those who look greedily at the property. It is not always that we have a heroine of so decided a character; she possesses sound sense and strict principles,—and of course she has her reward.

Leon; or, Old Paul's Treasure. A Guide to Young Merchantmen seeking Goodly Pearls. By Onesimus, an Elder Brother. (Darton & Co.).—'Leon' is an attempt to show the power and beauty of Truth. The dialogues are abrupt and pointless, and altogether the design is better than the execution. We cannot admire this sort of book for little people. Why should all the good little boys of the tale be despatched in so horrible a manner? Would it not be easier and more pleasant to let the children be happy and cheerful rather than excited and depressed by such distorted pictures of mortality? If juvenile heads were to be guided by

such writers, they would have a sad notion of the pleasantness of religion, and imagine that as soon as they think about Heaven, they must be tossed by mad animals or knocked down by runaway horses like Leon and Paul.

The Monastery and the Mountain Church. A Story Book for Children. By the Author of 'Sunlight through the Mist.' With Illustrations. (Murray).—Here is an interesting little work, showing the persecutions which the reformers of monasteries and convents experienced in attempting to reduce to discipline the careless and unruly. The work is written in a tolerant spirit, and contains many instructive particulars relative to the Church in early times.

The Water Lily. By Harriet Myrtle. With Illustrations by Hablot K. Browne. (Bosworth.)—'The Water Lily' is a simple little story, prettily written; but like the run of children's books, it contains nothing that has not been written and read many times. The naughty children grow good when the little friend dies, in the hope of meeting him afterwards in a better place. It is the old, old story. There are some graceful illustrations, which will doubtless please the exacting little critics in the nursery.

A Popular History of British Mosses. By Robert M. Stark. (Reeve).—To the more accurate observer of nature, the group of minute plants which we call Mosses presents a variety of form, adaptation and function as great as that which is afforded by the more conspicuous families of the vegetable kingdom. Nor is their interest confined to the forms they assume at the present period of the world's history; for, like many other small creations on the earth's surface, they are the last representatives of a giant race. The coals we burn are the *débris* of forests of gigantic mosses, whose structure and forms can only be understood by reference to the existing diminutive species. To the geologist, therefore, as well as the botanist, the mosses present an interesting field of study. Till the appearance of the present volume, there has been no popular introduction to the study of these little plants. It has thus far supplied a desideratum,—and we are glad to be able to say that it has been done well. This work is confined to the British mosses; but is illustrated with twenty coloured plates, containing representations of all the typical species, whilst the descriptions of the remaining species will, with a little study, enable the neophyte to recognize any specimen he may happen to have in his hand. This work is a worthy companion to the 'Popular History of British Ferns,'—and must rank amongst the best of the series to which it belongs.

The Bad Things which have been said about Women.—[*Le Mal, &c.*] By Émile Deschanel. (Brussels, Kiessling, Schneé & Co.; London, Ellis).—The scene of 'Vilette,' the last novel by the Author of 'Jane Eyre,' must be recognized by every one as Brussels. The readers of that strange tale, too, will not have forgotten its hero *M. Paul Emanuel*, the choleric professor at *Madame Beck's* school for girls: who, so often as he was affronted, used to discharge every sort of vituperative and sarcastic epithet of which woman had ever been the object, against his scholars. Of that imaginary character we have been reminded by this real little book,—a volume of the 'Diamond Library,' and by the Editor's preface which opens it. The latter sets forth that every one who is conversant with Brussels must know M. Émile Deschanel as an accomplished, deeply instructed and eloquent teacher:—who can ornament every subject on which he lectures, be it ever so harsh, be it ever so graceful,—who can give a new savour to an old subject, whether the same be sweet or bitter—subjoining this book as a specimen of the powers of illustration which he can bring to bear on the least promising topics. Can M. Deschanel be the original of *M. Paul* in the novel? Really such a bitter little book as this warrants the question. We hand it over to be dealt with by Lady Morgan, and Miss Strickland, by Mrs. Jameson, and Miss Kavanagh, and Mrs. Ellis, all of whom have tried to show how deeply "woman's master" is indebted to woman for all that is best in him. We suggest to the rapping ladies that here is a fine

opportunity for calling up in confusion of this collector of specimens of misogyny—the shade of Henry *Fräuen-lob*, the *minnesinger*, from his tomb in Mayence,—or the more modern champion, Sir Walter, if only for the sake of his one saying: “*Like all rogues, he was a great calumniator of the fair sex.*” But may we not be running on too fast? Will the gifted and strong-minded women rise up and unite in the defence of “the woman-kind”? M. Deschanel has hardly in his ‘Museum of Monstrosities’ sufficiently brought out the attacks made by women on woman. Of this we are reminded by a note which greatly amused us, the other day, in Madame Dudevant’s ‘History.’ There the liberal French lady coolly states that women, be they ever so pious and high-minded, will, generally, cheat at cards, and be dishonest in the settlement of their money affairs! Countless other dry testimonials and confessions of similar quality occur to us. Each *Britomart* may possibly singly mail and helm herself for the adventure of teaching this slanderous M. Deschanel better manners; but he has nothing to fear from Amazonian unity directed against his breviary of accusation.

The History of the Chartist Movement, from the Commencement down to the Present Time. By R. G. Gammage. (Holoake.)—It is well to find working men writing history for themselves,—especially the history of their own acts, purposes, and desires, which are too commonly viewed *de haut en bas*. Mr. Gammage continues in the same frank and moderate style as before, pausing at intervals to describe the characters of men who have held leaderships in “the Chartist Movement.” He has now brought his relation as far as the period of enormous torchlight assemblages; and we cannot but allow that his account is the only one that has been written in a temperate and truthful spirit. Some of the criticisms on popular oratory are exceedingly just, and display a faculty of appreciation somewhat remarkable in a writer accustomed to hear the fierce, ungoverned, and ungraced eloquence of men who speak from conviction and from passion, without the modulations of art or the knowledge that enables an orator to adorn his reasoning with felicitous images and recondite allusions. Mr. Gammage tasks himself less with apologies than with explanations; he invites us to learn what “the Chartist Movement” is, and is content to draw few inferences.

Studies from History. Vol. I. *Richard I. and the Third Crusade; Mohammed II., and the Fall of the Greek Empire.* By the Rev. W. Rule. (Mason).—A merit in this production is, that it has not been compiled from the works of compilers. Wherever it is practicable, Mr. Rule chooses to refer to an original authority,—a circumstance which gives distinctness to his views and originality to his narrative. A faculty of analysis is displayed in the discussion of controverted points that entitles Mr. Rule to the praise of being a discriminating as well as a conscientious student of history.

Account of Andrew Yarranton, the Founder of English Political Economy. By Patrick Dove. (Edinburgh, Johnstone & Hunter).—Without at once electing Andrew Yarranton to be founder and first president of our English school of political economy, we may allow, with Mr. Dove, that he was a remarkable person. By trade he was at first a linen-draper, but, he says, not very modestly, “the shop being too narrow and short for my large mind, I took leave of my master, but said nothing.” He lived a “country life” for some years, served as a soldier in active warfare, and became by turns an ironmaster, a surveyor of rivers, a writer on husbandry, and a private envoy to different countries of Europe to examine the progress of trade and manufactures. He then proposed a system of economy by which England might extend her commerce, improve her industry, defend herself, “and beat the Dutch without fighting.” His ideas will find less favour in our generation when we add, that he was a devout “protectionist,” who believed that to promote domestic prosperity it was wise “to tax all manufactures coming from abroad.” The career and the opinions of this speculator of the seventeenth century are chronicled

by Mr. Dove in a pleasing volume, intended as an Appendix to his ‘Elements of Political Science,’ which we have already noticed.

Essays on the Characteristics of a Superior Popular Literature. By W. Bathgate. (Ward & Co.).—A whole essay clipped into epigrams is like an arrow cut up into “points.” It is even more tiresome than a speech which is all peroration. Mr. Bathgate sins in this respect. With sensible views, and a spirit of warm sympathy with the desires and necessities of his fellow beings, he writes in a style too artificial to be pleasant. We notice on his part a continual effort to be a sayer of remarkable sayings—a search for apophthegmatic definitions and well-poised antitheses—in short, a want of ease, which arises more from unnecessary labour than from natural incapacity. The views here promulgated, on the characteristics essential to a superior popular literature, are too formal to have much chance of acceptance; yet, in some of them, there is evinced a right estimate of contemporary opinions and tendencies. It had been well for the author and for his readers had the manner of the book been as judicious as the matter.

The Works of Publius Virgilius Maro. From the Text of Heyne and Wagner; with a Biographical Memoir, by the Rev. H. Thompson, M.A. Illustrated with Engravings from the most authentic Sources. (Griffin & Co.).—On the desirableness of illustrated editions of the ancient classics we have more than once expressed a decided opinion; and we are glad to see it practically recognized in the present publication, which contains upwards of two hundred illustrations, founded on good authority, though not in the highest style of execution. The text is good, if not the best that could have been chosen; and the biographical memoir gives a correct delineation of the life, character, and works of the Mantuan bard.

The sixth volume of Dr. Smith’s *Gibbon* and the tenth volume of Mr. Bell’s *Hume and Smollett* have appeared. We have before us a new edition of Murray’s *Official Handbook*, carefully revised and brought down to recent dates,—a new edition of *Pepys’s Diary and Correspondence*, in a cheap form and with a good index,—reprints of soldiers’ letters from the Crimea under the title of *The War; or, Voices from the Ranks*,—of *Literary Papers*, by the late Prof. E. Forbes, selected from his writings in the *Literary Gazette*,—a second series of *Fly Leaves*,—a volume of *Head and Heart*, which appears to be a magazine addressed to the young,—and a new edition of *Webster’s Royal Red Book*.—*Ruth*, by the Author of ‘Mary Barton,’ has been added to the ‘Select Library of Fiction,’—Captain Mayne Reid’s *Hunter’s Feast* to the ‘Parlour Library,’—and Mr. Fenimore Cooper’s *Wyandotté* to ‘Bentley’s Standard Novels.’—Among books which have attained the honours of a second edition, we have Mr. Thackeray’s *Rose and Ring*,—*Balder*, with an angry and explanatory Preface,—and *Tales from the German*.—Among third editions we have Col. Munday’s *Antipodes* in one volume,—and Dr. Aiton’s *Lands of the Messiah, Mohammed and the Pope*.—Dr. Snow *On the Mode of Communication of Cholera* has reached a new edition, and is “much enlarged.”—Mr. Willmott’s pleasant essay on the *Pleasures, Objects and Advantages of Literature* appears in a cheap form. Mr. Bentley has issued, as the first volume of a new library, the beginning of Mr. Jesse’s *Court of England under the Stuarts*.

LIST OF NEW BOOKS.

Anne, Duchess of Brittany, *Memoirs of*, by Miss Costello, 10s. 6d.
Aston’s Income-Tax Tables at 1s. 2d. in the Pound, 2nd edit. 1s.
Bode’s (J. E.) Ballads from Herodotus, 2nd edit. 7s. 6d.
Burton’s (J. H.) Manual of Law of Scotland, 9 vols. reduced to 10s.
Cassell’s Latin Dictionary, by Dr. Beard and C. Beard, B.A. 9s. 6d.
Fitzalan’s (F.) Art of Travel, illust. cr. 8vo. 6s. 6d.
Cottager’s Monthly Visitor, for 1854, 12mo. 4s. 6d.
Davidson’s Treatise on Biblical Criticism, new edit. 8vo. 18s. 6d.
English Flower Garden, 1 vol. cr. 4to. 21s. 6d.
Fénelon’s *Télémaque* (French), by Wanostrucht, new edit. 4s. 6d.
Fitzalan’s (F.) Art of Travel, new edit. 18s. 6d.
Gardner’s (Rev. J.) Christian Cyclopædia, imp. 8vo. 15s. 6d.
Gordon’s (Rev. J.) Christ as made known to the Ancient Church, Vols. 3 and 4, 8vo. 21s. 6d.
Hilton’s Relations of Certain Portions of the Cranium, 6s. 6d.
Hints on Shooting, &c., Experiences of Christopher Idle, Esq. 5s.
Horses and Hounds, by Scrutator, cr. 8vo. 5s. half-bd.
Household Narrative, for 1854, royal 8vo. 3s. 6d.
Illustrated Magazine of Art, Vol. 3, imp. 8vo. 8s. 6d.
Island Empire, by Author of ‘Blondelle,’ 8vo. 12s. 6d.
Jones’s (W. H.) *Blanche de Bourbon*, a Poem, 2nd edit. 6s. 6d.
Ken’s (Bishop) Approach to the Holy Altar, 3rd edit. 12mo. 1s. 6d.

Ken’s (Bishop) Exposition of the Apostles’ Creed, new edit. 1s. 6d.
Lilly Douglas, new edit. 18mo. 1s. 6d.
London Catalogue of Periodicals, &c., for 1855, royal 8vo. 1s. 6d.
Lucy, or, the Housemaid, 12mo. 2s. 6d.
Maclean’s (Rev. A. J.) Sermons on Christian Life, 8vo. 10s. 6d. cl.
Melancton’s Bugle of the Black Sea, 6s. 1s. 6d. bds.
Montgomery’s Illustrations of Law of Kindness, new edit. 2s. 6d.
Mysteries of the Court of London, by Reynolds, Vol. 7, 6s. 6d. cl.
Paged’s Hungary and Transylvania, new edit. 2 vols. 18s. 6d.
Phillips’s Story of Treasury of Rampsinulit, illust. 4to. 1s. 6d.
Pulpit, Vol. 66, 8vo. 7s. 6d. cl.
Railway Lib. ‘Ainsworth’s Tower of London,’ 2s. 6d. bds.
Royal Blue Book, January, 1855, 18mo. 5s. 6d.
Schoolcraft’s Exploratory Expedition to the Mississippi, 8vo. 10s.
Shaw’s Union Officers’ Manual, for 1855, 12mo. 4s. 6d.
Simon’s Scientific Certainties of Planetary Life, 6s. 5s. cl.
Snow (Dr.) On Mode of Communication of Cholera, 2nd edit. 7s. 6d. cl.
Stories, by Author of ‘Pierre and his Family,’ new edit. 2s. 6d. cl.
Student’s Walk, new edit. 18mo. 1s. 6d.
Symon’s (E. W.) Merchant Shipping Act, 1854, 12mo. 6s. 6d.
Useful Lib. ‘White’s Landmarks of History of England,’ 1s. 6d.

MISS MITFORD.

AFTER a long period of decline and helpless suffering, cheerfully borne, the Author of ‘Our Village’ died at Swallowfield Cottage, near Reading, on Wednesday last, aged—as a memorandum furnished by herself some years ago assures us—sixty-six years.

She was born in 1789, at Alresford, in Hampshire. Her mother was an heiress and the daughter of Dr. Russell of Ashe, in Hampshire—a man of scholarship and letters. Her father—belonging to the Mitfords of Northumberland—was, as her own ‘Reminiscences’ have told us, a sanguine, cheerful and speculative man—who tried physic, played at whist, spent every one’s money, and something more, and made every living creature about him love him, lend to him and forgive him. To this love and to his extravagance his daughter’s life was sacrificed. Every fortune that came in his way—including a 20,000*l.* prize, won in the lottery—was wasted—gaily and plausibly—by Dr. Mitford; and while yet a girl, with all the impulses of a poetess, but with all the reserve of an old-fashioned gentlewoman, strong within her, his daughter was placed in the position of one who had to “stave off” want and sorrow from the parent to whom she was devoted, by turning her choice and peculiar gifts to account in authorship. Educated in a London boarding-school—which seems to have had the peculiar gift of “bringing out” poetesses—Miss Mitford first presented herself to the public in three volumes of poetry,—one a South-Sea romance, after the fashion of Scott. It was by chance that she afterwards fell on the veins of country life, scenery, and manners, on the one hand,—and on the other, of high tragic passion and action which ‘Our Village’ and her plays in verse severally represent. The story of these has been told too frequently and too minutely by herself in late publications which have passed through our hands for it to be necessary to dwell more minutely on them now, or to enumerate the works that made a labourer’s cottage with a duchess’s “flower garden,” three miles from Reading, a place of pilgrimage to some of the highest and most accomplished persons in Europe. But we must add, that Miss Mitford’s works did not represent all her gifts, produced as they were under sharp pressure, and at moments when it was fitter that the body of a delicate woman should have been at rest rather than that her fancy should have been goaded into exertion. Her letters were charming: her conversation was shrewd, racy and elegant—full of pertinence in its allusions; full of anecdote in its recollections. She was a faithful and cheering friend to those she loved. She bore up against the trials of a hard and ill-understood life with a sweetness and vivacity such as could have made strangers imagine that there was nothing to bear. She was well read in old English and in French literature. Not long after her father’s death, her own health, which had been shaken by her dutiful attendance on him, began to fail; and the illness which carried her away was slow, painful, and dispiriting. But her sweetness of temper and her brightness of mind never failed her to the last; since, only a few hours before the news of her decease reached her friends, they had received from her greeting and tokens in her own handwriting,—showing not merely that the old kind heart was not soured by suffering, but that her sympathies had not been contracted by narrow fortunes, age, and pain.

There are few of whom surviving friends will

long think so affectionately and so cheerfully as of Mary Russell Mitford. Her name has an honoured place in the library of healthy and real English literature.

THE DUNCIAD.

A question of some literary interest has been for months under discussion in *Notes and Queries*, and, as the Editor of that journal has now pronounced judgment, our readers may like to hear the result.

There was prefixed to the very first known edition of 'The Dunciad' an introduction, called 'The Publisher to the Reader.' This soon changed its character, and became in what was, or what affected to be, the author's first authorized edition—the edition with Proem, Prolegomena, Notes variorum, and so forth—a 'Preface prefixed to the five imperfect Editions of the Dunciad,' printed at Dublin and London, in Octavo & Duod.—and in progress of time the date '1727' was added to this description, leaving the reader to infer that the five imperfect editions were published in that year. This 'Preface' some persons have read in simple good faith, trusting in and believing all it told them; while others have maintained that the whole story of the five editions was a mere mystification, and no more to be believed than the account of the ancestry of Lemuel Gulliver and of the monuments in Banbury Churchyard. Each party endeavoured to support his own views by incidental authorities:—passages out of Pope's letters—the letters of his correspondents—title-pages and notes—were cited; the result of which was confusion worse confounded, title-pages contradicting notes, and Swift shaking faith in Pope. At this point the Editor of *Notes and Queries* did us the honour to appeal publicly to the writer of the articles on Pope which appeared in the *Athenæum* [Nos. 1393, 4 and 5] for an opinion. The writer answered to the call, and turned out to be one of the unbelievers. He had copies, some 'Dublin printed London reprinted,' others 'London printed Dublin reprinted,'—he had examined others—but had never met with one printed before 1728. From the letters of Swift and Pope and others—from Swift's Verses addressed to Pope, and avowedly 'composed while he was writing 'The Dunciad,' 1727,'—and from other direct and incidental circumstances, he gave it as his opinion that 'The Dunciad' was written while Swift was on a visit to Pope in the autumn of 1727, and first published by A. Dodd—'this day published,' as stated in the advertisement—in May 1728.

Under these circumstances, the Editor of *Notes and Queries* undertook to examine all copies that might be sent to him, to compare and pronounce judgment. Copies, we have heard, came to him, in numbers numberless, and, we believe, Dublin and London were hunted over and through to add to their number. Not one appeared to have been printed in 1727—not one before the Dodd, to which the writer in the *Athenæum* had referred—and the Editor has now given it as his opinion, that the edition of A. Dodd was the first published edition. Of that edition, the Editor of *Notes and Queries* reports that there were three issues, and he has shown how each may be distinguished from the others. That all three were actually published, that is—sold to the public—is a doubtful question with us. We think it probable that the impression on octavo paper, of which there is a copy in the British Museum, was worked off for Swift, Arbuthnot and others of the Scriblerus Club to write notes and suggestions on. The Editor of *Notes and Queries* is further of opinion that the first Dublin edition—Faulkner's—was reprinted from a copy of this London edition; and many circumstances lead us to believe that all the editions which preceded what was subsequently called 'the first perfect edition,'—the editions by Dodd and Dod and Dob—editions with the owl and editions with the ass frontispiece—the spurious or 'imperfect' editions as Pope called them—were just as genuine as any edition subsequently published, and just as perfect as Pope permitted them to be. We find a confirmation of this conjecture in the fact, brought to light by our contemporary, that the

first of the so-called 'imperfect,' or unauthorized editions, was secured by registration at Stationers' Hall. This registration was not in the name of Dodd the bookseller, but of 'James Bettenham.' Bettenham was a printer, and, no doubt, the printer of this 'imperfect' edition—married to the half sister of Bowyer the printer:—so that we have Pope's 'Homer,' and Pope's 'Miscellanies'—a contemporary and acknowledged work of Pope's—printed by Bowyer and the unacknowledged 'imperfect' works, to be afterwards denounced as piratical, printed by Bowyer's brother-in-law, James Bettenham, and the copyright secured to him, and, no doubt, through him to the author. Mr. Cunningham tells us ('John-son's Lives,' vol. 3, p. 57,) that 'The Dunciad' was registered by Lawton Gilliver on the 12th of April 1729; but Mr. Cunningham had overlooked this prior registration, and the registration by Gilliver only proves the compliant spirit of Bettenham, and that he acted under orders. Mr. Cunningham has also overlooked a subsequent and a very curious registration. Pope, or rather Pope's representative, a printer unknown, obtained an injunction 'against the printer (also unknown) who had pirated' 'The Dunciad'; but, as we learn from a letter of Arbuthnot's, the injunction was dissolved 'because the printer could not prove any property, nor did the author appear.' To meet this difficulty—to secure the copyright without compelling the author to appear—there was a transfer of the copyright to parties whom our readers will be startled to find figuring in such a transaction. We know no more at present than can be collected from the following entry at Stationers' Hall,—except that the facts throw a light on a passage in one of Pope's letters which till now we could not understand.—

"Nov. 21, 1729. The author of a book entitled *The Dunciad, an Heroic Poem*, hath by writing under his hand and seal assigned unto the Right Honourable Richard Earl of Burlington and Corke, the Right Honourable Edward Earl of Oxford and Earl Mortimer, and the Right Honourable Allen Lord Bathurst, their Executors, Administrators, and Assignes, the said Poem and the Copy thereof. And the said Earl of Burlington, Earl of Oxford, and Lord Bathurst, by writing under their hands and seals, have assigned unto Lawton Gilliver, his Executors, Administrators, and Assignes, the said book and copy of the sole right and liberty of printing the same, and also the Prolegomena of Scriblerus.

(Signed) LAWTON GILLIVER."

The proceedings on this occasion, as our readers will have observed, were similar to those followed by Pope in respect to what he called the piratical editions of his 'Letters' [see *Athen.* 1393],—and some of the parties employed were, we suspect, the same.

EXPEDITION TO CENTRAL AFRICA.

ACCOUNTS from Dr. Vogel of his proceedings subsequent to the 20th of February and up to the beginning of July last have at last arrived. On the former day the last of his more voluminous communications was despatched by him, and scarcely had he made up his letters and was about to write a despatch to Col. Herman at Tripoli when he was suddenly seized with a very severe attack of the yellow fever (or "black vomiting" as it is also called), which at once prostrated him and brought him to the border of the grave. For ten days he lay unconscious and helpless, his companions expecting to see him die every moment. Owing to their want of medicinal knowledge, no medicines or medical aid was given to the traveller. Happily, Dr. Vogel's constitution, not otherwise a strong one, but seemingly not ill adapted for these dangerous climes, rallied, the delirium ceased after ten days, and when he became conscious, yellow spots on his arms still showed him the great danger he had just escaped. Calomel and Peruvian bark afforded him relief, and afterwards, in recurring attacks of the fever, the cold-water cure proved very effective;—enveloping himself in wet sheets of cloth, which he changed whenever they became warm, the fever generally disappeared in two hours. Thus, in another ten days he had gained strength enough to sit up erect and to walk a few paces, and on the 27th of March he had so far recovered as to be able to accompany

the Sheikh of Bornu on a great slave-hunting expedition to the south-east of Kuka.

On this occasion Dr. Vogel penetrated as far south as latitude 9° 30' north, or some thirty miles further than Drs. Barth and Overweg, who had accompanied the Sheikh of Bornu on a similar razzia in nearly the same direction two years previously. The army consisted of 22,000 men and horse, with a train of 3,000 camels, 5,000 oxen, and 15,000 camel and oxen drivers, and was said to be the most numerous army brought together in Bornu since the time of the Sheikh El Kanemy. This immense host, bent on murder and robbery, moved slowly in a S.S.E. direction towards the country of the unfortunate Musgo (or Musgu) and Tubori (or Tufuri), who have for some time past been the objects of these Bornuese marauding expeditions. The northern position of the Musgo country, called Adishen by Dr. Barth, and situated between 11° and 10° 40' north latitude, has been subjugated, and is at present allied with Bornu; but beyond these latitudes, to the south, all the country and its inhabitants were visited by the horrible proceedings of these neighbours. The inhabitants retreated southwards as their foe advanced, taking everything with them, nothing but ghafuly and tobacco being found in the deserted villages. It was only in about 10° north latitude and 14° 35' east longitude, that the army came up with some of the Musgos and their numerous herds of cattle. Here, also, it was that Dr. Vogel saw spread out before him an immense lake stretching to the south as far as the eye could reach, and which he calls the Lake of Tubori.

Behind this lake and its marshy banks the Musgos had halted, believing themselves secure in this position; but to their amazement they soon saw the Sheikh's cavalry cross the lake at a narrow part, where it was only three-quarters of a mile broad and about six feet deep. A great number of the horses and riders perished in the attempt; but those who succeeded in gaining the opposite shores captured about 1,500 slaves, all women and children under twelve years of age, as well as about 2,000 head of cattle. The men were not taken as slaves, but at once killed; a few being brought to the encampment alive, only to die a most cruel and horrible death. No great value is set upon the Musgo women as slaves, owing to their being horribly disfigured by a round piece of wood, one and a half inch in diameter, which they wear in both their lips. One of these poor creatures may, therefore be bought for about 10*l.*, and a child may be had for 2*l.* to 6*l.*, according to its age.

From here the Bornuese marched eastward to the river Shary, devastating the country and villages wherever they went. After following the course of that river for two days, they crossed it at a comparatively shallow place, whereby they lost a great number of horses. Having reached the eastern side of the river, they captured, within a few hours, at least 2,500 slaves of the Musgos, who also live there, as well as upwards of 4,000 head of cattle. Thirty-six men were also brought into the camp; and in the most revolting way the Bornuese with their blunt knives cut off one arm at the elbow and one leg at the knee of each of these captives, who thus horribly maimed gradually bled to death. But this was not the worst torture inflicted on the unfortunate captives. The Musgos living in an entirely naked state, are greatly affected by the rain and cool weather; their huts being also well built to afford them sufficient shelter during the rainy season. The rains which commenced while the expedition began their return, namely, in the beginning of May, were of the most terrific description: every evening they were ushered in with thunder-storms and whirlwinds, or rather hurricanes, and they came down in torrents, such, says Dr. Vogel, as he had never witnessed before or had any conception of. The captives lay huddled together in the camp—which, in those alluvial plains, was soon inundated and turned into a great pool—without any shelter or covering whatever, shivering with cold and suffering dreadfully. The consequence was, that dysentery and small-pox soon broke out among them in a fearful degree, and out of 4,000 slaves not quite 500

reached Kuka,—the rest having thus miserably perished on the road.

When those diseases appeared in the camp, Dr. Vogel, who began to suffer, having for three weeks never had his clothes dry, nor been able to procure proper and nourishing food, hastened on to Kuka in advance of the army, and safely arrived at that place.

The results of this journey of Dr. Vogel are extremely interesting; for, in addition to his astronomical and botanical surveys, which may be said to constitute his professional labours, nothing of any interest in every branch of natural science seems to escape his attention, being highly gifted with the powers of close observation. Perhaps the most important fact resulting from this journey is the extremely small elevation of the whole region traversed by Dr. Vogel, and extending upwards of 200 geographical miles S.S.E. from Kuka. Drs. Barth and Overweg, indeed, had previously in unmistakable terms described that region as a great level plain, but absolute measurements of its elevation above the sea were hitherto wanting. This great central plain of Inner Africa, then, presents nowhere as far as $9\frac{1}{2}^{\circ}$ north latitude (a few isolated small granitic cones excepted) an elevation exceeding 950 feet. Dr. Vogel says, that in about 11° north lat., 120 miles from Kuka, he found, at a depth of 20 feet under the surface of the ground, the same layer, consisting of limestone and freshwater shells, which he met with at Kuka 6 feet under the ground; and he suggests that the whole region extending thus for upwards of 100 miles S.S.E. from Kuka, was at one time occupied by Lake Tsad, when its limits extended greatly beyond its present ones. But whether this assumption be correct or not, the well-ascertained fact as to the slight elevation of that region, together with the results of the previous hypsometrical observations of Dr. Vogel and Dr. Overweg, as well as of the discoveries and acute estimates of Dr. Barth relating to altitudes, are well worthy consideration, as they completely upset our previous notions of African geography. It is well known that all our best authorities represent the Great Desert of Sahara, and nearly the whole of Northern Africa, as one vast plain, if not a dead level, at least one of very little elevation; whereas, immediately to the south of Lake Tsad, the existence of mountain ranges, alpine groups, highlands, and mighty table-lands of many thousand feet elevation was asserted and taught us as well-established facts. Now, from the observations made by the members of the Expedition to Central Africa, this is found to be quite the reverse, and both features may be truly said to have changed places,—an extensive table-land from 1,000 to 2,000 feet average elevation occupying the Sahara; whereas, on the other hand, the extensive basin of Lake Tsad and the river Shary forms a great interior depression, which attains its minimum elevation in the Lake with 850 feet. On every side the basin of Lake Tsad is fringed with more or less elevated tracts which separate it from the other hydrographical systems, as, for instance, those of the Nile and the Kowara. These new facts of the relative elevation of Inner Africa also explain to us many features connected with the physical configuration, the climate, botany, and zoology of the regions they refer to.

The countries round Lake Tsad form an immense alluvial plain. Dr. Vogel, after leaving the oasis of Agbadem, situated upwards of 250 geographical miles north from Kuka, did not see a single rock or stone till he came to Waza, which lies upwards of 100 miles S.S.E. of Kuka; thus leaving an alluvial tract between the two points of upwards of 350 geographical miles in the heart of Africa. At Waza an isolated group of granitic cones rises almost perpendicularly out of the alluvial plain to the height of 400 feet above their basis.

As to the hydrography of this region, Dr. Vogel had the opportunity to trace the Shary, its main stream, for a considerable distance. It was found by him in about 10° north latitude, about 2,000 feet wide, and, at an average, 15 feet deep; it being then at the commencement of the rainy season. Here and there sand-banks extended across the river, leaving a depth of only six to eight

feet. It ran with a current of four geographical miles per hour. From traces found by Dr. Vogel on its steep banks, he estimates it to rise to double its height (viz. thirty feet depth) in the middle of the rainy season, and from the admeasurements made by him, this large river discharges no less than 140,000 cubic feet per second into Lake Tsad during that period of the year. Between the latitudes of 10° and 11° the natives call the river Arreh,—with the Bornese it bearing, in general, the name of the “river of Loggeneh.”

The Lake of Tubori, already mentioned in the above, stretches from 10° north latitude and 14° $35'$ east longitude, in a diversion from north to south, to beyond the ninth parallel; in its wedge-like form, its width and depth increasing southwards; so that in latitude 9° $30'$ north, it is four miles wide, comprising numerous islands of an elongated form, densely peopled by Musgos and Tuboris. At its northern extremity, which is surrounded by large marshes, its depth is five or six feet, but in latitude 9° $30'$ north, it is twenty feet. The length from north to south, Dr. Vogel believes to be no less than sixty to eighty geographical miles. Neither Dr. Barth nor Dr. Overweg has, so far as we are aware, alluded to this immense lake, though the country of the Tufuri (identical with Tubori) is shown in Barth's Map. We think it, therefore, not unlikely that this great expanse of comparatively shallow water is of a periodical nature; being enlarged, if not even caused, by the floods of the rainy season, like many other African lakes, Lake Tsad itself included. We know, besides, from those travellers, that the whole of that country is inundated yearly to a large extent. Dr. Vogel found the western banks of Lake Tubori to be lined by a granitic range of slight elevation, the basis on which they stand being from 940 to 980 feet above the level of the ocean.

The country of the Tubori, or Tufuri, lies between the parallels of 9° and 10° , and between the meridian of 14° and 15° east longitude,* and is a rich, fertile country, and well cultivated. For four or five hours, the Bornese army at times marched through uninterrupted fields of ghafu. Tobacco is also extensively cultivated, of which the natives seem very fond, especially the women, they being rarely seen without smoking a short pipe cleverly made of clay and straw. A quantity of fifty or sixty pounds of tobacco was commonly found in the huts of the natives. Extensive forests surround the Lake of Tubori, and consist chiefly of the Deleb palm, as it is called in Nubia. It is a magnificent tree, its crown not unlike that of the Doom palm, but larger, and the leaves of a bright green. The trunk is smooth; the fruit is 8 to 9 inches long by 6 to 7 inches thick, weighs about four or five pounds, is egg-shaped, of a deep yellow colour, and its juice reminds strongly of the pineapple in its taste and odour. The height of these trees does not, generally, exceed 40 feet.

The whole dress of the Tuboris, both male and female, consists of a narrow strip of leather bound round their loins, on which the women fasten a dense palm-branch, which however is not worn to cover their front, but behind. The men are badly provided with weapons, they being generally armed only with a sharply-pointed stick and a club, rarely with a lance. Some possess horses, which are of a small growth, and which they ride without a saddle. A very singular custom was noticed by Dr. Vogel, as exhibited by the Tubori horsemen: when they go to battle, they are in the habit of scratching or cutting the skin of their legs, in order that the blood thus drawn would make them sit on the horse's back all the firmer.

The habitations of the Tuboris are of a rounded shape, covered with a very dense and well-made roof of straw, and surrounded by a mud wall about 5 feet high. Four or five huts generally stand together, surrounded by an open space hedged in with thorn-bushes, and serving for the keeping of stores of corn, straw, wood and other things. Every man keeps from four to five wives, and pos-

sesses a corresponding number of children; when provisions become scarce, he sells his boys into slavery. The food of the Tuboris consists chiefly of ghafu and fishes; they do not kill their cattle, and only eat what has died of disease or otherwise; swine are a dainty to them, as well as frogs and other reptiles. It may here be mentioned, that Dr. Vogel met with the common European hedgehog in latitude 10° north. In addition to despatches and maps on a large scale addressed to H. M. Foreign Office, Dr. Vogel has also sent, on this occasion, geological and botanical collections addressed to Sir Roderick Murchison, Sir W. J. Hooker, and Dr. Robert Brown.

As to Dr. Vogel's plans of his further proceedings, he intended leaving Kuka before the end of July last for Adamaoua, hoping to fall in with the Chadda Expedition, afterwards returning by way of Yakoba. By the end of the year he proposed starting for Waday; thence to try to penetrate towards the Indian Ocean; and failing in this, to return to Europe about the end of the present year, *via* Darfur, Kordofan and Egypt. It will be the wish of every person interested in these expeditions, that Dr. Vogel may choose the most speedy way of return rather than to endanger his life by long-protracted travel and exertions, like his unfortunate predecessors.

Dr. Vogel's communication respecting the rumour of Dr. Barth's death having been of a somewhat later date, namely, of the 18th of July, the present letters contain nothing fresh respecting that melancholy occurrence. The rumour he seems to have received from the nephew of Ali Lagran, a Bornese, and chief servant to Dr. Barth. This personage is said to have sent two messengers from Kano to his nephew, who resides at Kuka; but afterwards the former was said to have disappeared from Kano, and gone no one knew where. An ambassador of the Sultan of Sakatu to the Sheikh of Bornu, whom Dr. Vogel saw himself, had also heard of Dr. Barth's death, but nothing was known that can be considered as conclusive.

AUGUSTUS PETERMANN.

OUR WEEKLY GOSSIP.

Mr. William Howitt, who has just returned from Australia, sends us some explanations on the actual working of the Copyright Law in the several colonies of that great continent.—

“The Hermitage, Jan. 8.

“You have been very properly drawing the public attention to the introduction of American reprints of English books into our Colonies. In your first notice you mentioned the new law at the Cape legalizing their introduction there, and observed, that this example would be, no doubt, speedily followed by Canada, the West Indies and Australia. Since then, Mr. William Chambers has pointed out to you the general diffusion of such reprints in Canada,—and it is only due to the public that it should be informed of what is the state of this question in Australia. Australia has not waited to imitate the Cape, but has led the way, and has probably greatly influenced it by its example. Everywhere that I have been, in Victoria, New South Wales and Van Diemen's Land, American reprints abound. I have never seen or heard of any attempt on the part of Custom-House officers to prevent their introduction. No revenue officer ever asked me at any port to show my luggage; and I have seen scores of Americans come in and pass with the same impunity. In fact, all these Colonies consider it their interest to admit freely as many cheap books as possible; and when inclined to wink, who or what shall make them open their eyes? But they have gone further in Victoria. In May last, the leading journals at Melbourne openly and energetically advocated the free admission of such reprints, and declared that the sooner the law was utterly ignored the better:—and as soon as the New Constitution is in force they will do it. It is not to be supposed that the practice at the Cape began with the enactment of the new law, nor is it likely that any law in any of our Colonies will in any degree prevent the freest and fullest circulation of such editions,

* It will be remembered from our previous communications, that the longitude of Central Africa has been shifted about 100 miles further to the west by Dr. Vogel's observations than our previous observations had given.

simply because they think it their interest to have them, and will shut their eyes steadfastly to their introduction. The only effectual way to secure the just rights of English authors lies in the attainment of International Copyright with America:—thus destroying the evil at its source; and then the more reprints there the merrier.

"Yours very truly, WILLIAM HOWITT."

Mr. Sandy McCallum, whose merits are known to geologists as a collector of Silurian fossils in the south of Scotland, and whose labours are described in the works of Sir Roderick Murchison, was carried off suddenly last month by an attack of cholera. He has left a widow and five children. A subscription, we understand, has been opened at the rooms of the Geological Society, Somerset House, for the relief of the widow and orphans of this humble servant of science.

We hear that the legal and political sketches of the late Right Hon. Richard Lalor Shiel have been collected, and are about to be published in a compressed form. They are to be edited by Mr. Marmion Savage.

The daily papers record the death of Lord Robertson, in Edinburgh, on Wednesday last. Lord Robertson will be remembered as a graceful poet of the second rank, and as a member of a rather brilliant circle. A second series of his poems lies before us unopened; and a glowing eulogium on Lockhart, which lately appeared in the *Times*, has been generally attributed to his pen. He died very suddenly, of apoplexy.—We have also to announce the death of Mr. W. R. Macdonald, once the editor and joint-proprietor of *Bell's Life in London*, *The Sunday Herald*, *The British Drama*, *The Literary Humourist*, &c., and a contributor to the columns of various newspapers. Mr. Macdonald wrote some controversial works of a serious kind and a number of children's books.—Mr. L. M. Morgan, whose death is also announced, was the author of a few works, which have a social and benevolent rather than a literary interest—such as 'The Revolt of the Bees,' 'The Reproof of Brutus,' and 'Hamden in the Nineteenth Century.' He will be remembered among the enthusiastic disciples of social reform by his project of a self-supporting village.

Among forthcoming sales of interest, we notice the library of the Rev. Dr. Hussey, comprising classical, astronomical, and general books,—and the residue of the library of the late Mr. Jolley, comprising early voyages and travels, facetiæ, poetry, drama, impostures, and other curious subjects; also Garrick's celebrated cup, formed from the mulberry-tree planted by the hand of Shakspeare, with an inscription on the stem from the 'Ode' of Garrick, by whom it was used at the representation of the Shakspearian Jubilee at Drury Lane.

The Admiralty have recently published a large chart of the Arctic Regions, in which the justice, which we long since advocated, has been rendered to the Americans, by substituting the name of "Grinnell" for Albert Land. The entire island discovered by Capt. McClure, and to which he gave the name of "Baring," has also been very properly altered to Banks Land, it being part of the land originally discovered and named by Parry. The southern portion of the island is named Baring Land in compliment to Sir F. Baring.

The following note tells its own tale:—"My attention has been directed to an extract in your journal [No. 1415, page 1486,] from 'Mitchell's Jail Journal' relating to 'Garratt' and the railway robberies, and I am sure your desire to avoid injustice will induce you to insert this. First, having been the agent engaged in conducting those arduous prosecutions, I am enabled to contradict the reckless assertion by Garratt, that Mrs. Garratt has the money (40,000*l.*) he left behind him. I believe her to be thoroughly honest, and now seeking an honest livelihood, having been, like all engaged, a sufferer by those depredations. Secondly, as to the application to Lord John Russell, it is due to me to explain that no application, in the terms indicated, was made. I sought to elicit information and confederates, and should

have succeeded if left to myself; but under heavy blows and great discouragements, and with law-suits to defend and bring, I was involved to a ruinous extent without indemnity; still I made no such dishonourable proposals as indicated, although I rejected several.—Yours, &c. C. NASH, JUN."

The Rev. Frederick Bulley has been elected President of Magdalen College, in the place of Dr. Routh. Magdalen has always been one of the finest architectural monuments in Oxford; and it is now undergoing a restoration and rebuilding which will still more improve its artistic appearance. Dr. Routh's death will permit the restorers to remove his residence,—one of the drawbacks to the beauty of that admirable pile,—and to rebuild the President's house on a scale and in a style in harmony with the great edifice itself.

From Paris we learn that the Academy of Inscriptions et Belles Lettres has nominated M. Villemain President, and M. Laboulaye Vice-President for 1855.

Praise, we suppose, is always welcome; but cases are imaginable in which the applause rendered to genius may be so tempered by explanations as to withdraw from it some portion of the honey. Such cases, we suspect, have an illustration in the letter just received by that literary free-lance M. Gragnier de Cassagnac from His Holiness the Pope, in which the pontifical critic, after accepting and praising very warmly that writer's 'Histoire des Causes de la Révolution Française,' adds, with a charming simplicity, "My son, I have not yet had time to read it."

A half-yearly general meeting of the members of the Preceptors' College was held on Saturday last, when a practical address was delivered and the report read. From the latter it appeared that 227 candidates have presented themselves for examination; of which number nine obtained first-class certificates, twenty-seven second-class, and forty-six third-class. In the department of teachers, thirty-two candidates offered themselves for examination, and of these twenty-nine passed. The amount of receipts and expenditure showed a balance of 107*l.*; the account of liabilities and assets showed a fraction under 30*l.* against the institution.

Messrs. Letts write:—"With reference to your kind suggestions upon our 'Library Catalogue,' given in the number for December the 30th, permit us to reply that the desideratum is already provided for by the third column appropriated to title, &c., which, being filled up in alphabetical order, with a corresponding letter at foot of opposite page, affords a more commodious reference than the mischievous and all but obsolete practice (in such cases) of cutting away the margin to show the succession of letters. The number of leaves in the book admits of five to every letter of the alphabet, each leaf has twenty-six lines, giving in the aggregate one hundred and thirty, which may of course be increased at pleasure by having a thicker book. The plan has been successfully carried out for some time past in our 'Analytical Index.'"

Our contemporary, the *Athenæum Français*,—in the usefulness and success of which we feel something of the pride of parentage,—draws attention to the fact of a quantity of spurious Greek manuscripts being in the market, and warns librarians and collectors against the same. "The history of literary forgeries," says the French review, "committed since the sixteenth century, by forgers more or less able, who have pretended to discover and make known works of which the loss was much regretted, would be long and curious. Not to speak of more ancient counterfeits, there are—the essay *De Consolatione* of Cicero, fabricated in the sixteenth century by Sigonio; the *Catullus* of the Venetian Corradino (1738); the tragedy *Tereus*, attributed to Lucian Varus, by his editor Heerkens; the *Petronius* and the *Catullus* of Marchena (1800-6); the Claudius Numatianus Rutilius of Begin; and still more recently, the Greek translation of the Phœnician historian Sanchoniathon, by Philo of Byblos, of which the author was F. Wagenfeld, a student of Bremen, who deceived the philological sagacity of Grotefend. The greater part of the authors of these deceptions had no ob-

ject beyond mystifying the learned. But we have now to announce an imposture, or rather series of impostures, which appears to have a different aim. A Greek, an able palæographer, is now hawking about Paris and London a number of Greek manuscripts. He pretends to have in his possession forty-seven Comedies of Menander, the whole dramatic works of Sophocles, the Comedies of Philémon, the Dictionary of Cheremon, and a Catalogue of the Alexandrian Library in 11 volumes folio. He says he has left this last manuscript in Greece. The others are executed with remarkable caligraphic skill. One of our most eminent Hellenists having had occasion to see some of these pretended ancient manuscripts, after examining them for a few moments, exclaimed 'They are just three years and a half old.'"

Certain Members of the Archæological Association are not disposed, it would seem, to acquiesce in the censures of Mr. Pettigrew's friends. A general form of resignation is being handed about, drawn up in the following words:—"The undersigned hereby give notice to the Council of the British Archæological Association that they resign their several offices and positions in that Society, and require that their names be forthwith removed from its list of Members. They have arrived at this conclusion for the following reasons:—1. Because the Treasurer, Mr. T. J. Pettigrew, has repeatedly set at defiance the laws of the Association, by interfering with and usurping the duties of the Secretaries, and by acting without the authority of the Council; and has been the cause thereby of frequent quarrels and dissensions both between Members of the Association and between it and other gentlemen, to its continual, incalculable, and irreparable detriment.—2. Because an assemblage, styled an 'Extraordinary General Meeting,' was convened by notices purporting to issue from the Secretaries, which, however, two out of the three had never sanctioned; and purporting also to issue in pursuance of an alleged requisition which the two officers aforementioned had never seen, though their names were without their knowledge appended to the said notices in attestation of their having done so.—3. Because the said notices, though for a meeting stated to be 'General,' were forwarded to a section of the Members only.—4. Because the proceedings of the said meeting were characterized by the grossest partiality and injustice; the Chairman, Mr. F. H. Davis, having refused to hear several gentlemen who were known to be opposed to the party which he avowedly favoured, and having taken no steps to restrain the clamour with which those gentlemen were assailed.—5. Because the said proceedings have resulted in the loss of an officer, whose sole offence consists in vindicating the indubitable rights of himself and his colleagues, and in resisting the Treasurer's illegal invasion of those rights.—6. Because they feel that under the present systematic misgovernment of the Association there exists no possible guarantee against the repetition of similar evils."

A Correspondent sends us the following notes, which may interest readers in the days of mirth and mistletoe:—"It may not be uninteresting to some of your readers to know that in the tenth century a game was invented for the especial benefit of the clergy of his diocese by Wibold, Bishop of Cambray. It was entitled 'Ludus Clericalis,' and was designed as a substitute for amusements of a more exciting character. The 'Chronicon Cameracense' gives the following curious notice of the inventor and its game:—"Wiboldus, Noviomensis ecclesiæ archidiaconus, vir videlicet tam secularibus quam ecclesiasticis disciplinis satis imbutus consecratur in episcopum Cameracensem anno 965. Iste siquidem clericis alie amatoribus regularem ludum artificiose composuit, quo videlicet in scholis exercentes, charitate vitia vincere assuescerent, sæcularemque et jurgiosam aleam refigerent!" The Abbé Migne reprints the Bishop's work at length in Vol. 134 of his 'Patrologia Cursus Completus,' with the annotations of Leglay, who observes 'Les termes grecs que Wibold affecte d'employer dans l'explication de son jeu donnent lieu de croire qu'il avait quelque connaissance de la langue d'Homère, ce

qui était fort rare au dixième siècle.' The game was played with a circular table, the border of which was divided into fifty-six compartments, and with a revolving needle in the centre. Each compartment contained the name of some virtue, commencing with Charity and concluding with Humility, each of which bore a particular value. The whole apparatus reminding one very forcibly of the pieman's of the present day.

"I am, &c., JOSEPH B. M'CAUL."

We are glad to find that the Australians are alive to the importance of exhibiting specimens of their wares at the French Exhibition, and that, in some places, the matter is being taken up with considerable spirit. At Melbourne, 300 mechanics are employed in erecting a "Crystal Palace,"—the design of which is spoken of in high terms,—in one of the best positions in the town. The building was approaching completion in September, when the last advices left; and much interest was felt in the promised exhibition of the contributions previous to their being despatched on their way to Paris. The whole was expected to be ready towards the end of October. The building, although erected for this temporary purpose, is to be retained permanently, and will doubtless be turned to good account.—The people of Sandhurst are also making a collection for Paris, and intend to have a previous local exhibition.—At Singapore, the collection of articles is being sent in from all parts of the Indian peninsula and Archipelago. Inlaid furniture, with illustrations of its fabrication, from Penang;—stuffed birds, ornamental embroidery, and mat-work, from Malacca;—Dyak jars of "supernatural manufacture, and dug from the bowels of the earth," from Sarawak, valued as high as 2,000 reals each;—specimens of fine cinnamon, and of bark used by the Jaccons as clothing, from Malacca. The King of Siam (who, by the way, is a good English scholar, an expert mechanic, and well inclined towards the English personally) sends some curious articles in mixed metals and valuable silks. The Rajah of Tringau contributes some very rich gold-embroidered cloth, and costly articles of wearing apparel and silks have been received from the Tumungong of Singapore. Some complaints were made of the restrictions put upon the Committee with respect to the sending of samples of raw produce. Such restrictions, we presume, must have originated either with the East India Company or with the British Commission. The embargo seems to have been in part removed by a recent communication, but almost too late to allow a good collection to be made. This is greatly to be lamented, for no part of the world yields more curious, abundant, and valuable natural productions than the neighbourhood of the Indian Archipelago,—as was proved at the Great Exhibition of 1851,—where, however, they were, to the great annoyance of the contributors, mixed up with the productions of India Proper. In a scientific museum, this mode would perhaps be the only proper one to be adopted, but in an Exhibition for commercial rather than scientific purposes every act which tends to the generalization rather than the localization of the productions seems an error. A Chinese holiday carriage, which is being built for the occasion, and a splendid collection of Malay and Dyak arms, the property of Col. Butterworth, will form part of the contribution to the Exposition in the Champs Élysées.

The WINTER EXHIBITION OF CABINET PICTURES, SKETCHES, and WATER-COLOUR DRAWINGS of the BRITISH SCHOOL, is NOW OPEN, at the GALLERY, 121, Pall Mall, Daily, from Ten in the Morning until Five.—Admission, One Shilling. Catalogue, ed.

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

CYCLOPEDIA, Albany Street.—NOW OPEN, with a Colossal Moving Diorama of the City and Bay of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the great Eruption of 79, and present state of the Excavated City. Painted by Mr. J. M'NEVIN, from Sketches taken by himself in 1852. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1s.; Children and Schools, half-price.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—THE CAVALRY CHARGE at BALAKLAVA (painted by the Messrs. Denon) is now added to the DIORAMA illustrating EVENTS of the WAR. The Lecture by Mr. Stocquer, including Description and Diagrams of Battles, Campaigns, &c. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

MONT BLANC.—MR. ALBERT SMITH'S MONT BLANC is NOW OPEN EVERY EVENING (except Saturday), at 8 o'clock. The Morning Representations take place every Tuesday, Thursday and Saturday, at 3 o'clock. Stalls can be taken at the Box-office every day, from 11 till 12.

EGYPTIAN HALL, PICCADILLY.

QUEEN'S CONCERT ROOMS, Hanover Square.—The AZTEC LILLIPUTIANS, the REPUTED GOINS of EXETER, and the EARTHAIEN, or EIDMANNIGES, People who burrow underground. The first of either race ever seen in Europe—the existence of which has been much disputed. Exhibitions daily, from 12 to 2 o'clock. Admission, 2s.; Reserved Seats, 3s.—EXHIBITIONS for the MILLION, in LEICESTER SQUARE. Observe the Prices—Gallery, 6d.; Body of the Hall, 1s. Stalls, 2s. Daily, from 3 to 5, and 7 to 9½. Lectures at 4 and 8. The Rooms, having been prepared for the purpose, will accommodate 1,500 persons at a time. Miss Clarie Wallworth, Mr. Henry Smith, and Mr. W. J. Morris, on the Crystal-Phonic, will assist these human puzzles, forming an Entertainment unlike any before introduced to the London public.

LOVE'S NEW ENTERTAINMENTS.—Christmas Holidays.—Ventriloquism Extraordinary.—Upper Hall, Regent Gallery, 69, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday; Saturday, at 3.—MR. LOVE, universally accepted as the first dramatic ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called "THE LONDON SEASON," and other entertainments. Piano-forte, Miss Julia Warman.—Stalls, 3s.; Area, 2s.; Gallery, 1s.—Tickets at Mitchell's Royal Library, 33, Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 4.

ROYAL POLYTECHNIC INSTITUTION.—The following REMARKABLE NOVELTIES have been SPECIALLY PREPARED.—LECTURE by J. H. PEPPEY, Esq., on Professor Wheatstone's Experiments on the TRANSMISSION of SOUND, through Solid Conductors, illustrated by a TELEPHONIC CONCERT.—FIRST PART of an ENTIRELY NEW and SPLENDID OPTICAL DIORAMA, illustrating the VOYAGES of SINDBAD the SAILOR, with beautiful PHANTASMAGORIA EFFECTS, and appropriate Music, arranged by Mr. W. Vaud.—MONDAY EVENING, the 18th inst. LECTURE to the INDUSTRIAL CLASSES, by Dr. BACHOFNER: Subject, "The PEASANT-BOY PHILOSOPHER.—NEW VIEWS of the WAR: SIEGE of SEBASTOPOL, &c. &c.—PERKINS'S STEAM GUN, discharging SIXTY Balls per minute.—Mr. Crawford's VOCAL ENTERTAINMENT of the PATRIOTIC SONGS of SCOTLAND. For the special AMUSEMENT of the JUVENILE AUDITORY, DAVIS'S INGENUOUS MARIONETTES will be exhibited.—All the other LECTURES, EXHIBITIONS of MODELS, &c. &c.—Fresh Decorations.

Mr. VAN NOORDEN'S NEW MUSICAL GAME, the POLY-HARMONICON, explained Daily by the Inventor.

SCIENTIFIC

SOCIETIES.

GEOGRAPHICAL.—Jan. 8.—The Master of Trinity in the chair.—Among the late donations to the Society exhibited were Mr. Briery's sketches of the Baltic, Mr. Arrowsmith's recently published map of the southern portion of the Crimea, and the fifth edition of the Admiralty and Mr. Stanford's maps of Sebastopol and the Allied Campaigns.—Mr. Thomas Muir was elected a Fellow.—"On a Journey in Persia," by Mr. Keith E. Abbott, Her Majesty's Consul at Tehran, communicated by the Earl of Clarendon.—A despatch from Dr. Livingston, containing his routes from Lake Ngami through the interior of South Africa to Angola, communicated by Sir Roderick Murchison, and a despatch, communicated by the Earl of Clarendon, from Col. Herman, Her Majesty's Consul at Tripoli, reporting that some slight hopes may still be entertained that the report of Dr. Barth's death is unfounded.

ARCHAEOLOGICAL INSTITUTE.—Jan. 5.—Mr. Overy in the chair.—A paper, by Mr. E. T. Godwin, on the subject of a Roman villa, which had been discovered in a field occupied by Mr. Perrin, at Colerne, Wilts, was read.—Mr. Western read a letter from Dr. Sherlock, 'On the Tiles found at Chertsey Abbey,' illustrated by a great number of drawings.—Mr. Poynter laid before the Society a number of tesserae from a mosaic in St. Sophia, at Constantinople, which had been given him by one of our diplomatic agents in the East. Their material was glass, and they consisted of ten varieties, namely, gold, silver, two shades of blue, dark brown, grey, two shades of green, red and amber.—Mr. Digby Wyatt laid before the meeting the splendid work of the Prussian Government on the Church of St. Sophia, containing coloured diagrams of the minutest details of that famous edifice.—Mr. A. Nesbitt made observations on some casts from the three ivory Diptychs in the treasury of the Cathedral of Monza, in Lombardy.—Mr. Franks exhibited various silver articles, which together with an ingot of silver weighing 80 lb., had been found at Coleraine, in Ireland.

ZOOLOGICAL.—Jan. 4.—Dr. Gray, V.P. in the chair.—Lord Clermont, Hon. F. H. W. G.

Calthorpe and Messrs. W. Russell, F. Kumpf, J. H. Dark, F. Peake, and T. Staunton were elected Fellows of the Society.—The Report of the Council stated that the total number of visitors during the year 1854 was 407,676; and the money received at the gates amounted to 10,798l. 19s. 6d.; that the number of Fellows elected or re-admitted during the year was 142, being an increase of 27 over the preceding year, and an increase of 93 over the average of the last fourteen years.

ENTOMOLOGICAL.—Jan. 1.—Edward Newman, Esq., President, in the chair.—Mr. Douglas exhibited a living specimen of *Cratonychus castanipes*, Paykull, one of the Elateridæ, not hitherto recorded as British, recently found by him in the rotten wood of an oak.—Mr. Stevens exhibited two rare beetles—a male of *Jumpos Ruckeri*, from Darjeeling, and a female of *Dicranoccephala Wallichii*, from India.—The President exhibited a specimen of silken felt formed by the caterpillars of *Saturina Pavonia media*, which were confined separately in receptacles, presenting no salient points to which the cocoons could be attached, and so the whole stock of silk was spread over the smooth surface. Herr Pretsch informed him that a series of very interesting experiments with these larvæ was now in progress at Vienna, and promised perfect success. The President read a short note on *Helobia impressa*, tending to show that it was distinct from *H. nivalis*, with which it had been recently associated; but rather courting inquiry on the subject than insisting upon the correctness of his opinion.—Mr. Downie exhibited a bee-hive containing several improvements, the efficacy of which he had proved during three years; consisting, first, of a movable floor, by means of which the essential matter of removing dead bees, &c. in winter might be accomplished without admitting cold air; secondly, a series of ventilators to insure the admission of air according to circumstances; and thirdly, an easy method of feeding the bees.—Read:—"A Memoir on the British Species of the genus *Stenus*," by Mr. G. R. Waterhouse and Mr. E. W. Janson.—"Notes on the Economy of various Insects," by Mr. J. Curtis,—and "Descriptions of some Species of Brazilian Ants," by Mr. J. Smith, with observations on their economy, by H. W. Bates.—Mr. Brayley, referring to the habits of one of the species of ants mentioned in the last paper, said that the immense trains of ants carrying the mutilated bodies of various insects, might illustrate the accumulation of insect remains at times seen in the strata of the secondary geological formation, for if these trains had been suddenly covered up, the stratum in which they were embedded would afterwards exhibit the same appearance as the deposits to which he had alluded.—Mr. Saunders said, many circumstances, local or accidental, at times caused great numbers of insects to be congregated together; he particularly remembered at this moment the vast quantity of the beetle *Galeruca tanacetii* seen a few years since on the Norfolk coast.

INSTITUTION OF CIVIL ENGINEERS.—Dec. 12, 1854, and Jan. 9, 1855.—James Simpson, Esq., President, in the chair.—Both evenings were devoted to the discussion of Mr. P. W. Barlow's paper 'On some peculiar Features of the Water-bearing Strata of the London Basin.'—At the close of the last Meeting, M. Néron, of Paris, exhibited an ingenious mode of placing detonating caps on the nipple of a rifle or a musket. The apparatus consisted of a tube containing twenty-two caps, placed parallel with and close beside the barrel, being partially inserted in the stock and so arranged that whilst the near end was attached by a pin to the hammer, the further extremity was free to travel in a slot. Its action was very simple—the tube being filled with caps from a reservoir, several of which would occupy but a very small space, the end cover was turned down. On drawing the hammer to half-cock, the tube was drawn forward until a cap was brought over the nipple, and at full-cock the cap was pressed down upon it. After firing, if any portion of the copper remained

attached to the cap it was removed by a small picker preceding the tube, on its being again brought forward to repeat the operation. It was evident that by this simple and cheap addition to any fire-arm, much time must be saved in loading, and a great waste of caps must be avoided, whilst about twenty-five per cent. of copper was saved in making the caps—and they were kept dry in the reservoir instead of being exposed to damp and running the risk of not exploding, as had occurred frequently in action on recent occasions in the Crimea. The system was stated to have obtained the approbation of the highest military authorities in France, and with the characteristic alacrity of the government of that country to be already in process of adaptation to the Minié rifles and to fire-arms of all kinds for the army; it had, only within the last few days, been brought here to lay before the English Government, and was submitted for the inspection of the Members of the Institution of Civil Engineers.—Mr. W. Woodcock was elected an Associate.

INSTITUTE OF ACTUARIES.—Jan. 8.—Charles Jellicoe, Esq., V.P., in the chair.—Fifteen candidates were elected Associates.—The chairman announced the result of the annual examinations in London and Edinburgh, by which it appeared that nine candidates had offered themselves for matriculation examination, and four had passed; and that five had presented themselves for the second year's examination, and had all passed. The third year's examination, entitling those who pass to a certificate of competency from the Institute, was to take place in London for the first time in December, 1855.—'On the Improvements in Life Contingency Calculations,' by Mr. E. J. Farren, V.P. The author commenced by stating that the prevailing system was one not of variable but of invariable quantities. At the very threshold the admission of two important assumptions was asked for, viz., that the rate of mortality was always invariable at the same age, whether old or young, and that the rate of interest was equally invariable for all periods, whether long or short. Upon these assumptions of invariability the system was formed for assessing the relative values of different cases, thereby necessarily indicating in every instance an invariable answer, and with such indications the system rested content. The nature of the improvements sought to be introduced was to openly take as the foundation, a calculus not merely of averages, but of their fluctuations, and to thereby declaredly characterize the methods of actuaries, not as composing a system of specific and precise results, whatever it might be of prices, but of results expected to vary between limits of assigned ranges of probability. By such a declaration it would at once become manifest that the expected gain by computation was not to find even averages invariable, but that their fluctuations being considerably less were more readily dealt with than those of the elements of which they might be composed. The phrases of the prevailing system employing "a true table" or "a true rate of interest" would thus under such a calculus have to give way to average tables with their probable limits, and the per-centages of their expected deviations. Prof. De Morgan and Mr. Galloway, our native writers on Probability, had long since distinctly inculcated that such a change of system was to be expected of actuaries; and the more so because, although the differential and integral calculus was not prevalent in England when the standard treatises of Price, Morgan, Baily and Milne, or even of David Jones, were written, yet that such was no longer the case. The sort of assistance the calculus was capable of giving to actuaries is readily to be seen in definite integrals considered as averages, because a class of questions of every-day occurrence were thereby readily solved, which were merely treated assumptively by the system in use. Supposing, then, the subject of averages and their fluctuations to be thus thoroughly investigated by actuaries, as men having practically to deal with them, it was to be presumed that such a system would also be applicable to other schemes of finance, and even to certain classes of problems in political economy.

MEETINGS FOR THE ENSUING WEEK.

- MON. Statistical, 8.—'On the Effect of the Recent Orders in Council in respect to our own Commerce and that of Neutrals,' by Mr. Waddilove.
- TUES. Institution of Civil Engineers, 8.—'Description of the Aqueduct of Roque-tavouir, near Marseilles,' by Mr. Kemble.
- Royal Institution, 3.—'On Magnetism,' by Prof. Tyndall.
- WED. Society of Arts, 8.—'On the Smoke Nuisance, considered Historically, Morally, Scientifically, and Practically,' by Mr. Muir.
- Geological, 8.
- THURS. Artists' and Amateurs' Conversazione, 8½.
- Royal Academy, 8.—'Architecture,' by Prof. Cockerell.
- Society of Antiquaries, 8.
- Royal, 8½.
- Royal Institution, 3.—'On English Literature,' by Mr. Donne.
- FRI. Royal Institution, 8½.—'On Magnetic Philosophy,' by Prof. Faraday.
- SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

Biographical Catalogue of the Principal Italian Painters; with a Table of the Contemporary Schools of Italy: designed as a Handbook to the Picture Gallery. By a Lady [Maria Farquhar]. Edited by Ralph N. Wornum. Murray.

There is an old proverb that a good glove should be "of Spanish leather, cut in France and sewn in England." The Germans may have more research than we have,—the French more vivacity of narrative,—but for painstaking, exhaustive accuracy, recommend us to such a compendium as this the next time we wander by the Arno, or, looking down upon the yellow Tiber, wonder how a river so fragrant in the memory can be so far otherwise in reality.

A list of authorities, appended to a preface, seems to us as ostentatious a display as if a man should wear a dress-coat formed of his title deeds stitched together:—but in the present case it shows a care and research in a female writer worthy of praise. Ten pages of catalogue imply a mass of reading on a single subject more to be expected in the George Steevens age than the present, when men make daily re-discoveries of things that have been already discovered and rejected, and lay down as new dogmas already refuted.

The book contains a short sketch, compiled from German and Italian authorities, of the lives and works of each artist,—clear, truthful, but not graphic or very full of anecdotes. The criticism of the work is less eclectic and more discriminating than is generally found in *dilettante* writers. A useful tabular view of contemporary painters is appended in a pocket attached to the cover. With this chart of intellectual progress we can trace, at a glance, the growth and decline of Art at particular periods. If the attempt succeeds, the authoress promises a Catalogue of the Artists of other countries.

In the Preface, Mr. Wornum, who has revised the general work, traces the history of modern criticism, dating its rise from materialism, to Wachenroder's 'Heart Effusions of an Art-loving Monk,' published six years ago. Since this period criticism has improved faster than painting, and has grown ideal, poetical and super-subtle. The deep observation, that to feel the whole force of a picture "we should know something of the life of its painter and the age he lived in," is so true that it amounts to one of those universal truths called a truism, analogous to the fact that William the Conqueror has departed this life, and that the "coming man" has not yet arrived. Every picture is the record of an age, and may be looked at either as an antiquarian curiosity or abstractedly for its beauty of form, colour, or subject alone. Rubens cannot be appreciated without a perception of Flemish wealth, or Titian without a knowledge of Venetian stateliness, ambition and pride:—for his country's atmosphere, its Asiatic character, its religion, its statesmanship, are all to be found somewhere upon his pictures. Pictures are, in fact, illuminated pages of history, torn out and scattered loose over the world.

History is a dull study till the boy finds it rise up in spontaneous pictures in his mind. Then he sees Wolsey gnawing his cane in a rage or striking the council-board with his fist,—Cromwell smoking his pipe or throwing the cushions at Ireton,—Elizabeth playing with her birds or putting the crossbow to her shoulder. So in painting: it is

lifeless till we know the aims and passions of the painter, and till our own opinions of his character are verified by history or biography. No one could think Il Robusto a mild man, or Da Vinci a blusterer like Ribera. About Correggio's works there are piety and amiability, and about Salvador Rosa an animal vigour, fiery and redundant.

Miss Farquhar's good sense may be appreciated from the fact, that her Editor describes her chief object as having been to "try how little, compatible with utility, could be said about each painter." After all, 207 double-columned pages include only one-fourth of the names recorded in Italian Art-literature. A valuable but ephemeral portion of the work is a list of the present position of the existing works of the chief painters, several thousand of these being noted down.

The table of schools contains the names of upwards of 500 painters,—a plan lately carried out in a German work with very great fidelity. The names of the chief painters are printed large, and so on, in gradations, till the smaller men become scarcely visible. The connexion of master and scholar is disregarded, not without reason. The table includes a term of six centuries, and the date of each painter's death is given rather than that of his birth. The various schools are classed together in a way that is clear enough for an Englishman, but would prevent the work ever acquiring a European fame. Italian cities are as jealous of the individuality of their epochs of painting as German duchies of their genealogies. On this account we blame the common title of Lombard School, applied to the painters of not merely Mantua and Cremona, but of Parma and Milan.

If this age is an encyclopedic age and our best minds are doomed to merely take stock of past labours, the above work shows a mind well fitted for such useful toil. Mr. Wornum is right in trying to fix the volatile definitions of Art-epochs, at present so vague and inaccurate. The rise of Art may, as he justly says, be supposed to include the thirteenth, fourteenth, and fifteenth centuries,—the climax may be the sixteenth century,—and the decline the seventeenth and eighteenth. The pre-Raphaelite artists should properly form the Quatro-Cento, distinguished for its sentiment and its ignorance of physical form. The Cinque-Cento is distinguished by the balance of mind and matter, soul and body, sentiment and sensuousness. The Eclectic period is a period of mere naturalism, copying, and patchwork.

We recommend Miss Farquhar's book as a *vademecum* for Continental tourists as necessary as the famous guide in the red livery.

Illustrations of Scripture. By an Animal Painter.

With Notes by a Naturalist. Photographed by Constable & Co., Edinburgh.

THIS elegant drawing-room book is another instance of the numerous purposes to which photography promises to be applied. The designs are by a Lady, who has selected various scriptural subjects which would enable her to display her knowledge of animal form. In some she has been too ambitious, in others too vague,—but in the greater part we discover traces of a love of nature, much good drawing, and a delicate and careful manipulation. A few are in bad taste, such as the Dogs licking the sores of Lazarus, and the Dogs with the Bones of Jezebel,—and a few, such as the Swine running down into the Sea, and the Frogs in Pharaoh's Chamber, are poor as caricatures, and ludicrous as illustrations of a solemn subject. The following list of sketches will give some conception of the versatile observation of the designer,—but nothing save a view of them can convey a correct impression of their faithful drawing and the finish of their details. The Dove being taken into the Ark—the Raven at the Deluge—the Ram caught in the Thicket—the Releasing of the Scape Goat—the Plague of Frogs—the Destruction of the Egyptians—the Goats and the Conies—the Roes among the Lilies—Solomon's Apes and Peacocks—the Dogs devouring Jezebel—the Parable of the Pet Lamb—the Camels at Rabbah—the Owls of the Prophecy—the Swallow and the Crane—the Ox and the Ass—the Leopard—the Shepherd and the Lion—the Hen and

Chickens—the Swine running into the Sea—and Lazarus and the Dogs of Dives. Of these designs the worst are those in which the lion or some less known animal is introduced,—while the artist has always succeeded in English scenes and English subjects. Perhaps one of the most beautiful drawings for composition, truth, and delicacy is that of the Roes among the Lilies, in which the sudden arrest of motion, the vigour and yet timidity are conveyed with great perfection,—the truth and fineness of line being almost worthy of Flaxman. In some cases, in which the animals in the foreground are exquisitely true and the earthy rocks in the background exquisitely false, we receive the impression of a theatre where living actors move in canvas forests and under canvas skies with gas for sunlight and lamps for stars. In a few of the examples we have too much of the blunt touch of the crow-quill. There is often a crudity unworthy the general merit of the work, its originality of design, its sincerity, and its truth. The distances and horizons are frequently black and harsh, and the effect of water is never given with correctness. In one drawing, which is rather overcrowded, there seems an ostentation of observation in placing one chicken upon the back of the hen; such exceptions are not worth recording, and rather startle by their novelty than gratify by their air of reality. It is in Art what a conceit is in Poetry, for the beauty and not the singularity of nature is what we all seek. In the first illustration the writhing neck of the dove is beautifully given, and not less exquisitely the living hazel of the eye, restless yet calm, and full of tenderness and love. We need scarcely say the whole book is impregnated with pre-Raphaelite feeling, but avoids its absurdities.

For the letter-press we cannot say much, for it falls under the head of guide-book literature. The chapter on the horse is a wonderful undigested conglomeration of quotations from Mazaepa and the Bible, Milton and Dr. Kitto. What we should have had is a clear, critical account of the animals of Palestine,—in which the writer could have defined their English names, and explained that “cony” is not a rabbit, but a sort of jerboa—and that the “turtle” of the Song of Solomon is not the animal beloved of aldermen, but our own ringdove, with its brown eye and neck of veering emerald and purple.

NEW PUBLICATIONS.

Coming of Age. (Engraved for the Glasgow Art-Union.) Painted by W. P. Frith. Engraved by F. Holl. Printed by Queen.

THIS is a sharp, finely-cut, brilliant engraving; and we do not praise it too much when we say it is worthy of Mr. Frith's picture, so teeming with life, character, expression, and above all with refined and pretty faces. So *débonnaire* and comely are Mr. Frith's peasants, blushing and coyly eyeing the young heir who seems likely to be a very King of Hearts that we sometimes from sheer dogged contradiction long for coarse buxomness and a little more of Hogarth's honest work-a-day nature;—nature that will wash and bear sun and rain, embrowned rosy rompishness, not quite so smooth, sleek and sunny, and more fit for the subject. These faces are not those of mere arch-grisettes and smart housemaids; but are, perhaps, too much of semi-lady, ambiguous, poetic creatures, more beautiful than truthful. But why criticize when the whole picture is life and sunshine, with bells ringing, men shouting, boys running, maidens laughing, roast ox smoking, knives sharpening?

Very well drawn and very equal is this climacteric picture of a painter whose mind is brimming with forms of grace and beauty. How smart and holiday-trimmed are the lasses with the clean coif and simple kirtles; now

—the merry bells ring round
And the jocund rebecks sound!

With what calm and serene delight the parents themselves, still in the full bloom of age, watch their heir, who is listening with proud condescension, his hands on the pommel of his rapier (his eye tells us he is “sudden and quick in quarrel”). While Holofernes doles out the insufferable pedantry of

a village schoolmaster's address, enrolling all the deities of Olympus to guard the gallant on that portentous day!—With what concentrated and learned eagerness the butterer commences his attack upon the prostrate ox, while “Potts, the serving-man,” already too much elated, in a very unseemly manner leaps upon a bench, interrupts good master Holofernes, and begs to propose a toast! Soon a keen, angry glance of young Sir Marmaduke will knock him back, sorely cowed, and drive him to some nook in the shadow of the gateway, where he may finish his flagon of sack in peace, tie up his points afresh, and re-arrange the broken feathers in his cap and the roses in his shoe, re-tie his garters,—so that about twilight he may sneak out a soberer and a better “serving creature.”

FINE-ART GOSSIP.—The war has nearly dissolved that union between the military service and science, art and industrial administration commenced by the Exhibition of 1851, by the employment of Col. Reid and many officers of Engineers and the Sappers and Miners, and subsequently continued by the engagement of Capt. Owen, R.E. as Inspector of the Department of Science and Art; of Capt. Gibbs, R.E. as editor of a series of Architectural and Structural Designs for the use of artizans and of several Sappers and Miners in the general service of the Department. Capt. Owen has resigned his civil employment as Inspector of Schools in order that he may go out to Sebastopol. Capt. Gibbs is there already with his company. Corporal, now Sergeant, Dickson, who used to help in the arrangement of the drawings of the students of Local Schools of Art competing for prizes, has charge of the stores at Balaklava; whilst the two Sappers, Corporals Rendered and Hammond, who had learnt the art of photography and went to the Crimea to turn it to practical account in military service, met with watery graves in the night of the November storm off Balaklava.

Messrs. Beale, in a letter to the *Builder*, vindicate the correctness of our statement of the capabilities of their patent bricks to resist pressure, which that paper impugned. The weight we referred to was the lateral strength of the brick, and not the weight required to crush it. The bricks are tested by placing them on bearings seven inches apart, and the breaking weight is applied to the middle of the brick.

The Scottish Architectural Exhibition, now open, contains some interesting drawings by the traveller Bruce, executed when he was in Africa in 1766. An interesting series of chronological illustrations of architecture, casts, drawings and models forms the chief attraction.

Mr. Mayall, the eminent professional photographer, has read a paper to the Photographic Society, explanatory of his method of producing “Albumen pictures on glass.” With this agent, says Mr. Mayall, “an unusual amount of detail can be obtained, and for stereoscopic views of public buildings, places of interest, &c. it is evidently the best process known.” Next to portraiture, the transparent glass views are perhaps the most interesting subjects for the stereoscope. With the view of enabling amateurs to secure such pictures with facility, Mr. Mayall described the whole of the chemical arrangements necessary for success, and went through a variety of experiments to illustrate his mode of manipulation. Several fine specimens were exhibited, and in the course of the lecture Mr. Mayall developed a number of impressions taken only a few hours previously. The ingenuity displayed in bringing the process to a state of perfection elicited much interest and secured a cordial vote of thanks at the conclusion of the proceedings.

Mr. Clark Mills, the American sculptor, who erected the bronze equestrian statue of Jackson, has contracted to supply a duplicate to the city of New Orleans for about 6,000*l.* He is now in a “mortal fix,”—for the other day his studio and model were destroyed by fire, and the Government have prohibited his taking a cast of the original.

The other day, by a new mode of blasting, a mass of stone, 250 tons in weight, was lifted at

the Nitschill Works by only fourteen pounds of powder.

Large models of the Coliseum and the Pantheon, formed of Dr. Braun's new material, are now leaving Rome for the Crystal Palace.

Zinc has been lately consecrated by being used as the material for an altar-piece at Cardiff.

The crowned heads of Germany do not forget to honour Art by presenting artists with marks of distinction, not thinking them sufficiently rewarded by the occasional purchase of their works. The Empress Elizabeth of Austria has sent a brilliant ring to Herr Auterberger, of Munich, the publisher of a beautiful engraving of Perugino's ‘Entombment.’

In America, invention is a trade. A Yankee genius has discovered, say the American papers, a means of turning glass at a trifling cost into a substance resembling marble, both in appearance and durability.

From Paris we learn that the Academy of the Beaux-Arts on Saturday last appointed M. A. Thomas its President, and M. H. Lemaire its Vice-President.

We have just received a copy of the Annual Report of the School of Art at Waterford, which shows it to be progressing satisfactorily. This was the first school established in Ireland upon the self-supporting principles introduced by the Department of Practical Art, and the Report refers to the third year of the experiment. It was prophesied that this experiment *must* fail, and especially in Ireland, but the event has proved quite the contrary. The fees paid by the students during the past year have realized as much as 170*l.*, and have nearly covered the expenses of the school. The master at Waterford receives under 20*l.* from the State in respect of his teaching, besides his share of fees; whilst the committee at Belfast, with nearly three times the population, received upwards of 600*l.* a year, but never was able to return above 150*l.* receipts from the students. Clonmel has recently established a successful self-supporting school, and Galway is projecting to do so. The school of Limerick, which is nearly under self-supporting management, has been much more flourishing than Cork under the old system. That of Dublin has been recently re-organized.

A Correspondent, writing from Florence, gives us some notes on the studio of Mr. Hiram Powers. —Perhaps it is not generally known that, unlike all his brethren in the profession, he never models in clay, which he says shrinks or swells at times; instead of which, he at once prepares his conceptions in plaster. The advantages are, that he gives fixity and permanency to his idea, and can take to pieces the individual parts for more accurate study and examination. The great difficulty to be surmounted was the impossibility of getting a highly finished and smooth surface with the instruments already known to the profession. He has, therefore, invented a machine for making open files, and has taken out a patent for it in America. The open file, which he showed me, is applicable also to copper and lead, and by means of this he manages to give to his cast the most polished surface. Whilst no one in modern times has adopted this mode of working, John of Bologna was the only one in the past who ever made plaster a substitute for clay,—and that only in a very rough manner. Mr. Powers, on the contrary, and by means of his open file, renders his cast as perfect as it can be rendered. The first work which he showed me, still in an unfinished state, is ‘America,’ a colossal statue. She is represented by a female figure, the expression of whose face is beautiful and dignified. Thirteen stars form the coronet on her brow. Her right hand rests on the fasces, which are covered with laurels, indicative of the triumph which always waits upon union. The left hand points to Heaven, expressive of dependence on it,—or, as an American gentleman present said, of a desire to follow the will of Providence in any further annexations she may be called upon to make. The left foot is to be trampling on chains,—but the Negroes who wear them in “the land of freedom” are not, I fear, to be represented. The drapery, which hangs easily and gracefully on the figure, is supported by a band over the left shoulder.

This statue has not been ordered. The same may be said of his 'California,' on which he is slowly at work, and which promises to realize the conception of the sculptor. It is altogether of a different character from the last. 'California' is represented by an Indian woman, and her face bespeaks all the cunning of her race. Sly and cat-like, she is tempting the colonist on by her own personal charms, and by a quantity of quartz at her feet, to which she points with a divining-rod in her left hand. Her right hand, grasping thorns, she conceals behind her back, as if unwilling to let the unwary gold-searcher know the sufferings which await him. Round her head she wears a fillet of shells and pearls, the usual Indian coiffure; whilst her hair, which falls down behind in braids, is caught up by a porcupine fastening. In the figure as well as in the face the true Indian character is preserved; it is lithe and agile. "She can run you, sir," said Mr. Powers, "and that right swiftly. 'Penseroso,'" pointing to another statue in the course of execution, "could not." A half figure of 'Proserpine' is, I think, one of the most charming specimens of ideal beauty I ever saw. The expression of the face is only too loveable; and looking on it, I can readily understand the possibility of conceiving a passion for statuary. She has a wreath of corn in bloom around her head; and around her waist is an acanthus wreath, emblematic of Pluto and the infernal regions, whence she is rising to spend six months on earth. It is remarkable that for this piece of sculpture Mr. Powers had no model; "and when I have one," said he, "I never detain it more than twenty minutes,—observe it,—and take hints; to keep it longer confuses me. I fear to be a copyist." This statue is a commission for Mr. King, whose bust, close by, is doubtless like him, and is well executed. Several repetitions of the 'Greek Slave' and of 'Proserpine,' as yet unfinished, were placed about the studio, which was surrounded by casts of all the great American statesmen. One of the most beautiful works that Mr. Powers has now in hand is his 'Penseroso,' on which he seems to labour *con amore*. The subject is taken from Milton, whose idea he has endeavoured, and successfully, to embody. There is a silent dignity in the expression, which becomes the—

Goddess sage and holy,
.....Divinest Melancholy;—

whilst there is a concealed grief, which well describes the—

Pensive muse, devout and pure,
Sober, steadfast, and demure.

The face is raised to Heaven, her—

Looks commercing with the skies.

With the drapery he had some difficulties to encounter, as Milton represents her—

All in a robe of darkest grain,
Flowing with majestic train,—

impossible to be carried out in sculpture. Whilst, therefore, the train is permitted to fall even to the ground, it is then gathered up and held in front by one hand. The robe is fastened round the waist, whilst over the upper part of the body is thrown a mantle—

And sable stole of cypress lawn,
Over thy decent shoulders drawn.

Thus, whilst the spirit of the poet has been infused into the marble, no less attention has been paid to the details. This beautiful piece of sculpture, colossal in size, is a commission for Mr. Lennox, of New York.

MUSIC AND THE DRAMA

ST. MARTIN'S HALL.—Will be performed on WEDNESDAY, January 17, a NEW ORATORIO, the NATIVITY, by Mrs. Mounsey Bartholomew; and Beethoven's Mount of Olives, under the direction of Mr. John Hullah. Principal Vocalists.—Mrs. Endersohn, Miss Julia Bleaden, Miss Fanny Huddart, Miss Palmer; Mr. Allen, Mr. Montem Smith, Mr. Henry Buckland, Mr. Weiss. Tickets, 1s., 2s. 6d., and 5s., may be had of the Music-sellers, and at St. Martin's Hall. Commence at Seven o'clock.

PHILHARMONIC CONCERTS.—When the list of Philharmonic Directors elected for this season was made known [*Athen.* No. 1395] we remarked, that it could be in no respect accepted as representing the state of music in London. There was small hope that progress could be insured, or even the success of past seasons maintained under such governance,

—small chance of enterprise in the selection of new music,—or of reforms calculated to insure year by year a more perfect execution of classical masterpieces, supposing these sufficient to keep together a conservative public. Under the best of circumstances, days so barren of great composers as ours must be days of difficulty for all artistic establishments—days demanding no common knowledge, vigilance, unselfishness from directing performers or performing directors, from composers who would be conductors, from conductors who would be composers, from residents or strangers. We now learn that the Philharmonic Directory for 1855 has one bad chance the more to overcome, besides those already indicated as belonging to our times and implied in its construction. Signor Costa has declined to conduct the orchestra this season. The loss is a heavy one, let his successor be who he will; since, whatever may be said or felt concerning certain peculiarities of his reading, there can be no question that Signor Costa has exhibited and carried out a discipline over English forces which has been reached by no predecessor; no question as to his power of obtaining greater results, without vexatiously harassing his band, from a given amount of rehearsal than any contemporary. Nor must it be forgotten that Signor Costa's influence brought about that important and salutary measure—the exclusion of the public from the Philharmonic rehearsals, thus rendering possible such correction as under the old system no conductor could have ventured to enforce, and no English orchestra would have endured. With the causes which have led to Signor Costa's secession, it is no affair of ours to deal. There is now that opening for a newcomer for which so many have longed. The man who can avail himself of it so as to maintain the Philharmonic performances at their present excellence, still more to improve them, will, indeed, merit well of all who care for the best music;—since rarely has minister taken office under circumstances of greater difficulty.

DRURY LANE.—An old drama, by Mr. Planché, taken from the French, entitled 'The Regent,' was reproduced on Monday with success. Mr. Meade and Miss Marriott performed the parts formerly supported by Mr. Ward and Miss Somerville, the singer. The scenery of the piece admits of pictorial display, and the intrigue of the plot succeeded in amusing the audience, which was numerous and good humoured.

ADELPHI.—The theatres are now beginning, by revivals, reproductions and other means, to strengthen the attractions of their Christmas burlesques and pantomimes. At this house, resort has been had to 'The Mysterious Stranger,'—i. e., Mr. C. Selby's version of the drama by MM. Clairville and Damarin, entitled 'Satan'; such being the part played by the heroine as the medium of a series of disguises, supernaturally induced, and assumed as expedients for the deliverance of the object of her affections from the dangers by which he is unconsciously surrounded. In such a part Madame Celeste was sure to find herself at home; and, assisted by Mr. Leigh Murray, Mr. Keely and Miss Wyndham, the revived piece was well received by a crowded audience.

SADLER'S WELLS.—Lord Byron's tragedy of 'Werner' has been revived at this theatre with a new cast, by which the effect of the drama has been somewhat improved. Mr. Phelps enacts the sickly hero with a sufficient sense of the miserable—though not with the intensity of wretchedness imparted to it by its original representative. The tone of the performance is more masculine and healthy; the morbid is, however, doubtless the poetic element in which the character is conceived. Though unpleasant enough in itself, it is relieved by the manlier attributes of the accessory parts, such as *Ulric* and *Gabor*. Both these had new representatives. The former was gracefully and vigorously impersonated by Mr. Robinson, who gave to some of the points an unusual subtlety, indicative of a growing intelligence in the actor that deserves recognition. The latter was interpreted with a rough

and appropriate sort of energy by Mr. Marston, accompanied with an elegance of action which formed an appreciable contrast of opposite elements artistically harmonized. To Mr. Ray, for his capital realization of the servile and rapacious intendant, more than ordinary commendation is due. This laborious and meritorious actor is, in such parts, always excellent,—a modest line to which praise is not often awarded. Such an actor as Mr. Ray often goes through life doing commendable things, being in his way unparalleled, without a word of public encouragement. This ought not to be.—On Wednesday the tragedy of 'Pericles' was reproduced, with the design, apparently, of being continued on the bills again for some time to come. The cast remains unaltered.

MUSICAL AND DRAMATIC GOSSIP.—The adage, "Opportunity neglected commonly brings repentance," is one of those pieces of ancestral wisdom which, it might be thought, every English man, woman and child had at his and her fingers' ends, so largely does it figure in the writing-master's collection of copy-heads. Yet some of our singers have either never learnt "round-hand," or practically disregard that which they have transcribed. We were led thus to moralize the other evening in a place where not many moralize—the promenade at M. Jullien's Concert. The sudden hoarseness of Madame Thillon made the engagement of some substitute necessary. This was supplied by the two ladies on whose self-advertisement as "fascinating duettists" we not long since commented. Had they practised more and advertised less, so golden an opportunity might have established them beyond the need of advertisement. Their voices are good, and possess that family likeness which is one element of perfection in duett singing. Nor is there any reason why they might not already have taken the place vacant in our concert programmes since the marriage of Miss A. Williams. Nothing is more grateful to the ear than a perfectly prepared duett of female voices,—and the store of music, old and new, within its command is large and various. We throw out these remarks not to annoy so much as to assist. What says another "copy-head"? "Nothing is denied to well-directed labour."—M. Jullien's 'Mendelssohn's Night' fell on Tuesday last. To hear the Pianoforte *Concerto* in G minor and the Violin *Concerto*, rendered by Madame Pleyel and Herr Ernst, must be a great pleasure to any one—how much more to a shilling audience whose opportunities of hearing such music, till of late, were so few. This is the good side of M. Jullien's efforts, which may be fairly set against much nonsense and quackery. We know how audiences change,—we know that English audiences harden themselves against strange music with Russian perversity. We know how much that calls itself new is merely old—of the worst quality. But is there not danger of Mendelssohn's music being outworn in this country?—The influence on taste resulting thence would be as bad as that arising from indifference.

There seems to be no stint nor war-allowance of winter pleasures in preparation for the solace and diversion of those who, like Queen Elizabeth when she took to her virginals, would shun melancholy. Mrs. Fanny Kemble's readings, commenced anew, are among the most welcome of these entertainments. This year, she seems addressing a larger audience than any invited in former seasons: since a reading of 'A Midsummer Night's Dream' is announced as about to take place in Exeter Hall. It will be accompanied by Mendelssohn's music—conducted by M. Benedict.

The lyrical drama from the Greek, by Mr. H. Spicer, now preparing at the St. James's Theatre is on the subject of *Alcestes*:—the best, perhaps,—at least the most touching—of the tragedies of Euripides. The heroine will be supported by Miss Vandenhoff. Some of the choral music of Gluck's opera is to be introduced on the occasion. We are sorry for this: such proceedings being at variance with the taste and knowledge of the times in which we are living.—Mr. Whitworth,—who has been lately singing in South America, unless we

are mistaken,—is mentioned as the *basso* engaged at Drury Lane, to fill the part of *Peter*, in M. Meyerbeer's 'L'Étoile.'

Here is a bit of good news for English managers and dramatists:—the Paris theatres have produced during the past year no less than 255 original pieces. Of these new works, 17 are operas, 17 comedies, 2 ballets, 2 dramas and 1 tragedy. The rest are *vaudevilles*. Such, we infer from our experience, are the dramatic prospects of London in the year now opening.

This evening a new drama is performed at the *Princess's*,—of course from the French—being a translation of M. Casimir Delavigne's historical tragedy of 'Louis XI.'

Galignani's Messenger announces that 'Il Trovatore' is to be produced, early in the season, at our *Royal Italian Opera*, and that Madame Borghini-Mamo, Signors Graziani and Baucardé have been engaged by Mr. Gye to appear in the parts sustained by them in Paris. The journals, we observe, are already beginning to speak of the success of the work as "contested."—There is no adverting to the *Grand Opéra* at Paris under its present Imperial mismanagement without having the appearance of making sport of our readers. Now we are told that Madame Stoltz has "unquarrelled her quarrel"—taken back her resignation, and started fresh on a new engagement—always in the old 'Favorite.' Signor Neri-Baraldi appeared on the occasion as *Fernand* to her *Leonore*. According to the *Gazette Musicale*, this gentleman is weak as a singer—null as an actor. He was called for, with all the honours, at the end of his performance. All this miserable work is made doubly miserable by the fact, that the French Opera is one of the few centres of creative music left in Europe; and, as such, an object of more than ordinary interest to all musicians.—The oratorio of M. Berlioz will be performed, for the third time at Paris, towards the close of the month.—Having adverted to this work, we may here correct a misprint in the *Athenæum* of Saturday last. The third part in the new trilogy is the 'Arrival at Sais.'—At the Concert in question, M. Berlioz will also bring forward a *Cantata* for two choirs and orchestra.

A caricature may help to fix a fact. We are obliged to a reader of the *Athenæum* for recalling to us a certain exaggerated *feuilleton* by M. Jules Janin—written in the days when he was not given to complimenting Mdlle. Rachel, and among other gracious figures of speech, likening her *Athalie* to a spider. The great tragic actress, then, did appear in Racine's tragedy: though, our friend adds, only a few times.

Private letters and printed corroborations which have been forwarded to us since we wrote last, tend to confirm our impression that the prospectus of the *New Philharmonic Society* is not satisfactory,—and that the case is one in which a private speculation, hitherto unsuccessful, seeks for strength by associating itself with a certain portion of an unsuccessful Society,—and in which the two-in-one, unable to go alone and mistrustful of their powers in combination, are endeavouring to hang themselves on the charities of London, with a view of establishing their existence and assuming an importance in the eyes of the public. One Correspondent calls attention to communications lately addressed by M. Benedict to the *Musical World*,—from which it appears, that the accounts of the *Harmonic Union* are still unsettled,—arguing from such facts, that the defunct or divided Society in question was a failure; and hence, that the assurance of "financial prosperity" so confidently based on its incorporation with Dr. Wylde's Society, is merely a structure on sand.—Another, carries our question regarding the magnificent list of Patrons and Patronesses a step further, by asking how far, though their charities are to profit by Dr. Wylde's gains, the charitable patrons would secure to Dr. Wylde the power of paying his artists—supposing the result of his Concerts to be loss, not profit?—A third makes a statement, which we are able to corroborate, to the effect that M. Berlioz is only engaged for two out of the six Concerts,—and will, probably, only

take up the *bâton* at the last two of the series,—and asks, what has become of Herr Lindpaintner's engagement? In brief, the further we examine the more satisfied are we that the position and prospects of the *New Philharmonic Society* have not been frankly stated. Let Dr. Wylde—as Salaman did in the days of Haydn—announce his series of Subscription Concerts,—let him hand over the profits to the Needlewomen, or the Idiots, or the Consumptives, as best pleases his benevolence,—and the transaction becomes simple, and its issue will claim and obtain due approval. But, as the matter stands, there is something hybrid, mysterious and delusive in his attempts to bring himself forward by conjuring round himself the appearance of "a company," and by resorting to the bell and the clap-dish of the mendicant, in order to get a sympathy and a congregation. Both devices are unworthy of an artist, however in accordance they be with the practices of a Barnum,—and, therefore, for the sake of Art, is it necessary clearly to explain to the public the real nature of the thing,—by whom it is founded,—and for what purpose.

Herr Reilstab, the Prussian critic, has addressed to the *Gazette Musicale* a New Year's summary of the music which has been performed at Berlin during the winter. The revival of Signor Rossini's 'Tancredi' is described by him as having been thoroughly successful,—thanks, in no small part, "to the potent magic" of Mdlle. Wagner's acting. The principal German operas performed have been the 'Nibelungen' of Herr Dom, and Weber's 'Oberon,' which has been revived with great care and splendour. Herr Reilstab speaks in high praise of a pianoforte *trio*, by Herr Kiehl—a new composer. M. Fétis is elaborately laudatory of a new "method of violin-playing," just put forth by M. Meerts, a Professor at the Brussels Conservatory. In this, M. Fétis assures us, all the requisitions of modern art and discovery have been provided for.

MISCELLANEA

The Queen's University in Ireland.—The report on the condition and progress of this institution, from September, 1853, to August, 1854, has been presented to both Houses of Parliament, by command of Her Majesty. The examinations for 1853 commenced on the 20th of September, and were mainly conducted by printed papers. Of those who presented themselves for examination for degrees, diplomas, and honours, eight were rejected. It has been decided that the rejection of a candidate by any one examiner is fatal, and cannot be overruled by a majority of the rest. The Senate has not yet been able to arrive at any conclusion as to the expediency or propriety of making any modifications in the course of education now prescribed, as suggested by a Committee of non-subscribing Presbyterians and the Professors of the Queen's College. *Ad eundem* degrees will be conferred, but the greatest care is to be exercised in so doing. The examination for the B.A. degree, includes Latin and Greek, modern languages and English literature, mathematics, logic, metaphysics, chemistry, natural philosophy, zoology and botany, physical geography, jurisprudence, and political economy. In October, 1853, 9 persons obtained degrees of M.D., 11 degrees of M.A., 25 degrees of B.A., 1 a degree of LL.B., and 2 diplomas of law and agriculture; 33 persons obtained honours in the various departments of study.

The Price of Australian Newspapers.—The proprietors of the *Sydney Morning Herald*, the *Sydney Empire*, the *Melbourne Argus*, and other Australian newspapers have increased the price of their respective journals from 3d. to 6d. per copy. The grounds put forth are their enhanced superiority as journals, and the consequently augmented cost of production. The new tariff came into operation in September last. The *Ballarat Times*, a very small paper, the *Mount Alexander Mail*, and others at the diggings, have for some time past been published at 1s.

TO CORRESPONDENTS.—J. M.—G. G.—W. N. G.—J.—E. H. B.—W. B.—W. B. K.—K.—J. H.—received.

NATURAL HISTORY.

I.
LITERARY PAPERS by the late PROFESSOR EDWARD FORBES, F.R.S. Selected from his Writings in 'The Literary Gazette.' With a Portrait and Memoir of his Life. Price 5s. [Now ready.]

CONTENTS.

1. Life-Development, Geology and Religion.
2. Turkey and the East.
3. England and her surveying Expeditions.
4. The Blunders of Pseudo-Philosophers.
5. Whalermen and the Whale.
6. The British Museum and its Wonders.
7. Science and Sport in Scandinavia.
8. Sketches of Travel in America.
9. Himalaya and the Tea Countries.

New French Reading Book, Prose and Poetry, 'Leçons Françaises

de LITTÉRATURE et de MORALE, en Prose et en Vers; ou, Nouveau Recueil de Morceaux, Extraits des meilleurs Auteurs.
"The selection has been made with taste and judgment, as well as with a scrupulous care to exclude everything likely to injure the morals of the pupil."—*Athenæum*.

Fifth Thousand, 12mo. price 5s. The

Historical Class Book; Readings

in UNIVERSAL MODERN HISTORY, Chronological and Biographical, from the Reformation to the Present Time, including the French Revolution of 1818, and the Sulej Campaign, with Notices of the most remarkable Inventions and Discoveries, and Chronological Tables of Contemporary Sovereigns. By JOHN DAVENPORT, Joint Editor of Petronj and Davenport's 'Italian Dictionary.'

Third Edition, 12mo. price 2s.

White's First Greek Lessons.

A Course of Study, so arranged as to require no previous study of the Grammar. By CHARLES WHITE, M.A. Cambridge. Each Lesson is preceded by a Vocabulary, and a copious Index Verborum is printed at the end of the volume.

Second Edition, 12mo. price 7s., 153 Woodcuts.

Land Surveying for Schools.

With Short and Easy Explanatory Rules. By JOHN QUESTED, Surveyor.

By the same Author, price 2s. 6d.

THE SCHOOL BOY'S STEPS to the MATHEMATICS.

Greek Writing Copies.

Twenty-four Greek Sentences (corresponding to the Alphabet), beautifully engraved by H. D. SMITH, the Engraver of various school Copy Slips, under the superintendence of the late Rev. T. MEYLER, M.A., Head Master of the Marlborough Grammar School. Price 1s. the Set.

Emblematical Map of England.

In which the Productive Resources of England and Wales are indicated, each by its appropriate Emblem figured on the locality where it most abounds. By J. KENTISH. Coloured and mounted on canvas with Roller, price 8s. 6d., including a copious explanatory Key.

The object in preparing this Map has been to impress upon the mind of the learner, through the eye, a general acquaintance with the Productions, Manufactures, and Resources of his native country. Everything, in fact, connected with the Home Resources and Greatness of our Country is put prominently before the eye, and that too in a form calculated at once to fix itself indelibly on the memory by a process at once pleasing and simple.

Relfe's Numerical Report Book—For Boys' Schools.

Containing in each page a Weekly Report of every variety of Scholastic Exercise, on a plan affording either to Parent or Tutor a permanent record of the application of the Pupil. Price 1s.

Relfe's Numerical Report Book—For Young Ladies' Schools.

On the plan of the above, but adapted to the Scholastic pursuits of Young Ladies. Price 1s.

Merry Sparks for a Winter Hearth. Containing Mrs. Colwell's Christmas Party; That—Miss Daw; All about a Cabbage; and the Ghost of a Wooden Leg. By FANNY ELIZA LACY, Author of 'The Visitor in Grey,' &c. Dedicated by permission to ALBERT SMITH. "Cheerful, simple, humorous."—*Athenæum*. In ornamental boards, price 1s.

III.
The Planetary Worlds. The Topography and Telescopic Appearances of the Sun, Planets, Moon, and Comets. By JAMES BREEN, of the Cambridge Observatory. "A volume small in its dimensions, and unpretending in its style, but truly valuable as a correct and careful repertoire of astronomical facts."—*Irishman*. "A very lucid and interesting summary A useful, and at the same time a thoroughly readable book."—*Quarterly*. "A trustworthy work like the present will be found most acceptable at the present time."—*Press*. "The facts deduced, the phenomena observed, the speculations in which ingenious minds have indulged, are clearly and succinctly exhibited by Mr. Breen, without sinking the character of the astronomer in the mere popular writer."—*Spectator*. Demy 12mo. cloth, with numerous illustrations, price 5s.

IV.
The Volunteer Rifleman and the Rifle. By JOHN BOUCHER, formerly of the 5th Dragoon Guards and North British Rifles.

"It is full of practical directions."—*Leader*. "The volume is full of useful instructions, practical directions, and plain facts, and contains much good advice."—*Press*. "A small volume of practical instructions. Mr. Boucher's instructions are clear and likely to be understood."—*Athenæum*. "His book is an excellent companion for the rifleman."—*Naval and Military Gazette*.

"We have no doubt that a careful study of the general principles and plain instructions laid down by Mr. Boucher in this work, will enable any one, with an ordinary share of practice, to become an expert rifleman and a good shot."—*Observer*. Demy 12mo. cloth, price 4s. 6d.

V.
Poems. By Melancton. "The author displays no small amount of poetic fancy wedded to a delicate and well-cultured ear; while in not a few the affluence is of true inspiration."—*Liverpool Standard*. "They are the work of a man of power and much poetical feeling."—*Guardian*. Demy 8vo. cloth, price 4s.

VI.
Hardwicke's Shilling Peerage for 1855; containing an Alphabetical List of the House of Lords, together with the date of the Creation of each title; the Birth, Accession, and Marriage of each Peer, his Heir apparent or presumptive, Family name, Political bias and patronage; as also, a brief Notice of the Offices which he has hitherto held; his Town Address and Country Residence; and tracing each Title genealogically back to the commencement of the present century; with a complete List of the Scotch and Irish Peers, Temporal and Spiritual, who are not Members of the House of Lords; of Peersesses in their own right; and of the late and present Ministry. Compiled by EDWARD WALFORD, Esq. M.A. Royal 32mo. cloth, gilt edges.

VII.

PART ONE of a New Issue of the LIFE OF NAPOLEON THE FIRST.

By SIR WALTER SCOTT.

TO BE COMPLETED IN NINE FORTNIGHTLY PARTS.

"What could now be more delightful to me than leisurely and calmly to sit down and listen to the discourse of such a man, while clearly, truly, and with all the skill of a great artist, he recalls to me the incidents on which through life I have meditated, and the influence of which is still daily in operation?"—*Goethe*.

ADAM & CHARLES BLACK, Edinburgh. HOULSTON & STONEMAN, London.

NEW WORK BY FANNY FERN.

Just ready, price 2s. with a Frontispiece and Title by BIRKET FOSTER,

RUTH HALL:

A DOMESTIC STORY OF THE PRESENT DAY.

By FANNY FERN.

"This story is exciting great interest here, being Fanny Fern's first attempt at a long story. It is also thought by some to be the story of her own early life. Some of the scenes are delineated with touching pathos,—others display the vigorous flashes of satire so natural to her when vice or meanness fall under her lash."—*New York Correspondent*.

London: HOULSTON & STONEMAN, 65, Paternoster-row; and WM. S. ORR & Co. Amen-corner.

John Murray, Albemarle-street.

Just published, Vol. VII. for 1854, containing 616 pages of closely printed matter relative to the Mind in Health and Disease, of

THE PSYCHOLOGICAL JOURNAL.

By FORBES WINSLOW, M.D. D.C.L.

"It will extend our knowledge of the true pathology of the brain, and give us comprehensive notions of the treatment of insanity. If the unhappy portion of our fellow creatures, whose incarceration Dr. Winslow has so much at heart, could give expression to their feelings of gratitude for his able exertions to promote humane and enlightened views of their condition, we can easily conceive in what terms they would convey to him their sentiments of respect and admiration."—*The Lancet*.

No. XXIX. of the PSYCHOLOGICAL JOURNAL (for January is just published.

London: J. Churchill, New Burlington-street.

PHILOSOPHY at the FOOT of the CROSS.

By AMELIA AUGUSTA ST. JOHN, Author of *Isis*, &c.
"Poetical in form and religious in spirit, bright in style and mystical in substance,—such in general terms is this new work from the Author of *Isis*. As years grow upon him, Mr. St. John's genius seems to ripen like a strong southern wine."
Athenæum.
London: Longman, Brown, Green, and Longmans.

Just published, in fcap. 8vo. price 7s. 6d.

POEMS. By WILLIAM STEPHEN SANDES.

"A volume of poems, on various subjects, of a very superior order. They are characterized by true feeling, scholarship, good taste, and a perfect appreciation of the Beautiful. The sonnets show a perfect mastery in this somewhat difficult department, and are rounded off with exquisite harmony, and with all the force of an epigram self-contained."—*Weekly Dispatch*.
London: Longman, Brown, Green, and Longmans.

Just published, in 8vo. price 25s. half-bound.

HAYDN'S BOOK OF DIGNITIES: Containing Rolls of the Official Personages of the British Empire, Civil, Ecclesiastical, Judicial, Military, Naval, and Municipal, from the Earliest Periods; compiled chiefly from the Records of the Public Offices. Together with the Sovereigns of Europe, from the Foundation of their respective States; the Peerage of England and of Great Britain; and numerous other Lists.

"The 'Book of Dignities' will become a necessary volume in all public offices, and will be found in most libraries a valuable book of reference, in affording information of a kind not elsewhere collected together, while it may be relied on as recent and authentic."—*Literary Gazette*.
London: Longman, Brown, Green, and Longmans.

Just published, price 5s.

Le Page's French Prompter;

with a KEY to PARISIAN PRONUNCIATION: a COMPLETE HAND-BOOK OF CONVERSATION, Alphabetically arranged, so as to obviate all difficulty of reference; forming at once a perfect English and French Dictionary, and a complete Manual of Conversation, as it gives at each word all the phrases relating to it which are heard daily in polite families.

"The 'French Prompter' is all that it professes to be, a complete Hand-book of Conversation, for the use of Families, Travellers, Teachers, and Students."—*Morning Herald*.
Fifth Edition, in a neat pocket volume, price 5s. bound; or post free on receipt of 60 stamps.

Le Page's Juvenile Treasury of FRENCH CONVERSATION. With the English before the French. Now first published. Price 3s.

Le Page's Finishing Exercises in FRENCH CONVERSATION; being a KEY to 'L'ÉCHO DE PARIS.' Now first published. Price 1s. 6d.

Le Page's French Master for BEGINNERS; or, EASY LESSONS IN FRENCH, for Juvenile Pupils. New Edition, with additional price 3s.

"M. Le Page's tabulation of the verbs is as complete as it is good; his Syntax is lucid and scholar-like; and his Exercises are well graduated, and likely to exercise the student's mind with his memory."—*Gentleman's Magazine*.

Le Page's L'Écho de Paris; being a SELECTION OF PHRASES a person would hear daily if living in France. With a Vocabulary of the Words and Idioms. 22nd Edition. Price 4s. neatly bound.

Le Page's Gift of Fluency in FRENCH CONVERSATION: a SET OF EXERCISES for the LEARNER OF THE FRENCH LANGUAGE, calculated to enable him, by means of practice, to express himself fluently on the ordinary topics of life. 10th Edition, with Notes, price 3s. neatly bound.

Le Page's Last Step to French; or, THE PRINCIPLES OF FRENCH GRAMMAR DISPLAYED, in a SERIES OF SHORT LESSONS, each of which is followed by Questions as Exercises, with the Verification.

"In the 'Last Step to French' we have a grammar superior, in our opinion, to any that has preceded it. It is the first work of M. Le Page which is a complete library for the student in French, and at the same time a manual of conversation, enabling him at once to learn and to speak the language."—*Parthenon*.
Eighth Edition, price 3s. neatly bound.

Le Page's French School; comprising 'L'Écho de Paris,' 'Gift of Conversation,' and 'Last Step to French.' The Three Parts bound in One Volume, price, in cloth, 10s.

"To all who desire to speak French with facility, we commend the study of the three Parts and the 'Ready Guide to Composition.'"
—*Morning Herald*.

Le Petit Causeur; being a KEY to the GIFT OF FRENCH CONVERSATION. The Key gives the correct translation of the same into French, thereby showing which is the proper expression for every topic of life. Price Eighteenpence, sewed.

Le Page's Ready Guide to French COMPOSITION. FRENCH GRAMMAR by EXAMPLES; giving Models as Leading-strings throughout Accidence and Syntax, and presenting a comparative view of the English and French Idioms in their principal differences. Second Edition. In 1 vol. 12mo. price 4s. neatly bound.

Le Page's Petit Musée de Littérature FRANÇAISE. ELEGANT EXTRACTS from the most EMINENT WRITERS OF FRANCE, in PROSE and VERSE, selected with an especial regard to Morality and Religion. With Chronological and Critical Notices of French Literature.

"The extracts are from the great writers, and are well chosen; the book forms a very neat volume, and contains a large quantity of most entertaining matter."—*Spectator*.

In 1 vol. 12mo. handsomely bound, price 5s. 6d.; or elegantly bound in calf extra, adapted for a present or prize-book, price 9s.

LE PAGE'S NICETIES OF PARISIAN PRONUNCIATION.

London: Henry Lea, 22, Warwick-lane, Paternoster-row.

EVANGELICAL CHRISTENDOM.—This
valuable periodical has now been in existence upwards of
eight years, during which its pages have been enriched by
articles from the most distinguished British and Continental
writers. It gives information, derived from original sources, from
all parts of the world, especially from the various nations of Con-
tinental Europe. To the friends of the Evangelical Alliance it is
especially interesting, as recording its proceedings and meetings.
As an advertising medium it is of great value, enjoying a wide cir-
culation among the most select and book-buying of the commu-
nity, at home and on the Continent; and being sent in addition to
nearly 500 Missionaries in all parts of the world.—Posted monthly
to any address for 6s. 6d. per annum, or a specimen number for six
pennies.

London: Partridge, Oakley & Co. Paternoster-row.

In the press, a New Edition, with German Translation, of
SONGS for the SEASONS on MELODIES
of BEETHOVEN.

Organist to the Hon. Soc. of Lincoln's Inn.

This Grammar is compiled on an entirely new and original
plan, affording peculiar facilities for the acquisition and thorough
knowledge of the language.

Just published, in crown 8vo. price 7s. 6d. cloth,
BALDER.

By the AUTHOR of 'THE ROMAN.'

Second Edition, with Preface.

"In this poem we read a magnificent protest against the ten-
dency of our age to materialism and positive philosophy and the
apotheosis of mechanism and intellect. An age which everywhere
manifests a blind atheistical dedication of force and power. The
age to which we all others that trumpet long the text, 'What shall
I be a man if he save the whole world and lose his own soul?'
needs to be preached and sung. There are two hundred and
eighty-three pages in this book, and not one but contains fine
thoughts, magnificent imagery, striking similes, or searching re-
flections. Of the wealth of thought revealed we can scarcely trust
ourselves to speak, it is so great. We consider 'Balder' to be the
first and worthy part of a great poem—one of such a degree of
greatness, that it has scarce an equal in our century, and one that
will take the public opinion some years to arrive at that greatness.
To those who cannot see its purpose, we may say, as the old chro-
nicles wrote of Shakespeare.—'Read it again and again, and if so
be you do not understand it then, there is manifest danger that
you are not quick of comprehension.'—*Eclectic Review*.

"Genius is so unmistakably present in every page of the strange
book before us, that to give examples from one, without injustice
to the others, we find to be beyond possibility in the limits of a
magazine review. We cannot, however, resist a passing allusion to
the absence of all melo-drama in those scenes which nevertheless
reach the very bounds of the dramatic, and to the instinctive
avoidance of the horrible and attainment of the terrible, under
circumstances of the highest tragedy. These general facts infer a
quality of intuition in the author, which only the true critic can
properly estimate; and in such passages as the portrait of Amy in
scene twenty-eight, and the *phoc* of scene thirty-seven, or scene
twenty-four, he will recognize the same wonderful truth of instinct
at work, in the calmest nooks and most pastoral quietudes of the
many-coloured landscape of life."—*Fraser's Magazine*.

"The lesson to be taught would make a grand theme for
poetry, but only a crowned singer could hope to teach it. Let
some large and wealthy mind study the darker possibilities of his
own being—the question may be neatly handled. Some such
denizen of Parnassus—understanding by experience the peculiar
temptations of high poetic temperament—knowing well all those
airy illusive tongues that 'slyable men's names' in the haunted
wilderness of aspiration—looking steadily down that wrong turn-
ing, the gloomy avenue of *thou uti mala* he himself *might* have
chosen—such an one could address his brethren in that of us, with
happiest effect. Qualifications adequate to an enterprise so worthy,
Mr. Vendys unquestionably possesses; to some such purpose he
appears to have devoted himself in the present poem, and, in our
judgment, with signal success."—*British Quarterly Review*.

Recently published, in post 8vo. price 5s. cloth,

THE ROMAN.

By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we
have a new poet amongst us, we should almost despair of his con-
version. But we should not abandon the attempt while we had
such an argument in reserve as the ensuing description of the
Coliseum."—*Illustration*.

"How far the merit corresponds with the magnitude of the
work there may be some difference of opinion, but none as to the
genius and power of the author."—*Literary Gazette*.

"Any man might be proud to be the author of this poem, which,
if the first production of an author hitherto unknown, is full of the
richest promise; and at any rate shows that we have poets still
among us, who, if they would but take equal pains with our older
writers, are capable of achievements not any way inferior to
theirs."—*Guardian*.

"The hand that has struck this lyre is the hand of a master."

SMITH, ELDER & CO. 65, Cornhill.

Just published,

PHOTOGRAPHIC CAMERAS.

**OTTEWILL & MORGAN'S MANU-
FACTORY**, 24 and 25, Charlotte-terrace, Caledonian-road,
Islington.—OTTEWILL'S REGISTERED DOUBLE-BODY
FOLDING CAMERA, adapted for Landscapes or Portraits, may
be had of A. Ross, Featherstone-buildings, Holborn, Photographic
Institution, Bond-street, and at the Manufactory as above; where
every description of Cameras, Slides, and Tripods may be had.—
The Trade supplied.

**ROSS'S PHOTOGRAPHIC PORTRAIT and
LANDSCAPE LENSES.**—These Lenses give correct defi-
nition at the centre and margin of the picture, and have their
visual and chemical acting force coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest
intensity yet produced, by procuring the coincidence of the chemi-
cal, actinic and visual rays. The spherical aberration is also very
carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It
is furnished with a double achromatic objective lens, about 3 inches
in aperture. There is no stop, the field is flat, and the image very
perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

COLLODION PORTRAITS and VIEWS,
obtained with the greatest ease and certainty, by using
BLAND & LONG'S preparation of SOLUBLE COTTON. Cer-
tainty of uniformity of action over a lengthened period, combined
with the most faithful rendering of the half-tones, constitute this
a most valuable agent in the hands of the Photographer.

Albumenized Paper, for printing from glass and paper negatives.
5s. per quire.

Waxed and Iodized Papers of tried quality.

Instruction in the processes.

BLAND & LONG, Opticians and Photographical Instrument
Makers, and Operative Chemists, 153, Fleet-street, London.

*** Catalogues sent upon application.

THE IODIZED COLLODION, manufactured
by J. B. HOOKIN, CO. 259, STRAND, LONDON, still
remains unrivalled for sensitiveness and density of Negative—it
excels all others in its keeping qualities and uniformity of constitu-
tion.—Albumenized Paper, 17s. 11s. per quire; Waxed ditto,
7s. of very superior quality.—Double Achromatic Lenses, equal in
all points to those of any other manufacturer: Quarter Plate,
2s. 2d.; Half Plate, 5s.; Whole, 10s.—Apparatus and pure Chemi-
cals of all descriptions.

Just published, 'PRACTICAL HINTS on PHOTOGRAPHY,'
by J. B. HOOKIN. 3rd edition, price 1s.; per post, 1s. 4d.

XYLO-IODIDE of SILVER, exclusively used
at all the Photographic Establishments.—The superiority
of this preparation is now universally acknowledged. Testimo-
nials from the best Photographers and principal scientific men of
the day, warrant the assertion, that hitherto no preparation has
been discovered which produces uniformly such perfect pictures,
combined with the greatest rapidity of action. In all cases where
a quantity is required, the two solutions may be had at Wholesale
price in separate Bottles, in which state it may be kept for years,
and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my
name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to
counterfeit which is felony.

**CYANOGEN SOAP, for REMOVING all kinds
of PHOTOGRAPHIC STAINS.** The genuine is made only by the
inventor, and is secured with a red label bearing this signature
and address, RICHARD W. THOMAS, CHEMIST, 10, PALL
MALL, Manufacturer of pure Photographic Chemicals; and may
be procured of all respectable Chemists, in Pots, at 14s., 2s., and
3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-
yard; and Messrs. Barclay & Co. 35, Farringdon-street, Wholesale
Agents.

ESTABLISHED 1838.

On a Policy for 1,000*l.*, dated 1st March, 1832.
1,523*l.* 6*s.* will be payable if it become a claim during the current year, after payment of this year's Premium. This is an addition of more than Fifty per cent. on the Sum Assured, and averages 22*l.* 3*s.* 7*d.* per cent. per annum.

Supposing such a Policy to have been effected at the age of Thirty, the additions might now be surrendered for a present payment of 22*l.* 7*s.* 10*d.* or if applied in reduction of the future Premium, would reduce the Premium from 35*l.* 10*s.* 10*d.* to 6*l.* 3*s.*; and even this small payment must be reduced every Three Years during the subsistence of the Policy.

AMOUNT OF EXISTING ASSURANCES.. £4,234,508
ANNUAL REVENUE..... 152,615
AMOUNT OF ACCUMULATED FUND..... 859,354
Copies of the Annual Report, Forms of Proposals, and all information may be had on application at any of the Society's Offices in Town or Country. W. COOK, Agent.
128, Bishopsgate-street, London.

THE WESTMINSTER AND GENERAL LIFE ASSURANCE ASSOCIATION.
At the Westminster Fire Office.
27, King-street, Covent-garden, London.
Established 1836.

Trustees.
George Dodd, Esq. Colonel W. H. Meyrick.
Joseph William Thrupp, Esq.

This Association offers to Assurers the security of an ample Guaranteed Capital, besides a large Fund invested in the Public Stocks and on Mortgages, being the accumulation of premiums already received on Assurances.

The rates of premium hereunder stated have been re-calculated, and are precisely adjusted to the risk of the Assurance undertaken by the Office, and are as low as is consistent with security.

Eight-tenths of the profits of the Association are divided every Five Years among the holders of Policies in the participating class of assurances.

The additions made to the sums assured by Policies which have participated in the three divisions of profit declared 1842, 1847, and 1852, have averaged one-half of the premiums paid on them.

The assured may proceed to and reside in any part of Europe, without giving notice to the Association, or paying any extra premium.

Every restrictive condition of assurance not absolutely necessary for the security of the Association has been withdrawn from the policies.

Loans advanced on the security of policies after two premiums have been paid on them.

Premiums may be paid Yearly, Half-yearly, or Quarterly.

Every information on the subject of Life Assurance can be obtained on application at the Office.

Annual Premiums for the Assurance of 100*l.*, for the whole term of Life:—

Physician—Dr. Jeaffreson, 3, Finsbury-square.

Surgeon—W. Coulson, Esq., 2, Frederick's-place, Old Jewry.

Consulting Actuary—Professor Hall, M.A. of King's College.

ADVANTAGES OF ASSURING WITH THIS COMPANY.

The premiums are on the lowest scale consistent with security.

The Assured are protected by an ample subscribed capital—an assurance fund of nearly 400,000*l.* invested on mortgage and in the Government stocks—and an income of 80,000*l.* a year.

Premiums to Assure £100.

60 3 2 4 3 17 0 6 12 9 6 0 10

Mutual Branch.

Assurers on the Bonus system are entitled, at the end of five years, and afterwards annually, to participate in four-fifths, or 80 per cent. of the profits.

The profit assigned to each Policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.

At the first division a return of 20 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 60 to 25 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit for seven years, or one-third of the Premium may remain for life as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid in one month after proofs have been approved.

Loans upon approved security.

No charge for Policy Stamp Duty.

Medical Attendants paid for their reports.

Persons may proceed to or reside in any part of Europe or British North America without extra charge.

The Medical Officers attend every day at Throgmorton-street, at a quarter before 2 o'clock. E. BATES, Resident Director.

F. BILL'S GENUINE INDIA CURRIE
POWDER, prepared from an original receipt, at his warehouse, 27, South Audley-street. This currie powder will be found to surpass all others introduced in this country: one trial will prove the assertion. Sold by Mr. Armstrong, 42, Old Bond-street; Messrs. Whittaker, 39, Piccadilly; Mr. Barlow, 5, Court-street; Mayfair; Mr. Brookfield, 61, Sloane-street; Mr. Pratt, 5, Southampton-court, Russell-square; and Messrs. Simpkins, 4, Alfred-terrace, Queen's-road, Bayswater.

RUPTURES.—BY ROYAL LETTERS PATENT.
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of steel springs, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to be forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer, Mr. WHITE, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c.
FOR VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price, from 7s. 6d. to 16s. each; postage 6d. MANUFACTURER, 228, PICCADILLY, LONDON.

DURABILITY OF GUTTA PERCHA
TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE OF WIGHT.—"Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning respecting the Durability of Gutta Percha Pump Service, I can state with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here." N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

F. DENT, 61, STRAND, and 34 and 35,
ROYAL EXCHANGE, Chronometer, Watch, and Clock Maker, by appointment, to the Queen and Prince Albert, sole Successor to the late E. J. Dent in all his patent rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical, Turret, and other Clocks, Dipleidoscopes, and Patent Ships' Compasses, used on board Her Majesty's Yacht, Ladies' Gold Watches, 8 guineas; Gentlemen's, 10 guineas. Strong Silver Lever Watches, 6s. 6d.

CHUBB'S LOCKS, with all the RECENT
IMPROVEMENTS; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete Lists of Sizes and Prices may be had on application.
CHUBB & SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley Fields, Wolverhampton.

MODERATOR LAMPS.—IMPROVED
PRINCIPLE.—For simplicity, strength and general finish, the LAMPS sold by THOMAS PEARCE & SON are far superior to any other kind. They are all made expressly for their house—are tried before they leave the Manufactory, and have important improvements peculiar to only these Lamps. The patterns are singularly uncommon and beautiful, and for art, elegance and good taste, the assortment is quite unexceptionable, many of the designs belonging exclusively to T. PEARCE & SON.
Direct Importers of Oil of the finest quality.
T. PEARCE & SON, 23, Ludgate-hill.

CAMP LANTERNS for the CRIMEA, combining every recent improvement, adapted for burning the Patent Fusee Candles, which can be instantly ignited as a lucifer. These Lanterns are equally suitable for warehousemen and others. Price 5s. each; Fusee Camp Candles, 1s. 3d. per box. Sold by all Lamp-dealers; by S. CLARKE, 53, Albany-street, Regent's Park; and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES, can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1s. 3d. per box, by all Grocers, Candle-dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and can be as quickly removed and used for a Hand-Lantern in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The appearance and effect are equal to that of a carriage lamp of superior finish, but, the price being less than half, these lamps are placed within the reach of every person requiring a light when driving.—Price 12s. 6d. each, at any of the Lamp-dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by Patentee, S. CLARKE, 53, Albany-street, Regent's Park, London.

DR. DE JONGH'S
LIGHT BROWN COD LIVER
OIL.

PREPARED FOR MEDICINAL USE IN THE LOFFODEN ISLES, NORWAY, AND PUT TO THE TEST OF CHEMICAL ANALYSIS. PRESCRIBED BY EMINENT MEDICAL MEN AS THE MOST EFFECTUAL REMEDY FOR CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, SOME DISEASES OF THE SKIN, RICKETS, INFANTINE WASTING, GENERAL DEBILITY, AND ALL SCROFULOUS AFFECTIONS—effecting a cure or alleviating suffering much more rapidly than any other kind.

PURE AND UNADULTERATED.

TESTIMONIAL FROM
ARTHUR H. HASSALL, M.D. F.L.S.
Member of the Royal College of Physicians,
Physician to the Royal Free Hospital,
Author of 'Food and its Adulterations,' &c. &c.

"Dear Sir,—I beg to return my acknowledgments for the copy of your Work on Cod Liver Oil, with which you have favoured me. I was already acquainted with it, and had perused it some time previously with considerable gratification, especially the chapter devoted to the consideration of the adulteration of Cod Liver Oil.

"I have paid, as you are aware, much attention to the subject of the adulteration of drugs. Amongst the articles examined, I have not overlooked one so important as Cod Liver Oil, and this more particularly, since it is a very favourite remedy with me, and is, moreover, so liable to deterioration by admixture with other, especially inferior Fish Oils. I may state that I have more than once, at different times, subjected your Light Brown Oil to chemical analysis, and this unknown to yourself, and I have always found it to be free from all impurity, and rich in the constituents of bile.

"So great is my confidence in the article, that I usually prescribe it in preference to any other, in order to make sure of obtaining the remedy in its purest and best condition.

"I remain, yours faithfully,
(Signed) "ARTHUR H. HASSALL, M.D."
"Bennet-street, St. James's-street,
"1st December, 1851."

"To Dr. De Jongh, the Hague."

SOLD IN LONDON BY ANSAR, HARFORD, & CO., 77, STRAND. Dr. De Jongh's sole accredited Consignees and Agents for the United Kingdom and the British Possessions, and sent by them, carriage free, to all parts of town.

May be obtained in the Country, from respectable Chemists and Venders of Medicine. Should any difficulty be experienced in procuring the Oil, Messrs. ANSAR, HARFORD & Co. will forward four half-pint bottles to any part of England, CARRIAGE PAID, on receipt of a remittance of 10s.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s.—IMPERIAL MEASURE.

CAUTION.—The bottles are labelled with Dr. De Jongh's stamp and signature, without which none are genuine. The Public are specially cautioned against frequent attempts to induce them to purchase other kinds of Cod Liver Oil, under the pretence that they are the same as Dr. De Jongh's, or equally efficacious.

HOT WATER APPARATUS, adapted for
Horibulbular and every other description of Buildings; improved Boilers, requiring no brickwork; Warm Air Apparatus, &c.—S. S. TAYLER, Engineer, Battersea.

KEATING'S COUGH LOZENGES.—
Upwards of Forty Years' experience has fully confirmed the superior reputation of these Lozenges, in the cure of Asthma, Winter Cough, Hoarseness, Shortness of Breath, and other Pulmonary Maladies.

Prepared and sold in boxes, 1s. 14d., and tins, 2s. 9d., 4s. 6d., and 10s. 6d. each, by Thomas Keating, Chemist, &c., No. 79, St. Paul's Churchyard, London.

The Testimonials of their efficacy are too numerous for publication.

KEATING'S COD LIVER OIL, imported
direct from Newfoundland, of the finest quality, pale, pure, and nearly tasteless. Imperial Measure, half-pints, 2s.; pints, 3s. 6d.; quarts, 6s. 6d.; five-pint bottle, 15s.

Orders from the country should expressly state "KEATING'S COD LIVER OIL."

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.?—If so, Miss GRAHAM'S NIOUKRENE is unfailing in its efficacy. It reproduces the Hair when lost by disease or decay, prevents its falling off, effectually checks greyness, strengthens weak hair, and is guaranteed to produce Whiskers, Moustaches, &c. in three or four weeks. For beautifying the hair, and sustaining its curling powers, it has no equal. Sent post free on receipt of 24 penny postage stamps, by MISS GRAHAM, 10, Cliechester-place, King's-cross, London. Extracts from Testimonials.—No. 669: "My whiskers are greatly improved." J. Short, Dudley.—No. 11, 327: "It has produced hair where I was bald." W. Morgan, Milford.—No. 8, 313: "My hair has thickened since using." Miss Cooke.—No. 619: "I have a full pair of whiskers." H. Robb, Hertford.—No. 912: "It has quite checked the greyness." Mrs. Hood.

DO YOU WANT BEAUTIFUL HAIR,
WHISKERS, &c.?—If so, use PALMAMILLA, declared by thousands of testimonials to be magical in its effects. In all riant growth, strengthening weak hair, preventing its falling off, and checking greyness in all its stages. For the production of Whiskers and Moustaches in two or three weeks, it has never been known to fail. Price 2s. sent post free (anywhere) on receipt of 24 penny postage stamps by Miss ALICE MELVILLE, 25, Argyle-square, London.—"I was quite bald, but have now a good head of hair." Wm. Haydon.—"My whiskers are growing very thick." R. Mede, Esq.—"It restored my hair, which I had lost in patches." W. Stuart.—"It has quite checked the greyness." Miss Ellis.—"My moustache is greatly improved." Capt. Ross.

DR. BARRY'S HEALTH RESTORING
REVALENTIA ARABICA FOOD counteracts Dyspepsia (Indigestion), Constipation and their consequences.—Andrew Ure, M.D. F.R.S. London. These consequences are Nervous, Bilious and Liver Complaints, Acidity, Heartburn, Flatulency, Sick Headaches and General Debility Low Spirits, Cough, Asthma, Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges or turns acid, or the weakest stomach, nor interferes with a good liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. Highly approved of by Drs. Ure, Shorland, Harvey, Campbell, Gattacker, Wurzer, Lord Stuart de Lauderdale, and 500 of the most respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.

In cisters, 1lb. 2s. 9d.; 2lb. 4s. 6d.; 5lb. 11s.; 12lb. 22s.; super-refined, 1lb. 6s.; 2lb. 11s.; 5lb. 22s.; 10lb. 33s. The 10lb. and 12lb. carriage free on receipt of Post-office order. Barry Du Barry & Co., Regent-street, London. For particulars, send for circulars, or veyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street; 330 and 451, Strand; 4, Cheapside; 63, Cornhill; 49, Bishopsgate-street; 55, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

RUPTURES EFFECTUALLY CURED
WITHOUT A TRUSS!—All sufferers from this alarming complaint are earnestly invited to consult or write to Dr. LESLIE as he guarantees them relief in every case. His remedy has been successful in curing thousands of persons during the last twelve years, and is applicable to every kind of single and double Rupture, however bad or long-standing, in male or female of any age, causing no confinement or inconvenience in its use whatever. Sent post free to any part of the world, with full instructions for use, on receipt of 7s. 6d. in postage stamps, cash, or post-office order, payable at the General Post-office, to Dr. Herbert Leslie, 37A, Manchester-street, Gray's Inn-road, London.—At home daily (except Sunday) from 11 till 3 o'clock. A Pamphlet of Testimonials sent post free on receipt of one postage stamp.

ASTHMA, COUGHS and COLDS.
A ONE OF DR. LOCOCK'S PULMONIC WAFERS, allowed to dissolve in the mouth, immediately relieves the most violent Asthma, Cough, or Cold, and protects weak lungs from all the irritation of fogs and frost. They have a pleasant taste.

TO SINGERS and PUBLIC SPEAKERS they are invaluable for clearing and strengthening the voice.
Price 1s. 14d., 2s. 9d. and 11s. per Box. Sold by all Druggists.

STUDENTS, TEACHERS, CLERGYMEN,
LITERARY MEN, and others, whose care and most anxious thought is constantly being called forth, can hope for but little pleasure in their high and important undertakings, unless secured by a proper buoyancy of spirit and vigour of mind. To secure this, then, it becomes the first consideration of every thoughtful individual; and the fine balsamic preparation, PARR'S LIFE PILLS, of all medicines, is without dispute the best calculated to produce a fine flow of animal spirits, a clear head, and a ready perception.

*** Ask for PARR'S LIFE PILLS.
Sold by
E. EDWARDS, 67, St. Paul's Churchyard;
BARCLAY & SONS, Farringdon-street;
SUTTON & CO. Bow-churchyard;
H. MAYNARD & CO. 63, and 64, St. MARK, 150, Oxford-street, London; and by all respectable Chemist and Medicine Venders in Town and Country.

In Boxes, price 1s. 14d., 2s. 9d., and in Family Packets 11s. each.

HOLLOWAY'S OINTMENT and PILLS
effected another cure of Bad Legs, after fourteen years' duration.—Mrs. Goutley, of Dartford, was afflicted for fourteen years with Bad Legs, and she was repeatedly told that it was impossible she could ever be cured. Eighteen months ago she became so much worse that her friends were obliged to carry her up and down stairs. At Guy's Hospital they refused to receive her, except as an in-door patient, as it was feared amputation would be necessary. She then resolved to try Holloway's Ointment and Pills, in the course of three weeks she was cured. She then effected a sound and perfect cure.—Sold by all Venders of Medicine, and at Professor Holloway's establishments, 244, Strand, London, and 80, Maiden-lane, New York.

Special arrangements are made for the preparatory training and accommodation of the Junior Pupils.
The Term will commence Feb. 1.

HYDE HOUSE SCHOOL, Winchester.
Dr. BEHR, assisted by Graduates from the Universities of Oxford and Cambridge, and Foreign Masters (all of whom are resident with him), undertakes the EDUCATION of a limited number of PUPILS, the Sons of Noblemen and Gentlemen, with a view to prepare them for the Public Schools, Naval and Military Colleges, or any of the various Professions.
The system of instruction includes:—1. THE CLASSICS and MATHEMATICS—in which the Pupils will be thoroughly well grounded, according to the most approved methods. 2. The MODERN LANGUAGES—to which special attention will be paid, and for the acquisition of which more than ordinary advantages are afforded. 3. THE USUAL BRANCHES of an ENGLISH EDUCATION—all, or any of which, may be made more or less prominent in the plan of Study, as may be deemed desirable in any particular instance. 4. EXERCISES in DRAWING, FENCING, and MILITARY TACTICS—in which the Military Class receives regular instruction.
The Establishment is divided into an Upper and a Lower School. Pupils in the latter division, are thus kept separate from their seniors, both in the hours of study and recreation.
References may be made to the parents of Pupils and others, including several Noblemen, Dignitaries of the Church, and individuals of high standing in society.
Terms:—11 under 12 years of age, 50 Guineas per annum; above that Age, 60 Guineas. No Extras whatever, except Books and Medical attendance.
A Quarter's notice must be given in case of a Pupil being removed from the School.

DR. LOVELL'S SCHOOL, WINSLOW HALL, Bucks.—The PUPILS will RE-ASSEMBLE, after the present vacation, on the 25th of JANUARY. The course of tuition at this School includes the Classical and all other studies that are preparatory to the Universities, the Military Colleges, and the Army Examinations. French and German assistants reside on the premises. A late pupil has just been elected to a Scholarship at Lincoln College, Oxford. Two others passed the Army Examination last September, and have already received Commissions.—All further particulars can be had on application to the Principal.

CALNE SCHOOL, WILTS.—The Rev. W. B. JACOB, M.A. of Emmanuel College, Cambridge, receives Pupils to prepare them for the Public Schools at Forty-five Guineas per annum, Washing included.

The course of instruction embraces Latin, Greek, French Mathematics, Writing, Arithmetic, &c.
French taught by a resident French Master.
The situation is healthy, and the grounds spacious. Distance six miles from the Chippenham Station, on the Great Western Railway, to and from which there is a Coach twice a day.
The following Gentlemen have kindly allowed References to be made to them:—
Rev. W. WAYTE, Esq. Highlands, Calne.
Rev. W. DALBY Compton Bassett, near Calne.
Rev. G. W. DAUBENY, Secord, near Devizes.
H. G. AUDREY, Esq. Nottula Lodge, near Chippenham.
E. ABSOLON, Esq. Woodlands Lodge, Blackheath, Kent, and 23, Road-lane, City.
JAMES THEOBALD, Esq. Winchester.
R. G. GALT, Esq. Winchester.
EDWARD LOMER, Esq. Southampton.
*** The School will RE-OPEN on WEDNESDAY, the 24th inst.

LUDLOW ROYAL FREE GRAMMAR SCHOOL. Chartered by King Edward VI.

Head Master—The Rev. James Banks, M.A., late Scholar of Lincoln College, Oxford.
Second Master—Philip Newman, Esq. M.A., Exeter Coll., Oxford.
Third Master—Mr. E. Henessey, late Senior Pupil-Teacher at Greenwich Hospital Naval Schools.
French, German, and Italian Master—Mons. Desormes.
Lecturer in Physical Science—Mr. G. With.
Drawing Master—Mr. R. B. Bustin, Master of the Government Drawing and Modelling School, Hereford.
The Head Master receives Boarders to Educate for the Universities, the Military and Civil Services, and the East India Company's Appointments, as well as for the Professions.
Under 15 years of age, at 40 Guineas per annum.
Above 15 ditto, 50 Guineas.
Extra for Washing, 3 guineas per annum. Modern Languages, 1 guinea a quarter. Drawing, 5s. the half-year. Practical Class in Chemistry, 15s. per half-year. Fortification and Navigation. Parents, who prefer it, may pay inclusive terms, viz. 45 guineas and 35 guineas, according to age, covering every charge, except board and medical attendance.
There are several excellent Exhibitions to Oxford, Cambridge, and Durham.

DAY BOYS, whose Parents reside in, or within 10 miles of Ludlow, are free on payment of 3l. per annum, to the ordinary teaching of the Schools.

BRONN'S HOUSE PROTESTANT SCHOOL

in ZIEGELHAUSEN, two miles from Heidelberg.
Mr. DE LA FITE has taken a House for the Opening of his Protestant School. He leaves England on the 1st of February with his Pupils. Parents willing to send their children under Mr. de la Fite's own immediate care, should apply to him by letter, at MILTON COTTAGE, PLAISTOW, Essex.
Mr. de la Fite has permission to refer to the following friends:—
Edmund Guiney, Esq. Lombard-street; Messrs. Hyde, Hodge & Co. 2, Great St. Helen's; Sir John Pirie, Bart. & Co. 10, Birchen-lane; Thomas Roberts, Esq. 9, Billiter-street, London;—Frank Hampton, Esq. 12, Norfolk-street, Manchester; Messrs. Marshall & Aitken, North-bridge, Edinburgh; M. le Baron de Prechamps, Moscow; M. A. Teste, M.D. 16, Place du Havre, Paris; and the Rev. John Curwen, Plaistow, Essex.

GERMAN CLASSES for LADIES at CAVENDISH COLLEGE, No. 68, WIMPOLE-STREET, CAVENDISH-SQUARE.—Arrangements have been made with Mr. Löwy, the German Professor at this College, to increase the number of his German Classes. Pupils will thereby have greater facilities of joining the College at any period of the Term.—For particulars, apply at the CAVENDISH COLLEGE, or at Mr. Löwy's residence, No. 2, Southampton-street, Fitzroy-square.

AS DAILY or MORNING GOVERNESS.—

A Lady of considerable experience and solid acquisitions is OPEN TO AN ENGAGEMENT as above. She instructs in all the branches of a sound English Education, with French (acquired by several years' residence in Paris) and Italian. Belgavia or Brompton preferred.—Address B. M. S., Westerton's Library, Knightsbridge.

DR. ALTSCHUL'S LECTURES and READ-INGS.—To Literary Institutions, Schools, and Families.—LECTURES in English, combined with Dramatic and Literary Readings, are delivered by Dr. ALTSCHUL, M. Philolog. Soc. London. Examiner R. Coll. Preceptors, Professor of the German, Italian, and French Languages and Literature.—2, Chandos-street, Cavendish-square.

A MARRIED MEDICAL MAN, retired from Practice, and residing in a Healthy Village in Surrey, within an easy distance from Town by Railway, and Ten minutes' walk from a Station, RECEIVES a single INVALID PATIENT. For terms, address, and references, apply to Mr. Newby, Publisher, 30, Welbeck-street, Cavendish-square.

TORQUAY.—The Wife of a Clergyman residing at Torquay will be happy to undertake the CHANGE of a FEW CHILDREN whose parents desire for them a mild climate and a comfortable home. All that is essential to a good education will be taught as far as is compatible with the health of the children.—Address, D. D., Mr. Cockrem, Bookseller, Torquay.

A GENTLEMAN who has for several years filled a responsible situation as a Compiler and Editor of educational and popular literature, is NOW OPEN to form NEW ENGAGEMENTS, upon which he could enter early in the ensuing summer.—Address A. F., at Messrs. W. & R. Chambers's, Edinburgh.

AS PRIVATE SECRETARY to a Nobleman or Gentleman, or as Secretary to an Institution.—The Advertiser, age 28, who holds a responsible Government Appointment, being at liberty early in the afternoon, is desirous of an ENGAGEMENT in either of the above capacities. He has acted as Private Secretary to a late Diplomatist; has received a Classical Education; understands French, German, and Spanish; is well experienced in Correspondence and Accounts, and is prepared with satisfactory references as to competency and respectability.—Address G. H., Post-office, Stockwell Green.

TO NOBLEMEN, GENTLEMEN, and DIRECTORS of PUBLIC INSTITUTIONS.—The Advertiser, who is of active habits and well connected, and who has been engaged for many years in a position of trust, and not wholly dependent, is desirous of an ENGAGEMENT as LIBRARIAN, SECRETARY, or otherwise, where he would be usefully employed. Highly satisfactory references can be given, and security if required. Address to J. B., 19, Park-square East, Regent's Park.

TO PARENTS and GUARDIANS.—A well-educated, gentlemanly Youth is required as PUPIL to a DEPICT of action and first-hand as the West End. He would be fully instructed in the Mechanical as well as the Surgical Departments of the Profession, would join the family circle, and enjoy the comforts of a well-regulated home. If desired, he could follow the Preparatory Classes at either of the Colleges.—Apply to G. F. H., 66, Conduit-street, Regent-street.

THE PROVINCIAL PRESS.—MEETING OF PARLIAMENT.—A Gentleman, who has been long honourably connected with the Press, as Editor and otherwise, and whose present engagements in London afford him the means of obtaining the best information on all political subjects, would be glad to furnish LEADERS, or a WEEKLY LETTER, to a Provincial Journal, on liberal politics, on moderate terms.—Address Sigma, Tidd's Library, 57, Goswell-road.

FOSSILS and ROCKS.—A COLLECTION, containing 470 Specimens from various formations, FOR SALE. Price 8l. 8s.—Apply to C. F. TOOTALL, Chesnut-lane, Wakenfield.

APARTMENTS, FURNISHED.—TO BE LET, handsomely furnished, a SET of ROOMS on the First Floor, consisting of Drawing-room, Bed-room, and Dressing-room, with water-closet, suitable for a Single Gentleman; a Bedroom for man servant if required.—41, Wigmore-street, Cavendish-square.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyl-place.

DAQUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life * * * without the slightest sacrifice of definition, or the smallest approach to distortion.—Indeed, the errors and peculiarities of former impressions appear to be corrected."—*Advertiser*, July 22, 1854.

"Mr. Mayall's portraits represent the high art of the daguerreotype; they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

HEALTH.—GYMNASTICS.

THE LONDON GYMNASIUM.—Capt. CHIOSSO (and Son), Professor of Gymnastics at University College School, 124, Oxford-street, near Regent Circus. FENCING, BROAD-SWORD EXERCISE, DRILLING.—PRIVATE LESSONS, and CLASSES.—Also at 11, New-road, corner of Governor-street, University. Private Establishment, 28, Baker-street, Portman-square.—Latest published, 'THE RATIONALE of GYMNASTICS,' price 1s. 6d.

RICHARDS'S PRINTING-OFFICE, 101, St. Martin's-lane.—The Printing Business carried on by Mr. Croomes, as Executor of the late Mr. C. Richards, at the above address, has been purchased by Mr. JACK, who has been employed as Manager for the last four years. He has entered into partnership with Mr. THOMAS SERCOMBE; and Mr. Croomes begs very cordially to recommend the new Firm to the kind and valued patronage of his friends.

With reference to the above announcement, we beg to intimate that the Printing Business so long conducted by the late Mr. C. Richards, will henceforth be carried on by us, as his Successors, under the firm of SERCOMBE & JACK (and in the same premises); and we trust, by the additional facilities we have obtained, and by close personal attention, to secure a continuance of your esteemed commands.

1st January, 1855. THOMAS SERCOMBE, ARCHIBALD HAY JACK.

C. R. BROWN & J. MACINDOE, Auctioneers of FINE ART, LITERARY and other Property, 76, QUEEN-STREET, GLASGOW.

YONGE'S NEW GRADUS AD PARNASSUM.
Printed by Authority and for the Use of Eton, Westminster,
Winchester, Harrow, Charterhouse, and Rugby Schools;
King's College, London; and Marlborough College.

A New Edition, in post 8vo. price 9s. bound,
A GRADUS of the LATIN LANGUAGE:
containing every Word used by the Poets of good authority.
By C. D. YONGE, B.A., Author of a New *English-Greek Lexicon*.
The Fourth Edition, carefully revised.

* * * This is the only Gradus used at any of the Public Schools
and Colleges above mentioned. It contains 100 pages and about
2,000 words more than the old Gradus ad Parnassum. All the
words are classified according to their age; their different mean-
ings are distinguished and the authorities cited; and the phrases
are selected solely from the Roman Poets of the Augustan age,—
to whose writings this Gradus forms a sufficient Lexicon.

London: Longman, Brown, Green, and Longmans.

THE NEW NOVELS

NOW READY.

THE STEP-SON. A Domestic

Romance of the Present Day. By F. N. DYER. 2 vols. 12s.
From the Spectator.—"Mr. Dyer has great distinctness of conception in whatever he undertakes to delineate with clearness and vigour of style."
From the Morning Chronicle.—"The characters are well conceived and carefully delineated, and the story is vigorously and powerfully told."

WOMEN AS THEY ARE. By ONE

OF THEM. By the Author of 'Margaret; or, Prejudice at Home and its Victims.' 2 vols. 12s.
From the Morning Chronicle.—"There is not only beauty in the style of this novel, but power—not grace only, but concentration. The descriptions are sketched with a masterly hand. The secret springs of the heart lie bare before the keen eye of this penetrating analyst. Few have shown more genius in the school to which this work belongs, than the author of 'Women as They Are.'"

ASPEN COURT, and WHO LOST and

WHO WON IT. A Tale of Our Own Time. By SHIRLEY BROOKS, Author of 'Miss Violet and Her Officers.' 3 vols. 12s. (Just ready.)

THE DRUSES of the LEBANON;

THEIR MANNERS, CUSTOMS, and HISTORY. With a Translation of their Religious Code. By GEORGE WASHINGTON CHASSEAUD, late of Beyrout, Syria. 8vo. with Map. 14s.

From the Athenæum.—"A volume of remarkable interest. Mr. Chasseaud was principally attracted by the Druse population of Anti-Libanus, and learned early to appreciate their feelings, to inquire into their opinions, and to ponder over their romantic history. To him no scenes are more familiar than the Plains of Promise."

New Books on the War.

OUR CAMP IN TURKEY, and the WAY TO IT. By Mrs. YOUNG, Author of 'Cutch,' 'Western India,' &c. Post 8vo. 7s. 6d.

"A volume that will be devoured by all who are interested in all that concerns our brave army in the East. The style is graphic and vigorous."—*Britannia.*

THE CRIMEA, the BLACK SEA, and the BALTIC; including an Account of Sebastopol. By CHARLES HENRY SCOTT. 2nd Edition. Post 8vo. 7s. 6d.

A THIRD and CHEAPER EDITION OF THE FRONTIER LANDS of the CHRISTIAN and the TURK. By a BRITISH RESIDENT OF TWENTY YEARS in the EAST. 2 vols. 8vo. with an Illustration. 21s.

"Equal to Warburton's 'Crescent and the Cross.'"—*Morning Herald.*

This day, Second Edition, in post 8vo. 7s. 6d.

HABITS and MEN; with Remnants of Records on the Makers of Both. By DR. DORAN, Author of 'Table Traits and Something on Them.'

"Dr. Doran's book is not only a volume, but full of strange information, that every one would like to possess."—*Times.*
 "Dr. Doran's 'Table Traits' was an excellent book, and this is in no respect inferior. It is as pleasant as it is suggestive."—*Examiner.*

People's Edition of Mr. Prescott's Historical Works.

Now ready, in crown 8vo. volumes.

PRESCOTT'S HISTORY of the REIGN of FERDINAND and ISABELLA. 1 vol. 5s.

PRESCOTT'S HISTORY of the CONQUEST of MEXICO. 1 vol. 5s.

PRESCOTT'S HISTORY of the CONQUEST of PERU. 1 vol. 5s.

Three-Volume Editions, with Plates, of Mr. Prescott's Historical Works.

Now ready, each with complete 3 vols. with all the Plates of the Original Editions.

PRESCOTT'S HISTORY of the REIGN of FERDINAND and ISABELLA. 3 vols. Plates, 10s. 6d.

PRESCOTT'S HISTORY of the CONQUEST of MEXICO. 3 vols. Plates, 10s. 6d.

PRESCOTT'S HISTORY of the CONQUEST of PERU. 3 vols. Plates, 10s. 6d.

Library Editions of Mr. Prescott's Historical Works.

PRESCOTT'S HISTORY of the REIGN of FERDINAND and ISABELLA. 2 vols. 8vo. Plates, 21s.

PRESCOTT'S HISTORY of the CONQUEST of MEXICO. 2 vols. 8vo. Plates, 21s.

PRESCOTT'S HISTORY of the CONQUEST of PERU. 2 vols. 8vo. Plates, 21s.

NOTICE.

Now ready, in 8vo. with upwards of 60 Illustrations, 12s.

A NINTH and CHEAPER EDITION OF FRANCATELLI'S MODERN COOK.

NOTICE.—THE TENTH EDITION OF THE INGOLDSBY LEGENDS; or, MIRTH and MARVELS, is published this day, in 3 vols. post 8vo. with Illustrations, 21s.

London: RICHARD BENTLEY, New Burlington-st.

13, GREAT MARLBOROUGH-STREET.

HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED

THE FOLLOWING NEW WORKS.

TURKEY; its HISTORY and

PROGRESS: from the JOURNALS of SIR JAMES PORTER; continued to the Present Time, by SIR GEORGE LARPENT, Bart., &c. 2 vols. 8vo. with Illustrations, 30s. bound.

TROPICAL SKETCHES; or, Re-

MINISCENCES of an INDIAN JOURNALIST. By W. KNIGHTON, M.A., Author of 'Forest Life in Ceylon.' 2 vols. 21s.

"We are glad to meet Mr. Knighton again in the field of Indian literature. In 'Tropical Sketches' he has produced a couple of volumes filled with much fresh and vigorous writing, abounding with stirring incidents, and giving a penetrating glance into the core of Indian society."—*Chronicle.*

The ROMANCE of the FORUM;

or, Narratives, Scenes, and Anecdotes from Courts of Justice. SECOND SERIES. By PETER BURKE, Esq., Barrister at Law. 2 vols. 21s.

"This second series of the 'Romance of the Forum' equals the first in interest and variety."—*Literary Gazette.*

HOME LIFE IN RUSSIA.

Revised by the Editor of 'Revelations of Siberia.' 2 vols.

"One of the most graphic pictures of Russian life which has ever been presented to the British public. The book can scarcely fail to interest the reader. It throws a strong light upon many features of the social constitution of Russia which have hitherto been enveloped in darkness."—*Daily News.*

MEMOIRS and CORRESPON-

DENCE of GENERAL SIR W. NOTT, G.C.B., Commander of the Army of Candahar. 2 vols. 8vo. 28s.

The LIFE of MARGUERITE

D'ANGOULEME, QUEEN of NAVARRE, Sister of Francis I. From numerous Original Sources. By MISS FREER. 2 vols. with fine Portraits, 21s.

MISS MITFORD'S DRAMATIC

WORKS. 2 vols. with Portrait, &c. 21s.

"We recommend Miss Mitford's dramas heartily to all by whom they are unknown. A more graceful addition could not be made to any collection of dramatic works."—*Blackwood.*

PAINTING and CELEBRATED

PAINTERS, ANCIENT and MODERN. Edited by LADY JERVIS. 2 vols. 21s.

LIGHTS and SHADOWS of AUS-

TRALIAN LIFE. By Mrs. CLACY. 2 vols. 21s.

THE NEW NOVELS.

MAMMON; or, the Hardships of

an HEIRESS. By Mrs. GORE. 3 vols. (Immediately.)

OAKLEY MASCOTT. By

L. HOWE. Dedicated to Professor ARTOUR. 2 vols.

"A very clever romance. The style throughout is fluent and forcible, and many of the scenes are sketched with considerable graphic power."—*Morning Post.*

"A deeply touching story, written with exquisite taste and feeling."—*John Bull.*

ANTIPODES; or, The New

EXISTENCE, A TALE of REAL LIFE. By A CLERGYMAN. 3 vols.

"Antipodes; or, the New Existence' is a story of our own time. We can say truthfully that it is very eloquent and deeply interesting."—*The Critic.*

HERBERT LAKE. By the

Author of 'ANNE DYSART.' 3 vols.

THE YOUNG HUSBAND. By

Mrs. GREY, Author of 'The Gambler's Wife,' &c.

THE CURATE of OVERTON.

MAGDALEN HEPBURN. By

the Author of 'MARGARET MAITLAND,' &c. 3 vols.

The SECRET HISTORY of a

HOUSEHOLD. By the Author of 'ALICE WENTWORTH.' 3 vols. (In the Press.)

REVIEWS

THE WAR.

THE main point of M. Kossuth's criticism on the war is gaining confirmation in unexpected quarters. Sir Howard Douglas—whose authority will not be disputed, like that of the Magyar orator, on the ground of his being a civilian,—in a new edition (the fourth) of his *Treatise on Naval Gunnery* (Murray), pronounces the Alma a fruitless victory and the celebrated flank march a mistake. Civilians objected to M. Kossuth that he was not a soldier; and therefore had no right to pronounce opinions on the war. Critics who had never seen an army in the field and who had never given two days to the study of military science, refused to hear a man who had been the chief of a martial race,—who had lived in the tented field,—and who had given up two years of time and abilities, which no one will dispute, to the mastery of the subject,—though they have not themselves been slow to praise, to censure, and to condemn when it has so pleased their high mightinesses. Sir Howard Douglas, however, is a soldier—a soldier learned in his art beyond the vast majority of his brethren. Not being an orator, a man of the *haute politique*, or the leader of a fallen nationality, he will not be suspected of unworthy motives in freely and fully stating his opinions and conclusions on the war in the Crimea.

As we have no mission to discuss such topics as are here treated, we shall make Sir Howard Douglas, as far as possible, the expounder of his own ideas. After some preliminary talk, which need not detain the reader, he opens his section on the Naval and Military Operations in the Black Sea with observations on our want of preparation for actual war.—

“At the beginning of the year 1854 there remained little hope that the peace of Europe would be preserved, and it was soon afterwards judged necessary to send a British army to the East, in order to co-operate with one from France. By great exertions, upwards of 20,000 troops, infantry and cavalry, were shipped and sent off; the guns, military stores, and provisions were to be despatched in proportion as they could be collected. A few field-batteries only, affording on an average scarcely one gun for every thousand men, were sent. Gunner-drivers and horses for the train, waggons to carry ammunition, spring-carts for the sick or wounded, sappers and miners with their intrenching tools, and bridge equipments, with all the other indispensable requisites for an army in the field, were scantily supplied, and some were altogether wanting. Thus, on a small peace establishment, the country was caught in a political storm and involved in a mighty war. There existed some good regiments of infantry and a few over-officered squadrons—they could not be called regiments—of well-appointed cavalry; but all were totally unprovided with the means necessary for enabling them forthwith to take and keep the field. In this state a military force, constituting nearly the whole of our effective strength, was despatched with wonderful promptitude to the contemplated seat of war; but, lacking the establishments which should have given it vitality, it is not surprising that it was not prepared to enter on a campaign till the season propitious for military operations was near its termination.”

Sir Howard's book is dedicated, “by permission,” to the Lords Commissioners of the Admiralty. Such a circumstance will not escape the reader's mind as he glances over the explanatory and exculpatory pages interwoven with this criticism on the campaign. Sir Howard is severe in his criticism, but refrains from laying the blame in any quarter. He is quite a courtier in the skill of his re-creations. Blunders have been made; and nobody seems to have made them. We pass

these exculpations, and arrive with our forces and the military critic in the Crimea.—

“Under these very disadvantageous and inauspicious circumstances, with respect to the small amount of our effective military force, and the late period of the season at which it was so far equipped as to be able to take the field, the allied army, deeply impregnated with the seeds of disease, and, had it even been in an efficient sanitary state, not numerically strong enough, particularly in cavalry, to ensure success, entered on the arduous service in which it is now engaged, the object being to besiege, capture, and destroy the great fortress and naval arsenal of Sevastopol. There never was a case in which a siege required to be undertaken with greater regard to the relative strength of the besieged and besieging armies, and to the quantity as well as quality of their siege artillery—never one in which a great superiority of the investing army over the forces forming the garrison of the place was so imperative.”

Now for a scientific view of Sevastopol and the siege.—

“In estimating the amount of force required to besiege and capture Sevastopol, regard should have been had to the important fact that, in its local character as a military position, that town is a vast fortress situated on both sides of a long harbour resembling a broad river, and of which the northern side, occupied by the citadel, is elevated above the southern part. The place belongs therefore to the category of a fortress divided into two portions by an unfordable river, in which case the divisions of the investing corps would be prevented from mutually assisting each other. To invest such a place there is required an army twice as strong as would suffice if no such obstruction to intercommunication and mutual support existed. In this case also, the enemy keeping the field with a numerous army of observation, a strong and very extensive line of circumvallation would be necessary. With respect to the means of defence, with which it is well known that Sevastopol was plentifully provided,—Here is a vast naval arsenal already well fortified, and capable, from the time of being menaced with an attack, of being greatly strengthened in its works and its garrison: it possessed enormous quantities of ordnance and ammunition, which had been accumulated in its magazines; and, exclusive of the artillerymen attached to the ordnance of the place, it had the power of drawing from the fleet in the harbour vast numbers of well-trained naval gunners, all of whom could be rendered available for manning the artillery during the progress of the siege. No operation in war may be depended upon with so much certainty as the siege of a fortress, provided it be undertaken with sufficient means and be skilfully conducted; but no measure is so disastrous as the undertaking of a siege, as was the case with that of Burgos, at which the author served, in 1812, without the requisite strength in men and materials. The attacking force should be sufficiently numerous to invest the place on every accessible side, so that nothing may be able to get in or out, and it should be equal in amount to about five, and never less than three times, the garrison: there should be, moreover, in the field a covering army, of which a large portion should be cavalry, in order to protect the operations of the siege, and prevent them from being interrupted by an army of observation, which the enemy may bring up while they are being carried on. The allied army in the Crimea found itself manifestly inadequate to the accomplishment of the object in view, and even the victory on the Alma rendered it still less able to compete with the overwhelming power of its opponents.”

Sir Howard Douglas pronounces a strong condemnation of the campaign in the Crimea.—

“To invade the Crimea, an integral portion of the Russian empire, and lay siege to Sevastopol at that late period of the season,—and, as has been already observed, with an army deeply impregnated with the seeds of disease,—was, in the opinion of the author, a desperate and dangerous operation.”

The following criticism, though free, is very respectful. We take the liberty of emphasizing a few paragraphs.—

“It is much to be regretted that, from want of sufficient force, it should have been necessary to abandon the line of operations by which the place was at first approached, and on which, at the Alma, the army covering Sevastopol in that direction was defeated. The battle was a brilliant deed of arms, most honourable to the allies; but, in consequence of the change of plan, it must be allowed that, except in its moral effects, it was fruitless, and in some important respects disadvantageous. In laying siege to Sevastopol, it may safely be asserted, that the most advantageous point of attack was the northern side; there the ground is most elevated, and the large octagonal work on its summit is its citadel and the key of the place. This taken, the *Telegraph and Wasp batteries on the northern heights, Fort Constantine and the forts below, being commanded and attacked in reverse, must have soon fallen*; while the town, docks, arsenal, and barracks on the south side of the harbour would be at the mercy of the allies, who, by the fire of their batteries, might have entirely destroyed them all; whereas, by attacking the place from the south, the enemy holding the northern heights, although the works on the crest of the southern heights should be breached and taken, the town, the body of the place, with its docks and arsenals, *will not be tenable by the besiegers till the great work on the northern side, and all its defensive dependencies, shall have been taken*; and these, no doubt, will be greatly strengthened before the allies are in a condition to direct their attacks against them. The flank march of the whole army to the south abandoned at once to the enemy a perfectly free communication between the place to be besieged and his army of observation in the field, and left open their line of operation from their base at Perekop; it disclosed the alarming fact that, from want of sufficient force, Sevastopol could not be invested on every side; *that the most advantageous point of attack was not to be attacked, but turned*; that the enemy's communication with the strongest portion of the town, its citadel, its keep, and the key of the whole position, was to be left open to him; and that, *instead of besieging Sevastopol, the allied army was only to attack an intrenched position on the southern heights*, supported in its rear by the strongest feature and most formidable works of the place, and open to receive succour or reinforcements to any extent; also that the attack of the place was to be carried on without a covering army, distinct from the besieging force, to protect it from being disturbed in its operations by the enemy in the field, who was thus left in direct and immediate communication with a *tête* which he might support with all his force. *The flank march of the whole army to the south was therefore an error in strategical science.*”

In the following passage we seem to hear the sound of the Magyar's voice, as it poured out two months ago its prophecies of ill, so mournfully verified by events.—

“Had the allied army been strong enough to follow up its success on the Alma by the occupation of Duwankoi and Khuton, or Bakchi Sarai, and to invest the place on the north with a large reserve force, which assuredly should have been at hand, by attacking and carrying the small intrenched camp recently established by the Russians to prevent a landing being made good at the mouth of the Belbec river, the state of affairs in the Crimea might at this time have been very different. However formidable the defences of that camp may be, seaward, it might easily have been taken by land, while a part of the allied force moved round and gained possession of Balaklava so as to open its port to the fleet, the latter having on board a sufficient reserve to invest the place on that side also. To this it may be said, we sent to the intended seat of war the whole of our effective military force, and could do no more. This unhappily is true; but if, as the author has always thought, and is now undeniable, ‘our all’ was clearly insufficient to do our part to effect the purposes in view, all that can be said is, that so great an operation should not have been undertaken until ample means had been provided, *and not on any account at so late a period of the year.* But, moreover, if

the whole of our very limited means was not sufficient to enable us to provide a contingent adequate, in the stipulated proportions, to form with our allies an army sufficiently strong to enter on a great territorial war in an enemy's country with any fair prospect of success, how was it then—and, till too late—with respect to reinforcements? Where were our reserves? No such operation should ever be undertaken without large reserves either at hand or immediately forthcoming. Much it may be feared that those about to be despatched from England, or collected from our stations in the Mediterranean, will not be available during this campaign to do more than fill up the gaps which pestilence and war have made and are still making in the ranks of the allied army. And as to the campaign of 1855! Not the dribblets which we are now sending out, and chiefly of newly-raised men, will suffice: 200,000 men at least will be required to retrieve our affairs in the Crimea, and to carry on the war."

Sir Howard dwells on the want of foresight shown by the Ministerial and military authorities.—

"The very first principle in strategical science is to keep a retreat open in the event of a failure in the object of an operation; another is not to undertake any military measure without well considering both the unsuccessful and the successful issue. No thought appears, in the present instance, to have been bestowed on either of these maxims: complete and speedy success was deemed certain: that Sevastopol was doomed to fall no one seemed to doubt, and failure in this object was pronounced impossible. The sad disappointment is now attributed to causes which, it is said, could not have been foreseen—the strength of the place, its abundant means of defence, and the determined resistance opposed by the Russian forces: yet all this should have been anticipated."

Sir Howard holds it to be only short of insanity to besiege a town without being able to invest it; and his illustrations of his theory from the history of war are apt. The last is fresh in all minds.—

"In the year 1854 the Russians attacked Silistria without having invested it, and tried to carry the place by assault, but were repulsed with great loss. Omar Pacha succeeded in throwing reinforcements into the fortress, with assurances that he would speedily come to its relief. The Russians made another desperate assault, hoping to take it before it should be relieved; but the Turks, strengthened by the reinforcements thrown in, repulsed the attack, and the Russians were compelled to raise the siege, with a loss of 10,000 men, who had fallen during the forty days that it had lasted."

Here we have other illustrations drawn from history.—

"Very different is the condition of the Russians at Sevastopol from that of the Austrian army at Ulm, in 1805: that city being in a position which admitted of being surrounded by the French, and far distant from the army which should have supported it, was compelled to surrender. Rather may their circumstances be compared to those of the Austrians at Olmütz, in 1758, when that city was besieged by the army of Frederick II. On that occasion General Thierheim connected the detached forts about the place by works of earth, so as to convert the city into a strongly entrenched camp, by which the place was enabled to hold out till the king was obliged to retire from it. The state of the allies before Sevastopol is nearly similar to that of Napoleon I. when, in 1796, he besieged Mantua. That great general, finding himself in danger of being immediately surrounded by the two armies which were advancing to relieve the place, did not hesitate to raise the siege, abandoning even his siege artillery. He threw his whole force on each of the Austrian armies in succession, and, in defeating them, he struck the decisive blow which rendered him master of the north of Italy."

The following observations, though discursive, are of extreme interest, as containing the views of a thorough soldier. As before, the italics are our own.—

"How the troops now before Sevastopol have

endured their labours, and service in the trenches, is a miracle in war. The force for guarding the trenches cannot be regulated by any proportional part of the strength of the garrison, for the place not being invested, that cannot be known; but this we know, that the men on duty in the lines were very nearly half the effective strength of the division that furnished them; and that a very large portion of those who so heroically repulsed the attack of the 5th of November, had just left their night's duty in the trenches. The force required for guarding the trenches should not be less than three-fourths of the strength of the garrison; and unless this proportion be observed, the operations and works of the siege will be continually exposed to be disturbed or destroyed by the sorties. Frequent sorties from a besieged place are strongly condemned, particularly in the early stages of the attack, when its works are yet distant; because even if partially successful, the loss of one man in a place completely invested, is more serious to the besieged than six or seven would be to the besiegers. But when the garrison is strong, and the besieging army inadequate to the enterprise (which is the case in the attack of Sevastopol, it not being invested), this maxim is reversed: the loss of one man to the allied army was far more serious to it than a much greater loss to the defenders of a position which might be strengthened to any extent commensurate with its force in the field. Under these circumstances, the Russians did right to make frequent sorties, and to resort to operations of active defence which they could not have done had the place been invested. In these attacks, though most gallantly repulsed, the allied army has sustained far greater loss than in prosecuting the operations of the siege; and this is a penalty paid in precious blood, for having undertaken a siege with means so inadequate as to invite, and admit of, as we see, those *retours offensifs*, which under usual circumstances are as condemnable as impracticable. *Nothing could justify the attack of Sevastopol at that late period of the year but the certainty of taking it by a coup-de-main*; and that this was believed possible, and urged on accordingly, is clear from the general tone of the organs of public opinion, which at the commencement, and throughout the operations of the war, committed the serious error of underrating the force and power of our enemy, and of exaggerating our own. The author knew that the reports of the place having been taken could not be true, and did all in his power to discredit statements which raised the expectations of the people of this country to the highest pitch, thereafter to occasion the most bitter disappointment. The southern heights may be crowned by our batteries, but lodgments formed on the face of the slope descending towards the town, docks, and arsenal would be so much exposed to the fire of the large octagonal work and of all the batteries which, no doubt, have been established on the opposite side, that the occupation of the place appears to be utterly impracticable without first reducing the works on the northern side; and to effect this will require another siege:—such is the necessary consequence of having attacked the place at the wrong side! Viewed strategically, the operation of laying siege to Sevastopol commenced inauspiciously: the place is not invested, its communications with the country, with the army in the field, and with its base are free; succours and supplies to any amount can be thrown in, or taken out; the defensive force in the place is in direct communication with the offensive force in the field. The besiegers know not what force they are fighting. The Russian army of observation may one day be increased by large draughts from a very strong garrison; and assaults which, against a garrison greatly reduced in number, and inaccessible to any external support, would be followed by the surrender or capture of the place, will fail in the event of the garrison being strengthened from without; whilst even if the assault of the breaches that may be made by the allies on the outworks of the southern side be successful, this would lead to no such result as would follow when lodgments are made, or breaches opened on the ramparts of the body of a place inaccessible to relief, and from which there is no escape. *Such a place need not and will not capitulate, attacked as it is, however successful that attack may be.* The garrison cannot be captured; since, after making the most determined

resistance, it may retire to the northern heights, or it may evacuate the place altogether, and unite itself with the army already in the field, after having rendered the town uninhabitable, and destroyed all the warlike stores it contains."

Soldiers, as a body, underrate the powers of the fleet. Blake and Nelson won their greatest battles against all rules, and laughed at the pedants who opposed mechanical considerations to the inspirations of genius. Still, the mature opinion of a writer on "Naval Gunnery," though a soldier, on the action of the fleets against Sevastopol, will be read with interest.—

"The bombardment of the 17th of October satisfied, to some extent, the desire of the commanders, officers, and seamen of the fleets to have an active share in the labours and dangers of the attack of Sevastopol, and to gratify popular clamour against the reserved position in which the Admirals wisely kept their fleets, as at Bomarsund; but that bombardment contributed nothing to the reduction of the place. The co-operation of the fleet could only be useful as a diversion in favour of the land attack, when the army should be prepared to assault the enemy's position at the same time; but under existing circumstances, it could produce no such effect, and the severe damage and loss sustained by the ships and their gallant crews was very inadequately compensated by the little injury they inflicted on the enemy's forts and seaward batteries, which not being faced with granite, appeared to be more severely damaged than at Bomarsund. The safety of the whole operation depends very materially on the presence of the fleets, and on their ability to keep the sea, as we shall find hereafter. The ships were greatly short of guns and of hands. The entrance to the harbour was blocked up by the sunken ships, so that the batteries which the fleets engaged could neither be approached sufficiently near, nor turned by forcing an entrance. The effects produced by the ships on the stone forts were far from justifying an opinion that the fleet could have attacked the place with any prospect of reducing it, had not land forces been employed: it shows rather that an attack made by the fleet alone on the seaward batteries, however gallant and successful it might have been in damaging some of the defences, and dismounting some of the guns, would have produced no results commensurate with the losses sustained; the ships would have been vastly more crippled than they were in the attack which actually took place, and there can be no doubt that some ships would have been entirely destroyed and many disabled. The severe effects produced by the Telegraph batteries and the Wasp Fort, by their plunging fire, owing to their elevation, and the very little damage they sustained by the fire of the ships, may well be cited as a practical illustration of the 'command' which coast batteries should have over the surface of the sea. The French ships were drawn up in line against the forts on the south side of the harbour, and partly across its mouth; the British ships were in line opposite the forts on the north side; and the Turkish ships were drawn up between them. The ships were so much underhanded, in consequence of no less than 4,000 seamen and marines having been landed from the fleet to serve at the siege, that the gallant Admiral would not allow any men to be exposed on the upper deck of the Britannia but his staff, signal-men, &c., and walked his poop, dictating signals for the arrangement of the ships in the order of battle. During the action a shell from one of the enemy's batteries exploded close to him. It was a dead calm, and great difficulty was experienced, as well as time lost, in moving the heavy sailing line-of-battle ships, by steamers lashed to their sides. This mode of propulsion was preferred to traction or towing, in order to protect the steamer from the danger of being crippled by the enemy's fire; but in avoiding the danger incidental to towing, other difficulties were incurred, which, together, show that no vessels should be employed in attacking land batteries but such as possess steam power inherent in themselves: for it took an hour to turn the Britannia into the proper position to advance after her anchor had been weighed!"

The Britannia was the flag-ship of Admiral Dundas, and was anchored 2,000 yards from the

batteries. Sir Edmund Lyons's ship, the *Agamemnon*, anchored at a distance of 800 yards. To return to the army and its operations, Sir Howard thus sums up the story of the campaign.—

"After two months of open trenches, the besiegers have not even arrived within the distance at which a practicable breach can be made in the works of the place; and, even were such breach effected, they would only be at the point of commencing the most difficult and most murderous part of the attack in advance of the third parallel—the passage of the ditch and the ascent of the ramparts. Nothing less than continuing the approaches to the counterscarp, and laying the whole length of the two lines of rampart in ruins, will allow an assault to be made with any rational hope of success, more particularly if there should be loop-holed walls and stone casemates in the ditches. But, should the rocky nature of the ground prevent the continuance of the approaches by sap, and an assault be attempted, it is plain that an immense loss, as at Badajos must be sustained: the troops marching over a great extent of open ground will be opposed in front and flank by the fire from all the works in the place; and should the remains of the weak and disordered columns arrive at the ditch, they would have to attempt the passage under a deadly fire of musketry and incendiary missiles, as well as of the artillery from the flanking-works of the fortress, all of which it appears have been vastly improved, extended and strengthened since this protracted siege commenced, and especially whilst active operations against the place have been suspended, or prosecuted with little vigour: all this is independent of the resistance which would be made by the troops of the garrison, strengthened as those troops would then be by the army encamped within the lines. Nor does it appear that a successful assault of those outworks would enable the allied armies to take and occupy the town, nor open the port to the ships of the combined fleet, *until the commanding position on the northern side shall have been taken likewise*. Thus, only, can the fortress and arsenal of Sevastopol, and all it contains, be captured."

Thus it would seem, in the opinion of this writer, that the whole campaign, from the glorious day at Alma down to the present moment, is a blunder—the responsibility of which lies between the military and administrative departments. Winter prospects in the Crimea—according to the authority we quote—are anything but pleasant.—

"Active operations against the entrenched position on the southern heights of Sevastopol having been suspended, the safety of the allied army through the winter is become a matter of painful interest. After an unopposed landing, most skilfully and gallantly conducted by Rear-Admiral Sir Edmund Lyons, under the orders of the Vice-Admiral Commanding in Chief, in the manner practised at Aboukir in 1801, and a series of brilliant exploits in the field, in a few short weeks the allied army, disappointed in its expectations of speedy and complete success, finds itself shut up and besieged in a *cul-de-sac* in the remotest corner of Europe; while large portions of the fleets are to be employed throughout the winter, in a stormy sea and at all risks, in conveying to the beleaguered troops succours of the first necessity, and in which service so many ships have been already lost. Here the whole of the British army, almost to the last man, must remain, depending for every article of subsistence and warlike stores, as well as of shelter from the inclemency of the weather, on supplies sent from France or England. Whatever may be done to provide for the safety, comfort and repose of the army throughout the winter, there can be no rest for the fleet. The ships will have to encounter a more formidable enemy than that which menaces the land army, in having at all risks to force their way through a stormy sea, which cannot be navigated with safety at this season, in order to convey to the imprisoned troops the supplies without which they must inevitably perish, or be compelled to surrender to the enemy. As it happened in the blockades during the war with France, so may it happen in this. When the fleets shall be compelled by the weather to get as far from the land as possible, or

run for shelter to remote harbours of refuge, opportunities will offer, long before the combined fleets can resume their stations on the coast, for the Russian steam-ships, of which there are many yet unhurt in Sevastopol, to pounce suddenly on vessels freighted with succour, as they attempt to approach Balaklava Bay. This bay is small, its anchorage is bad, and, from what happened to the ill-fated Prince, it is evident it is not easily accessible: thus serious interruptions will take place in the arrival of supplies to the allied army by the only line of communication with their remote bases in France and England. *Those persons are seriously mistaken who assert that the command of the sea by the fleets of England and France will always enable the allies to convey reinforcements and supplies of every description to their respective armies in the Crimea with greater promptitude than Russia can send troops there by land:* but unless the allied admirals be endowed with power to 'ride the whirlwind and direct the storm,' the contrary, during the tempestuous months of winter, will be found to be the fact;—of this too ample evidence has been afforded in the fearful wrecks which have lately taken place on the coasts of the Black Sea. It may indeed be feared that reinforcements will reach the enemy in the Crimea by land, with greater certainty than they can be supplied to the allies by sea from England or France, when snow and frost shall have rendered steppes at present impassable with wheel-carriages, easily and rapidly traversed by sleys and sledges."

In the new campaign, if Sir Howard be a true teacher, the work must be recommenced, and a decisive movement made once more on the Alma and the Belbec. As he says,—

"Whenever the allied army shall, happily, be well furnished with provisions, stores, and comforts of every description; whenever it shall be strongly reinforced, and re-equipped with all the means necessary to enable it to resume offensive operations—horses and beasts of burthen can scarcely be expected to survive the winter, from want of forage and shelter—those operations must be conducted in a manner very different from that which has ended by placing the army in its present perilous predicament. If it be true, as undoubtedly it is, that the capital error lay in invading the Crimea with so small a force, and in besieging a strongly-fortified place without having previously invested it, a force adequate to the retrieval of those errors should be sent out; but no greater force should be sent to the southern side of Sevastopol than would be sufficient to render the position at present occupied by the allies quite secure: rather it would seem that a force sufficient specially to invest and attack the town on the northern side should be sent out. Eupatoria should be secured: it was useless as a base point when the attack of Sevastopol by the north side was abandoned, but it will be highly advantageous should an attack on that side hereafter take place; and effectual means should be taken to prevent the enemy from communicating with Sevastopol by the line from Perekop. No siege should ever be undertaken in any seat of war till the enemy in the field shall have been defeated, and completely driven back by the covering army of the besiegers, so that the operations of the siege may be carried on undisturbedly. This might have been done by the allies, had the descent on the Crimea been made at an earlier season, with a force larger and better provided with the means of more effectually carrying out the object of the expedition. An army of 70,000 men, of such troops as those of the allies have proved themselves to be, might, as the Duke of Wellington said of his army in Spain, 'have gone anywhere and done anything.' It would be a great error to land all the force that may be provided for carrying on the war in the Crimea, in 1855, at Balaklava; and strategical combinations very different from those recently made must be formed for the operations of the coming year; but upon this subject the author, for obvious reasons, declines to enter."

We have allowed Sir Howard Douglas to speak for himself at some length: and we leave our readers to form their own judgments on the case here laid before them. For ourselves, we do not share in all the gallant General's fear, or

feel disposed to accept all his calculations. As a professional writer, he is bound to ignore many things that other people need not overlook. Inkermann was won in defiance of theories; and when the occasion calls there is always an amount of enthusiasm and of devotion developed in an army which will stand for a force not to be expressed by Cocker in his arm-chair.

This fourth edition of a standard book is much improved. It contains various appendices and a serviceable index.

A Handbook of Proverbs; comprising an entire Republication of Ray's Collection of English Proverbs, with his Additions from Foreign Languages, and a complete Alphabetical Index; in which are introduced large Additions as well of Proverbs as of Sayings, Sentences, Maxims and Phrases. Collected by Henry G. Bohn. Bohn.

A book like the present was much wanted, as a glance at its title (which, to begin with a proverbial saying, is as long as the title of a Spanish Don) is sufficient to show. There are many collections of proverbs in existence; but, up to the present time, that made by Ray, the celebrated naturalist, and first published in 1672, remained the standard English one, and unfortunately was unprovided with an index. The great advantage of this 'Handbook' by Mr. Bohn is, that it has an Index. You can now catch your proverb, which is the first preliminary. But we have yet no book to do for English proverbs what Erasmus has done for the "Adagia" of antiquity,—explain, illuminate and expound them. Meanwhile, Mr. Bohn's book is certainly in the main what it professes to be,—and if the same could be said of all books, what a literature should we have! We differ from him as to the propriety of inserting all these "sayings, sentences, maxims, phrases," &c., and think their place might be better occupied by a larger infusion of foreign proverbs and a more searching collection of English ones. In a handbook of "proverbs" we should have *proverbs* only. "Set a thief to catch a thief," is an unmistakable proverb,—but, "We should never remember the benefits we have conferred nor forget the favours received," has no more business in a 'Handbook of Proverbs' than it would have in a 'Handbook of Epigrams.' If such maxims are to be inserted, on what ground will any short saying be kept out?

The question, "What is a Proverb?" however, is, simple as it looks, one that has never yet been satisfactorily answered, from the days of the folio of Erasmus to the duodecimo of Mr. Trench. It is like the "What is a pound?" of the financier,—or the "What is a gentleman?" of the herald. Everybody knows—or rather everybody feels—when he hears a genuine proverb,—yet no definition has been given which includes all it ought to include, and excludes everything else. It is one charm of the Proverb that it belongs to all classes of men. It has occupied the attention of the greatest writers;—it lives on the lips of the poorest and humblest of mankind. There is undoubtedly a peculiar interest excited when we see an Erasmus labouring on a saying which perhaps found its way into literature originally from the lips of a fisherman of the Archipelago or of a Campanian boor.

Let us speak first of Erasmus's own definition. There was a time when he was as popular a writer in Europe as Dumas,—but that day has passed, never to return; and to quote him is like quoting an ancient. His 'Adagia' was one of his earliest works, and underwent frequent addition and improvement at his hands. After commenting, in his section, *Quid sit paremia*, on the difficulty of making an accurate defini-

tion, he finally determines on one—which we will take the liberty to translate,—and pronounces a *paræmia* (otherwise *adagium* or *proverbium*) to be “a celebrated saying, remarkable for a certain shrewd novelty.”

Here we observe a distinct perception of the qualities which we all recognize in hundreds of proverbs. Presently, he ingeniously remarks that the novelty or freshness of expression often constitutes the saying a proverb; for that if you said, “Drunken men speak truth,” you would not be uttering one, while *In vino veritas* is an indubitable one. But still his definition is not invulnerable. Mr. Trench, in his pleasant little book, observes that Erasmus defines all proverbs in terms only true of good ones; and that “in rigour the whole second clause of the definition should be dismissed, and celebrated saying (*celebre dictum*) alone remain.” Still, “celebrated saying” would obviously be very imperfect,—for the question is, how does a proverb differ from other celebrated sayings? “*Et tu, Brute*,” for example, is a celebrated saying,—but we should certainly not think of calling it a proverb.

Erasmus goes on to show that we must carefully distinguish a proverb from a mere sentence, apologue, apophthegm, or joke; and—whatever we may say of his definition—he undoubtedly has admirably illustrated the subject throughout his book,—which, too, for the mere reading it shows, is a wonder.

We now come to Camden, who collected proverbs, and whose definition has found favour in the eyes of most of our encyclopædists. He pronounces a proverb “a concise, witty, and wise speech, grounded upon experience, and for the most part containing some useful instruction.” This is excellent, but it is not final. A proverb is not necessarily witty, though many proverbs are so,—and a saying might have all these qualities without being a proverb.

Fuller’s definition is characteristic, and equally good in its way. “A proverb,” he says, “is much matter decocted into a few words.” And he adds, that “six essentials are required to the completing of a perfect proverb, viz., that it be short, plain, common, figurative, ancient, true.” We demur to the necessity for its being “ancient,” for new proverbs arise frequently (let the reader watch, and instantly seize them), and many of the best start from sudden events. And it is absolutely needful that a proverb be “figurative”?

Mr. Trench justly observes, that the most essential quality of all is “popularity”; and undoubtedly the best definition would be one that seized that characteristic as the basis, and exactly determined what else was needful. The definer must take his stand upon that,—and then be wary as to what he adds. The saying, that a proverb is “the wit of one and wisdom of many”—which now circulates as Lord John Russell’s—is a clever *illustration*, but not the definition we require.

We think that the attentive reader will agree with us, that there are but two indispensable elements in a proverb:—currency, or popularity, without which it is not a proverb at all; and, secondly, a distinct profession of something to be practically taught by the saying, which is the only reason why the speaker uses it. The most vulgar proverb professes to have a bit of wisdom in it. The subtlest proverb—however brilliant in mere expression—lives by its sense, not its point, its fancy, or its rhyme. If a man tries a “good thing,” and misses the humorous effect, he has failed; but humour, expression, everything but the mother-wit, are accidents, not essentials of the proverb. In its brevity it resembles the epigram: some sayings accordingly are both; but point, which is essential in

the epigram, is only an accessory—not necessary—to the proverb. If a man uses a proverb, he expects to produce his effect by bringing a bit of “public opinion” to bear on the conversation. Its value is, that you know it already—the very thing which would be fatal to a joke. It is not of the least consequence who said it first. Nobody inquires who invented this or that proverb; whereas mankind insist on attributing *bons-mots* to individuals, and many accordingly are fathered on the wits of each succeeding generation. How is this? Because the mass of people feel that they are not witty, but everybody hopes that he has natural good sense—native wisdom, and feels that he has a property in a proverb along with the general public. A proverb, then, is professedly wise and professedly common. If it misses either of these characteristics it does not belong to the class at all; and all that can be added to these by expression, &c. belongs to the department of ornament,—may make the saying a more brilliant proverb, but not more of a proverb. The definitions we have dealt with fail to dwell sufficiently on the currency, or the practical purport; and by dwelling, on the other hand, on the “conciseness,” “novelty,” and the like—leave the door open for the admission of mere apophthegms, and epigrams, and maxims. Maxims, indeed, may be often mistaken for proverbs; but in strictness they are moral sayings, which have not that *practical application to common life* which constitutes the vital part of a proverb, and first gives it currency. “A popular saying with a practical object” would include, we think, the mass of proverbs; and though some of the more refined ones appear to demand higher praise,—yet, *quoad* proverbs, they owe their *stamina* to the characteristics therein attributed to them.

In truth, the proper sphere of the Proverb is practical every-day life. It is common because it is useful, and its utility was early so deeply felt, that it spontaneously shaped itself into form and took wing. The best parallel to it is found in the Song. The national song cannot be traced to an author. It has lived by its own attraction,—not, like the maxim, because it has constantly been repeated by the teacher,—but, like the proverb, because the popular heart has felt its charm. The two, indeed, are the complements of each other,—one representing the popular understanding, the other the popular heart; one the mother-wit of a nation, the other the sentiment of the nation. Proverb and Song are brother and sister. A great attraction in both is the artless spontaneity from which they originally sprang. Can one fancy a man sitting down, pen in hand—“Come, I will write a proverb!” Not at all. In some happy hour public experience finds a voice in a genially organized speaker; everybody says—“that’s my saying, only I somehow never expressed it,”—and lo! a new proverb is born into the world!

Herein lies the human genial force which draws to proverbs great and warm minds and hearts, and gives them a place in literature. Socrates used them; Plato used them; Cicero used them. Herein was their attraction for such men as Cervantes and Walter Scott. Both have largely employed the proverbs of their countrymen, feeling that in so doing they were communing at once with the whole minds of the country. Swift was in the habit of extemporizing them, and attributing them to his “grandmother.” Franklin has made the happiest use of them,—and may be said, indeed, to have been born with a proverbial mind. It is amusing to see how they continually get the better of Chesterfield, the man of artificial graces, who, though he prefaces them with “as the vulgar say,” or “to use a low saying,” yet perpetually *does* use

them, and so pays them the highest compliment in his power.

This ‘Handbook’ will give English readers the power of following out these and similar views, in their application especially to the proverbs of England, with a larger store of examples, in a more convenient form, than has hitherto been within their reach.

Life of William Etty, R.A. By Alexander Gilchrist, of the Middle Temple, Barrister-at-Law. 2 vols. Bogue.

THE following—which we cite by way of text—is Mr. Gilchrist’s second paragraph:—

“The house of William Etty’s birth, in 1848 threatened by the projected course of one of those sweeping improvements, which during the last thirty years have desolated the once venerable city (York), stands to this hour: the survivor of more picturesque neighbours. It is situated in a street,—Feasegate, No. 20, Feasegate,—which, with the adjoining straight ‘gates,’ or ‘ways,’ Jubbergate, Spurriergate, Davygate, in his boyhood retained an architectural and domestic guise. The ground, now cumbered by unlovely blocks of sordid brick, was enriched by grey, home-like aspects, erections clothed with character and sentiment. Where, in the present or past year, unsightly gaps testify to recent demolitions ‘by Act of Parliament,’—and to the failing funds of the iconoclasts,—sixty years since a pleasant company of quaintly-gabled forms laid their peaked heads thoughtfully (as it were) together. From early days, the embryo painter might feed his quickening eyes with many a carved conceit and graceful outline, or the shifting play of light and shadow on those time-worn fronts; there, smiling brightly in the upper sunlight, here, dusky in the lower gloom.”

The above extract is introduced at the outset to spare our readers any disquisition on the style in which this new biography is written. They may be assured, however, that Mr. Gilchrist does not improve as the work proceeds. Solemnity seems to be more highly prized by him than simplicity, and the tricks of certain humourists to have served him as model, rather than such fluent, well-balanced periods as make a book readable and possible to be read aloud. We hardly imagine that the most patient of hearers could sit through a chapter of the history. The mixture of present and past tenses,—the perpetual interweaving of small quotations,—the alternation of colloquial familiarities with sesquipedalian epithets,—compose a maze, through which patient critics must be content to find their way with much effort. Nor can they suffer, as we have done, from such want of taste in execution, without misgivings that they may be suffering also in the nature of the matter selected. Mr. Gilchrist seems to have had a mass of correspondence placed at his disposal; and the monotony of extract made therefrom is curious. Did we look merely at the fragments from Etty’s letters which are so tastelessly worked up into this composition, we should have fancied that we were dealing with a landscape-painter, and not with the historical artist who enriched English galleries with ‘Judith’ and ‘The Sirens,’ and whose figure-pieces gained for him so peculiar a reputation. Though Etty had not the pen of a ready writer, he could paint with words. Though he had not the glib tongue of a diner-out, nor the persuasive power of a poet’s social eloquence,—he had a racy use of epithet; as when he characterized Turner’s late works as “fiery abominations.” We cannot but conceive that some of the varieties, humours, and affections of such a man have either been overlooked by Mr. Gilchrist, or else sacrificed in his determination to place his subject in a picturesque light. Enough concerning the manner of the book.

The parents of William Etty were Methodists.

His father was a miller and gingerbread-baker in some renown; his mother was a clever and superior woman, who managed her husband.—

"Etty's earnest portrait, painted in the decline of her life and the dawn of his genius, records a face, beautiful, in a kind which triumphs over years,—perhaps gains by them. An eagle-faced, sibyl-like woman: in feature,—the aquiline nose, deep-set eyes, compressed lip,—of Roman decision; the expression, piercing, eager, intense, softened by sadness,—perhaps dimmed by care."

Almost from the day of his birth, in March, 1737, William Etty tried to draw with chalk "on each available plank of shop or mill, or on the blank windows of some empty house." Sometimes the field to be scrawled over was furnished by "the broad sheets of iron and broader shop-floor" of "obliging Mr. North," "a neighbouring whitesmith." Esther Etty, his mother, is described as having had herself some turn for decoration, the humblest form of design; and she seems to have been early aware of her boy's propensities, since, by way of reward, she promised him the use of "some colours mixed with gum-water." But he was put to school without any definite purpose of developing this talent. At school he was known as "a very still boy," whose chief delights were sketching in his copy-books,—feasting his eye for colour on "the Chinese figures and painted chests of the grocer,"—and haunting York Minster for the sake of its painted glass windows and the sound of its organ. Those who love to trace the connexion of the Arts, and who lean towards a belief that there is no such thing as a solitary gift, however one may be destined to outgrow its kinsfolk,—will find corroboration for so pleasing a fancy in the perpetual references to organ-music, artlessly let drop by Etty in his letters and journals. We might speculate further, and hint that his appetite for gorgeousness may have been quickened by early starvation,—having often observed the same propensity strong among those born and brought up in nonconformity.—Be these things as they may, betwixt the years of eleven and a half and eighteen, Etty had to abide the test and training of stronger contradictions than those of Methodist rule, having been apprenticed to a printer at Hull. Here he is said to have worked away diligently and scrupulously,—in every spare second of time sketching, drawing, painting, and nourishing his tastes by reading.—

"A collection of the crude attempts at drawing of this period has been religiously preserved, and bound into a volume, by the son of a journeyman in the same office, named Walker. Some of these sketches (in pencil) were thrown off on stray scraps of paper."

Etty's attempts are described as sketches of every conceivable object. One day the apprentice managed to make up a few colours in oil, and "painted a country church on a piece of tin about six inches square." On another, he turned a bad shilling to account by etching on it "a little bird the printers had seen at a mechanical exhibition, which started out of a box and whistled a few tunes."

A vocation so decided as that illustrated by the above traits—in one, moreover, who had "earned the character of being a well-conducted, industrious lad"—could lead to only one issue. At the close of his apprenticeship, William Etty wrote to an uncle, who was a gold-lace merchant in London, entreating him to assist him in his desire of becoming a painter. After some hesitation, an invitation to London came.—

"On his bidding adieu to native York, the provident mother would have packed with his other necessities the printer's apron. He refused to take it; would follow his true calling, and that only: 'if he got but threepence a day at it.'"

It should be here commemorated, that many

a year elapsed before success in the least justified the step so resolutely taken by the Yorkshire boy—and that hence, for a time, he had to rely on family assistance. Fortune, as modern painters understand the word, came later still. But Etty quietly and honourably replaced the advances made him in his early youth, besides taking charge of younger relatives when he became the man of substance. The fact may be dwelt on as a contrast to the story of the painter whose biography has been last laid before the world:—the liberally-assisted, early-patronized, and warmly-admired Haydon. Yet Etty, like Haydon, had his dreams of "huge canvasses," and managed, betwixt his apprenticeship and retirement from Art, to complete the nine great pictures which he had proposed to himself should be the master-achievement of his life!

An autobiographical paper some years ago contributed by Etty to the *Art-Union* relates the painter's early hopes, fears, and struggles in London with nature and sincerity. On these we can dwell but briefly, the details having been widely read and often quoted. Having adverted to Haydon, it is only just to that erratic genius to recall that Etty expresses himself indebted to Haydon's zeal and encouragement, as having mainly supported him during his time of doubt and probation. It may be remembered, too, that for a twelvemonth he was Lawrence's pupil. Ten years, however, went by, and though some had recognized him as having an eye for colour, and though Fuseli had found him out as one of the most promising attendants of the "Life Academy," the Painter was still not owned as a Painter. With some idea of furthering his studies, and apparently strong enough to cope with the trials of hope so long deferred, diligently and uncompromisingly, Etty bethought him of foreign travel, and set out for France and Italy.—A kind brother furnished the supplies and the outfit; among the latter a complete tea apparatus,—the packing and unpacking of which was a matter of solicitude and remark to the thoroughly English traveller. But it mattered not that Etty could study the treasures of the Louvre, could see Italian pictures, and held the means to proceed from Florence to Rome and to Naples if it so pleased him,—he carried with him such love of English ways (symbolized in that teapot) and of English faces, as made it impossible for him to abide on the Continent, even for the sake of Titian, Michael Angelo and Raphael, of Italian costumes and Italian skies. Home he wrote to his brother, pleading his home-sickness honestly and penitentially,—and home he came, after a three months' absence. Six years later he learned to endure France.—

"I wish," exclaims Etty in a long subsequent York Lecture (1839),—"I wish I could impart even a faint recollection of the impression made on my mind by" that "First Sight of the Louvre," many years ago.—After entering its portal, and being accosted by the *portier*, you are struck with the magnificent *Escalier*—its columns of marble, its lofty-painted Ceiling, peopled with gods and goddesses, and allegorical pictures,—its carved work and cornices of white and gold:—the Crowds pouring in and out, without money and without price. You feel almost overpowered, at first. But led on, through an ante-room full of pictures, to the grand expanse of the Great Room, containing the *Marriage in Cana*, by Paul Veronese, and other great works; you cast your eyes to the right, up the almost interminable Vista of its Long Gallery; filled with the spoils of Rome, Florence, Venice, Antwerp, and Holland,—the *chefs-d'œuvre* of Art for many Centuries;—peopled with busts of the Master-Spirits who produced them,—Spirits, 'enshrined in a temple worthy of them. This, indeed, was a Triumph of Art. Its impression can never be forgotten. Then, below, were the noble Halls of Grecian sculpture: gods

severe in majesty, and goddesses smiling in Beauty,—in ancient Parian marble, hallowed by Time; the ceilings enriched with paintings, the floors of coloured marbles, the walls lined with *bassi-relievi*. From open doors, into the Garden, you caught a glimpse of verdure, freshness and sunshine."

Italy, too, was duly enjoyed by Etty, on his second visit, as may be seen in the vignettes here introduced by Mr. Gilchrist. The journalist's style is anything but immaculate; but the following passages are full of life and truth.—

"Those who have crossed the Bridge of St. Angelo, peopled with statues,—when the hot sun is shining," Etty, writing seventeen years later, forgets not to mention,—'will know, as I do, that it was no joke; and' will have hailed 'with pleasure the sight of the noble Fountains throwing up in the sunshine their copious volumes of water, glittering like silver; spreading freshness and coolness around.'—The 'three flights of steps to its Portal' ascended,—'lift the massive leathern Curtain,—and you are approaching the sanctuary and Tomb of St. Peter; round which a thousand golden lamps burn, like the Vestal Fires, eternally. * * A glorious Temple.'—'And when the music of the mass swells the Dome and mighty aisles; when Italian sunshine lights up its golden glories: you confess its effect unrivalled, and overpowering.' * * 'Let us leave St. Peter's, and go up that *Scala* on the right, so sunny, light, and golden. You reach the open Corridor, painted by Raffaello and his Scholars, in beautiful Arabesque. Above, in the coloured ceilings, are subjects from the Bible by Raffaello. And there are others, of a moral tendency; of which I have only a slight recollection. They are allegorical. Man is represented. In some, naked: tigers, lionesses, and beasts of prey,—his passions and appetites,—are fawning on him; while he, (like Mr. Van Amburgh of our time), keeps them in subjection. And he sits in peace, like Adam in Paradise, under the vine and fig-tree. In others, the sad reverse is portrayed. They no longer are subject to him, but he to them: and they tear him in pieces.—Let us knock at that door. "*Entrate, Signore!*" says the *Custode*: and you are in the temple of the genius of Raffaello. There, are his celebrated works:—the *School of Athens*,—the Philosophers disputing and promulgating their Doctrines;—*Heliodorus*, driven from the Temple;—the *Incendio del Borgo*;—Paul and Peter stopping the Army of *Attila*, and saving Rome. Over the window behind, is the glorious picture of the *Angel* delivering *Peter from Prison*.—See with what awe he is following his celestial guide, who leads him by the hand; stepping over the guards that sleep in their path. In the centre-part, the awakening St. Peter from a deep sleep. On the right, he leads him forth. On the left, the soldiers watching on the outside, under the dim and cloudy light of the half moon, have been disturbed by the passing of the angel into the prison. One has been dazzled by the effulgence flashing on his armour, and is, for a moment, blinded, and puts his arm before his eyes; but, alarmed, is rousing his fellows. Such, the dramatic invention and power of Raphael."

This time, of course, Venice was not overlooked,—neither was it undervalued, as many a subsequent rivalry in colour of Veronese and Bonifazio and Giorgione testified,—not to speak of such pictures as Mr. Vernon's 'Venetian Window,' where the painter shows that, besides examining the methods of the artists, he had thoroughly steeped himself in the spirit of the place.—Years after this visit, those whose fortune it was in London society to meet a silent stranger, not prepossessing in appearance, not lively in discourse, might be surprised by an immediate change if some speaker by chance mentioned the *Piazza di San Marco*, or *Tintoretto*, or *Bergamasco*, or the portrait of *Violante Palma*, in the Church of *Santa Barbara*, or other of the glories of Venice. There would come a sudden brightness of eye—a quickness of recognition and pertinence of descriptive epithet would waken, which converted a dull companion into an enthusiast,

attractive to see, interesting to hear. By such a moment as this we remember Etty the man.

Had it been possible for us to have here rewritten this biography, or merely to have given an epitome of its leading events—the Painter's leading pictures—in their due chronological order, we should have said, that before this second Italian journey was undertaken Etty had gained recognition as a new painter, by exhibiting his 'Coral Finders' (in 1820) and by painting, on commission, his 'Cleopatra,' for Sir Francis Freeling. While he was in Italy he attracted much attention from discerning persons by the power and richness of his copies. Mr. Gilchrist tells us fantastically that, during that visit, he had to deal with a home love-affair, which distracted him much:—though, so far as can be inferred, his was throughout a case of love without reasonable hope. Through some such experience, it has been said, every artist must pass before he comes to the full use of his genius,—but this question may be safely left to some new poetess, willing to continue 'The Loves of the Poets.'—It is more to our present purpose to recall that, after his return from this second Italian visit, Etty began to be talked about,—admired and considered, rather than liberally commissioned. His 'Pandora,' a "picture of eight or nine figures, begun and finished in six weeks," painted when he was thirty-seven, was bought by his former master, Sir Thomas Lawrence. In 1824 he was elected "Associate" of the Royal Academy. "The latter half of the same year and early months of 1825 were engrossed by his first large picture, 'The Combat, or Woman Interceding for the Vanquished,' a conception, so long as we saw, having occupied his mind." This picture was purchased by another painter,—Martin. About this time he took up his abode in the house in Buckingham Street, Strand, and was joined there by his mother and by a niece, who remained with him for a quarter of a century later, his house-mate, his *confidante*, and his active assistant. We extract a letter, bearing date in the painter's fortieth year, and written, too, after his first magnificent 'Judith' had been painted—to his surviving parent. How far Mr. Gilchrist may have spoilt it we cannot pretend to decipher, but he tells us that—

"The sometimes crude 'Thou' of the original has here been occasionally translated into the more usual pronoun.—'My ever dearest Mother!—Thy letter came when we were very anxious to hear of thee. And we thank God thou art quietest so well. May He continue to strengthen thee is my earnest prayer.—Now, my dear Mother, you say you will do as I would have you. I would have you do as you like best: be assured, that will please us. Don't fret yourself about expense: but if you like your quarters, stay on. If you like to come to me, I and Bessy will receive you with open arms,—and hearts: that is, if your health will permit the journey. God knows it would be a great pleasure to both of us.—Thy Chair is yet there, and thy cat. My house would look like itself, if thou wert smiling in the corner. Could wishing transport you two hundred miles, you would now be by my side. * * If you would like to live with Tom, it would be something towards helping him; and you would be among friends. But I shall be delighted to see thee, and brew thee a *canny* cup of Tea. I still indulge the hope Mr. Cartwright's prediction will be fulfilled:—that thou would'st come back.—Mr. and Mrs. — have proved themselves the only support in thy troubles. Mr. Cartwright has been once or twice to learn how you were; and Mr. Hilton. I breakfasted with Sir Thomas Lawrence the other morning. When he learnt I had a Mother in York, he said, "If I had known that, I would have called to have seen her: I was in York lately." So you see, some there are, who treat you with the respect you deserve. Bessy has proved herself what I always thought her, my faithful lass; and is about as much

shocked and astonished as myself. * * I wish thou wert safe and snug in yon arm-chair, taking a pinch of snuff."

There is no need for any one to inquire into "the troubles" which provoked such an honest, homely, burst of affection as the above:—but there is need to protest against the blunders of the retoucher, ventured under the false notion of amending that which is excellent in right of its reality. We cannot but think such a letter worth many a dozen of the prayers in a Haydon's Diary: and shall go on with the record of domestic love for a few pages further. In 1829, after her son had been elected Academician,—after the 'Judith,' his second life-sized picture, had been yielded for a very modest price to the Royal Scottish Academy,—Esther Etty died, at York, aged seventy-five. The following, though in point of composition it hardly gets beyond our daily communications from Sebastopol and Balaklava, cannot be resisted. It is from a letter addressed by Etty to his niece in London.—

"God bless Thee, my dearest Betsey, for writing to York. Thou saved me the object of my journey. Without it, my blessed Mother would probably have been underground'—before the Painter's arrival. 'As it is, thank God! I have seen her dear remains; and followed her till I could no farther.' * * 'I arrived at Barton after a cold and comfortless night, and a hot, sunny day. An hour and a half had yet to pass ere I could cross the Humber. I sat down by a post,—that I sketched years ago, with a view of Hesse Church, on a card that Mr. Bodley has:—I sat down on the bank, near some white stones (which I sketched too); and cast a longing look over the waters. In front, was Hesse spire:—in the distance. There, thought I, rest two of our family friends, whose Fireside and table have cheered us many a winter night, (as dear Walter knows): there they lie in their cold and narrow dwelling. Further on to the right, was the high Church-Tower of Hull. "And near there rests,"—as I indulged the hope,—"my dearest Mother." I looked and thought. The muddy water of the Humber swept by, and murmured on the shore. The sun was sinking behind the hills. What was all the world to me?—She whose smile delighted me, loved and loving, for whom I loved to be praised, knew me not, heard me not. And I could not get near her. The hour of crossing arrived. We drew rapidly towards Hull. How my hopes and fears prevailed! We passed the Humber bank, the Mills, the Jetties,—crowded with people waiting to see the boats land. No welcoming friends were waiting for me. I seemed not expected. Alas! thought I, I am wrong. She has gone, and is, ere this, in her last dwelling. Still I hoped: till I got into the house. Then, all my hopes seemed blighted. "Where is Mother?" "Where is Thomas?" I eagerly asked.—"They are gone to York: she is to be buried to-day."—"Why did they not wait?"—"When did they go?"—"Saturday."—Then there is indeed no hope. I felt desolate and wretched. It was about dark. I seemed as if fallen amongst a city of the dead. All were gone! Some said she was to be buried at eight on Monday morning, at latest; others, they would bury her that day. I had taken this melancholy journey to meet with disappointment.—I had with difficulty got a place for six this morning to York. What would that avail, if she is to be buried at eight? I knew not what to do; at one time, thought of setting off in a post-chaise, and travelling all night. I consulted with Mr. Lowther and Dr. Bodley;—"altogether thought it best to wait." The following morning, "I felt refreshed, and somehow in better spirits:—"enjoyed my ride somewhat. The wind blew freshly; and hope seemed to revive in my breast. Pocklington, Barnby Moor, and Wilberfoss seemed to fly by. And my other love, my darling Minster rose majestically and proudly in the horizon: with a flag on the high main tower, in triumphal token of the main beam of the roof having been fixed. Thank God! there is some comfort yet, when my dear Minster proudly towers over our ancient and venerable York.—When I got into Foss-Gate, Robert Purdon was on the look-out. "Am I too late?"—"No! you are not too late!"

We must add a line or two from a subsequent page.—

"Last Friday, Thomas, Kate, Mr. —, and myself set off to walk to Wilberfoss: where we had a breakfast of cakes and tea, and country-cream, in a thatched cottage. Thomas and I walked to Hayton; as I wished to get Mother's real age, and Register. Which I did. Afterwards, we went to Hull: where I got my dear Mother's ring; which she desired particularly might be given to me.' This, her wedding-ring, hung during the remainder of the Painter's life by his bedside:—attached, in a frame, to the portraits of his Father and Mother."

The above notice has been principally confined to the pursuits, habits, and affections of the man: and leaves him at the moment when the struggle of the artist's life may be said to have ended. Etty's labours as a painter, and the peculiar direction taken by his powers are matters familiar to all who interest themselves in modern Art. That the painter of so many Venuses, Bacchantes, and Nereids, could not escape censure and question from any public, in which pruriency has an eye and prudery a voice, was not to be expected: and that Etty's rapid reproduction of a favourite, and by no means spiritual, class of subjects during his later years, was attended by an accompaniment of censure, is not to be denied. Mr. Gilchrist, however, does stout battle for the painter's simplicity of life and purity of heart, and, apparently, with good knowledge of facts and feelings.

MINOR MINSTRELS.

The Angel in the House.—*The Betrothal.* (Parker & Son.)—The gentle reader we apprise That this new 'Angel in the House' Contains a tale not very wise About a person and a spouse. The author, gentle as a lamb, Has managed his rhymes to fit, And, haply, fancies he has writ Another 'In Memoriam.'—How his intended gathered flowers, And took her tea and after sung, Is told in style somewhat like ours, For delectation of the young.—But, reader, lest you say we quiz The poet's record of his She, Some little pictures you shall see Not in *our* language but—in *his*.—

While thus I grieved, and kiss'd her glove,
My man brought in her note to say,
Papa had bid her send his love,
And hoped I'd dine with them next day:
They had learn'd and practised Purcell's glee,
To sing it by to-morrow night.
The Postscript was: Her sisters and she
Inclosed some violets, blue and white:
* * * * *

Restless and sick of long exile
From those sweet friends, I rode to see
The church-repairs; and, after awhile,
Waylaying the Dean, was ask'd to tea.
They introduced the cousin Fred
I'd heard of, Honor's favorite; grave,
Dark, handsome, bluff, but gently bred,
And with an air of the salt wave.

Fear not this saline Cousin Fred, He gives no tragic mischief birth—There are no tears for you to shed Unless they may be tears of mirth.—From ball to bed, from field to farm, The tale flows nicely purling on.—With much conceit, there is no harm, In the love-legend here begun.—The rest will come another day If public sympathy allows;—And this is all we have to say, About 'The Angel in the House.'

Sonnets on Anglo-Saxon History. By Ann Hawkshaw. (Chapman.)—This book has at least two merits,—it has no Preface and it has a purpose. We hear no venial nonsense about the entreaties of friends, and no foolish, vapouring defiance of critics and criticism. The work has an artistic shape; and is, in reality, not a bundle of sonnets, but one long poem, rather loosely connected, on the chief events of Anglo-Saxon history. As sonnets they do not rank very high, for, though metrical and not wanting in vigour, they require the full diapason that should consummate the fourteen lines,—and

instead of one thought fully worked out they often contain two or three thoughts crowded and unelaborated. We can scarcely class Miss Hawkshaw as an addition to our female writers, for though tender, polished, pious, and sincere, she aims more at the manly excellencies of Wordsworth than the plaintive cadence of Mrs. Hemans or the Byronism of L. E. L. A careful equality (rather unprogressive and past growing) is the peculiar feature of her writing. The following sonnet is sufficient to show her style.—

Alfred the Great.—Romney Marsh, Kent.

The fisher's boat rocks idly on the sea,
The sheep are resting on the grassy hill,
Where village children wander at their will,
Blithe as the singing birds, almost as free;
And are these all the thoughtful man can see
Where once intrepid Alfred and his band
Drove the fierce Northman from the Kentish strand?
Fair is the scene, yet other things there be
Than meet the eye; and with this seeming good
How much of evil mingles, who may say?
Rightly we shudder at those days of blood;
But ignorance and crime still bar the way,
And avarice hugs his bags of golden dust,
And long repose brings idlesse and false trust.

Miss Hawkshaw's subjects are well selected, and chosen, with poetical taste, rather for their suggestiveness than for the pictures they present.

The Romance of the City; or, Legends of London. By Emma Whitehead. (Published for the Authoress.)—Miss Whitehead is the daughter of a London merchant, and the poems are founded on old legends of her native city. The thought is original, but has the defect of shutting out the writer from external nature, and immuring her muse in a ghastly prison of brick and mortar. Her subjects are the stories of Whittington, Jane Shore, the Princes in the Tower, the return of Cœur de Lion, and a legend of Cripplegate. In 'The Maid of Palestine' she tells in facile and pleasing verse the tale of àBeckett's mother, the Syrian maiden, who followed her crusading lover back into his own land. Knowing but one English word that love had taught her, she repeated "Gilbert! Gilbert!" through the streets till she found by chance the lover whom she sought. The Moorish blood is traced in the hot anger and unforgiving pride of the murdered prelate. Miss Whitehead has rather marred her story by making her Maid of Palestine talk English fluently; and when she discovers her lover, shriek, "flush," wildly gaze, and with a melodramatic outburst faint, exclaiming—"Gilbert? ah! yes, thou art!" The story of 'Milton' is out of place in the collection, as it is related to have taken place in Italy, where a lady crowned him with laurel as he lay asleep under a tree. The opening of this short poem is, perhaps, one of the happiest extracts we can give of a writer who is too diffuse for easy selection:—

Deep in a bowery and sweet-scented grove,
Where the green banks with varied buds were wrought,
Like a wild garland sportively enwove,
Of every ray from out the iris caught,
Cast into gems with many colours fraught;
There was descried a little opening glade,
That shone, like beauty, when 'tis seen unsought;
And this fair vale, amid the leafy shade,
Was by the glancing day-beams to the view betray'd.

Around there rose, thick-cluster'd, many trees,
Whose pliant branches thrill'd with verdant shoot;
The wilderness of the Hesperides,
Ere yet bereft of its fam'd golden fruit,
Could not have boasted plants of richer root.
The balmy wind that stirr'd amid the boughs
Made music like the plaintive lover's lute,
When it is strung with sighs, that e'er arouse
Soul-breathing peace, divine, and sweeter than his vows.

—More severity of metre, more condensation, and more attention to dramatic point are needed by Miss Whitehead.

Minor Poems. By James Sykes. (Scarborough, Beeforth.)—These poems show some progress in metrical writing; but not much in metrical thinking. They are mere prose forced into harmony,—the writer having more ear

than imagination. Why should the poplar be "maniac"? The writer seems involved, or pretends to be, in the metaphysical miseries of the Tennyson school—miseries of the head, as Byron's were of the heart:—both, perhaps, very often proceeding from that source of all evil—a bad digestion. The following lines on despondency have a gauzy, dreamy effect that raises the idea above itself.—

Sometimes, when nights are foul and dark,
And silent meteors cleave the gloom,
A ripple sounds anear my bark,
And ghostly voices go and come.

And shadowy sails flit by, and show
The barks that gaily rode with me,
When hope and youth sat by the prow,
And looked across this desert sea.

Oh for the sunshine and the breeze!
O'er glancing waves we swept along!
No thought of pause or slothful ease,
With now a silence, now a song!

A wanderer from my native land,
I drift across this trackless sea.
Yet, O my God, my heart and hands
In storm and sunshine stretch to thee.

The Tour: a Poem in Two Cantos. By W. F. P. (Hodges & Smith, Dublin.)—How long will authors shelter the eager vanity with which they rush into print under the conventional pretence, of "the persuasion of friends"? If such friends exist, the prophesied times must have already come upon us, when, as it was declared, "a man's foes should be they of his own household." Let us sweep such things into that common dust-hole where "gentle reader," "gentle muse," "Phœbus' fire," "sombre grove," and all such old stage-lumber rot for ever. Conventional language is the nightmare that bestrides invention,—the Old Man of the Sea, that chokes originality,—the Old Man of the Mountain, whose emissaries destroy all daring thinkers.

History of the French Revolution—[*Histoire de la Révolution Française*]. By Louis Blanc. Vol. VI. Paris, Langlois.

As M. Louis Blanc approaches the climax of the Revolution, his narrative gains in rapidity, and becomes more brilliant as it becomes more difficult. It is still ample and precise; but the characters march as in a procession, and the events are arranged as in a drama. The action has been carefully studied; the portraits are faithful; the accessories are complete; and though the political view is peculiar, the integrity of the writer is no less remarkable than the art with which the multiplicity of incidents, interlaced by complex relations, are arrayed in simple and continuous order. This new volume contains, like those which preceded it, a number of elaborate pictures,—each a specimen of historical condensation. Not, however, that the style is brief,—for M. Louis Blanc uses a copious rhetorical diction,—but he groups events as well as characters, and centralizes the interest of an epoch in the account of some memorable hours. The fifth volume began and ended with a massacre; the sixth opens upon peaceful days and closes with preparations for a European war. In the interval the vicissitudes of French affairs were marvellous; and M. Louis Blanc had an opportunity, which he has not neglected, of describing France under two aspects, both singular, both rare, and one essentially opposite to the other.

After the massacre on the Champ de Mars—that gigantic crime of the dynasty on which so few historians insist—Paris and the provinces fell into a trance. The people were motionless; there was no circulation in the streets, no excitement at the theatres; many of the journalists ceased to write, others issued from secret haunts their melancholy diatribes; the clubs were no longer filled with eloquence or with

the applause it won; the *tricolor* disappeared, and the white flag replaced it; the population had been stilled and astonished by the *fusillade* upon an unarmed crowd; and little was audible except the triumphant but premature exultations of those who instigated the outrage, who played Canute to the waves, and fancied that an ensign of martial law displayed at a window of the Hôtel de Ville would arrest for ever, as it had checked for a time, the irresistible course of the Revolution.

The other half of the parallel represents France when it had been announced from the National Assembly that "the country was in danger." The French army had retreated without a battle; an enemy was in full march upon the frontier; great military squadrons had been treasonably disbanded; and Marie-Antoinette, in Paris, waited with anxiety and joy to hear the uproar of an invasion in the capital. We see her in M. Louis Blanc's history pointing to the moon and recounting to Madame Campan how, before another month had passed, the monarchy would be rescued,—how the princes would arrive with their troops,—how the Prussian king would conquer,—and how this foreign inroad would restore France to peace and glory, the reigning family to its original power, and the Constitution—to the limbo of abstract ideas. While she spoke, France was busy in other ways: there was a martial insurrection to meet the enemy; the roads were covered with recruits; villages were deserted; peasants gave their last coin; women told their only sons to go; and the names of six hundred thousand French citizens were shortly inscribed on the military roll. This spirit found a voice in the Marseillaise Song; and while the spontaneous levy went on, the Assembly in Paris swore—each man with his face pale and his arm lifted—that nothing should be thought of or cared for until the nation was saved and free. A moment afterwards, the King appeared, and in cordial words declared that his dearest wish was thus fulfilled, and then returned to the Palace to wait for the completion of a garment proof against bullets and daggers! Here was matter for many a brilliant page,—and M. Louis Blanc has taken advantage of it. The scenes we have enumerated he describes, with all their extraordinary details, in passages of choice and admirable composition. But between the two events—the massacre in the Champ de Mars and the great chorus of battle hymns in France—there was a series of episodes to be developed, which it required much skill to introduce, with an explanation of their real importance and their bearing on the historical results that ensued.

The schism in the Jacobin party,—the rise of the Feuillants,—the growth and decay of the Gironde,—the close of the Constituent and the election of the National Assembly,—public reconciliations between the King and the people,—and private negotiations between the Court and its adherents beyond the frontier,—Austrian menaces to France and retorted threats of France to Austria,—conspiracies and leagues in Europe,—dissensions and errors in Paris;—all these varied elements are brought into the narrative before it pauses. Some new characters, also, are introduced, and the positions of others are materially change^d. Robespierre comes more distinctly forward as the leader and teacher of the popular party; Marat rises like a phantom behind him; Camille, for awhile, is borne in triumph through the streets; Isnard makes his startling *début* in the Assembly; the Duke of Orleans offers to exchange his dynastic claims for the rights of a citizen; Madame Roland enters the council-rooms of elegant politics; and Marie-Antoinette is portrayed

more unmistakeably than in previous portions of the narrative. The Emperor Leopold, of Austria, is removed from the stage, whether by poison or by disease will never probably be decided; and Gustavus Adolphus comes on for the last time, with Ankerstroem making his way towards him, pistol in hand, through the crowd. Another personage appears, who has not before entered history. This is on the 20th of June, 1792—the “day of dupes,” when the Parisians filled the Tuileries—when the King puts on a red cap and drinks to the nation's health. Dumouriez, wrapped in a cloak, with a hat slouched over his eyes, is in the gardens, while Louis the Sixteenth, with a multitude about him, seeks every method of conciliation. Near Dumouriez is a young officer, who, with an expression of solemnity on his pale, thin face, looks on, as a crowd pushes into the Tuileries. Suddenly, through an open window, he observes the King crowned with a red cap—the Phrygian symbol—and exclaims, “Fools! they should bring cannon, and sweep down the first five hundred, and the others would speedily fly!” This is Napoleon Bonaparte; and in such a manner does M. Louis Blanc introduce the future conqueror, consul, emperor,—on the authority of Bourrienne.

The different attitudes in which the King is discovered form a series of fantastic contrasts. Accepting the Constitution with a voluntary air,—shedding tears as he heard it applauded by the people—swearing to it with shame—weeping over it in his wife's arms—congratulating the National Assembly on the happy union and auspicious harmony of estates in the French realm—sobbing with joy in the theatre—pledging the populace in wine—telling Petion he was a liar,—this miserable prince played out his harlequinade of weakness and insincerity, while Marie-Antoinette, more positive and politic, contended, though vainly, with the forces of the Revolution. Louis the Sixteenth, says M. Louis Blanc, deceived his enemies, his friends, and himself:—“he could not even tell a lie in good faith”!

M. Louis Blanc's conception of Robespierre's character is the most philosophical that has yet been suggested. It is as unlike the conventional portrait, as the historical conspirator is unlike the November effigy of Guy Fawkes. There is no attempt to soften or conceal the harsh features; but there is an effort, necessary and commendable, to relieve Robespierre from the companionship of ogres and cannibals, and to paint him as a political leader, a man of ideas and of systems, instead of a demon who had made a sortie, with a few fit adherents, from the worst haunt in Dante's *Inferno*.

In another respect M. Louis Blanc takes his picture from a new point of view. He denies the moderation of the Gironde. The Girondists, he affirms, inaugurated the system of Terror. On the motion of Isnard persons “suspect” were ordered, under penalties of attainder and death, to return within reach of the law. At the hands of the Girondists the King suffered his worst humiliations; their orations were the most unmeasured in language, and the fiercest in sentiment,—they hurried on, and when they fell, their rivals swept by, partly borne forward by the impetus created by the faction of the Gironde.

The Chinese Empire; forming a Sequel to the Work entitled ‘Recollections of a Journey through Tartary and Thibet.’ By M. Huc. 2 vols. Longman & Co.

In the account of Lord Macartney's Embassy to China it is related that our countrymen entered Pekin like beggars, lived in it like prisoners,

and were driven out of it like thieves. Consequently, they wrote many harsh things concerning the Empire and the people. M. Huc travelled under different circumstances. The “Son of Heaven” protected him; a military escort, armed with lances and adorned with dragons, trotted in the rear of his palanquin; and mandarins, with copper or crystal buttons, assented to his desires. In return for all this courtesy, he is anxious to speak with civility of the Chinese and their manners; and while he warns us not to be enticed by Voltaire's theatrical tableau of authors and patriarchs crowded in sweet social harmony on the plains of Eastern Asia, he refuses to corroborate the testimony of Montesquieu, who describes a degraded people, cowering under a pitiless rule. M. Abel Rémusat had already corrected some of the popular notions respecting China, and M. Huc brings evidence in support of the opinions held by that learned Orientalist. He has had opportunities for studying the subject. Fourteen years' residence in the Empire, and two journeys across its whole extent,—sometimes in disguise as a fugitive, and sometimes in processional pomp as an apostolic envoy,—enabled him accurately to survey the Chinese territory, and the condition of its inhabitants. It must be remembered, indeed, that he was a missionary of the Roman Church, and that he had peculiar objects in view; but allowing for some prejudice, we may add, that his volumes teem with valuable information, and that they contain one of the best pictures of China we have met with since the days of the Dominican pilgrims.

The Chinese, in some respects, resemble the Russians. They like to deceive a traveller. M. Huc was privileged, and, therefore, this hypocritical system was the more fully developed. The mandarins, as well as the common people, were jealous of a stranger's presence in their towns, but sought to throw dust in his eyes by punishing with ferocity any poor delinquent whose insult happened to reach the missionary's ears. He, on the other hand, though a chartered wanderer, had to maintain a conflict with the authorities, who were astounded by his familiar assumption of native dignities. At the first Chinese city on the Thibetan frontier he insisted, in spite of opposition, on continuing his journey in a palanquin. This was bad enough; but the Tribunal of Rites, whose function it is to prevent rebellious displays of grandeur, was fairly horrified when he began to make ready for his “progress.” The wolfskin cap, the checked hose, and the long fur tunic of Thibet were cast aside, and the missionary apostolic arrayed himself in sky-blue robes, and black satin boots with dazzling white soles. So far the mandarins saw, and wondered, but were silent. Next, however, he girdled his loins with a red sash, and put a yellow cap on his head. Then arose a tumult. This, said the mandarins, could by no means be allowed. Red sashes and yellow caps were only worn by the Imperial family, and M. Huc must take them off. M. Huc refused, and went further. Under his yellow cap he had a wig, with a tail reaching almost to his knees. His eyebrows were shaved, a yellow wash swallowed his face, and with his European nose buried in enormous moustaches, he could scarcely be distinguished from a Chinese proper.

When he sketches his own appearance so freely, we may expect the missionary apostolic to exercise little reserve in his delineations of others. Accordingly, the awful personages of the Flowery Realm are treated by him with a levity the reverse of respectful. One great mandarin he describes as “short, broad and round, with a face like a ball of fat.” Another has “withered hands, exactly like those of a

monkey.” An Inspector of Crimes is “a wrinkled old man, with a face like a polecat.”

Descending from the Thibetan plateau, between mountains bright with flowers, he passed over an enchanting country, fruitful, full of inhabitants, and wearing the beautiful dress of an Eastern June. An odour of musk seemed to impregnate the soil and people; and, says M. Huc,—

“Travellers in remote countries have often remarked, that most nations have an odour which is peculiar to them. It is easy to distinguish the Negro, the Malay, the Tatar, the Thibetan, the Hindoo, the Arab, and the Chinese. The country itself even, the soil on which they dwell, diffuses an analogous exhalation, which is especially observable in the morning, in passing either through town or country; but a new comer is much more sensible of it than an old resident, as the sense of smelling becomes gradually so accustomed to it as no longer to perceive it. The Chinese say they perceive also a peculiar odour in a European, but one less powerful than that of the other nations with whom they come in contact. It is remarkable, however, that in traversing the various provinces of China, we were never recognized by any one except by the dogs, which barked continually at us, and appeared to know that we were foreigners. We had indeed completely the appearance of true Chinese, and only an extremely delicate scent could discover that we did not really belong to the ‘central nation.’”

In a country where dinner begins with dessert and ends with soup, we may anticipate some customs irreconcilable with our ideas of civilization. At the great city of Tching-tou-fou M. Huc was brought to trial by order of the Emperor, that his character and objects might be ascertained before he continued his journey. The missionary, or “Devil of the Western Sea,” enjoyed a glimpse of the preparations ere they were complete:—

“The satellites ran backwards and forwards, in their long red robes, and hideous peaked hats of black felt or iron wire, surmounted by long pheasant's feathers. They were armed with long rusty swords, and carried chains, pincers, and various instruments of torture, of strong and terrible forms.”

His introduction to the tribunal then took place.—

“A great door was suddenly opened, and we beheld at a glance, the numerous personages of this Chinese performance. Twelve stone steps led up to the vast enclosure where the judges were placed; on each side of this staircase was a line of executioners in red dresses; and when the accused passed tranquilly through their ranks, they cried out with a loud voice, ‘Tremble! tremble!’ and rattled their instruments of torture. We were stopped at about the middle of the hall, and then eight officers of the court proclaimed in a chanting voice the customary formula:—‘Accused! on your knees! on your knees!’”

It was altogether a burlesque, intended to astonish the weak mind of the “Devil of the Western Sea,” who, however, refused to kneel, and coolly daguerreotyped his judge while the monstrous farce proceeded:—

“He was a man of about fifty years of age, with thick lips of a violet colour, flabby cheeks, a dirty white complexion, a square nose, long, flat shining ears, and a forehead deeply wrinkled. His eyes were probably small and red; but they were so hidden behind large spectacles, which were tied in their place with a black string, that this could not positively be ascertained. His costume was superb; on his breast glittered the large Imperial dragon, embroidered in gold and silver.”

All this “tintamarre and jingle-jangle” ended in leaving the traveller free to increase the pageant of his attendant cavalcade. From that time he received the adulations of mandarins and the homage of the people, though a quick ear enabled him to detect sundry curses and threats, in which the Chinese indulged.

That the Chinaman is reclaimable may be inferred from the knowledge of the quiet gen-

tlemen—with blue tunics and black tails—who give dinners at Singapore; but M. Huc's testimony, on the whole, supports our belief in the barbarism of China, in the slumber of its intellect, in the atrocity of its laws and in the degradation of its manners. They who love a paternal system in the abstract must go elsewhere in search of their ideal. If our readers are not tired of the phrase, they shall look at Chinese civilization from the "Woman's Mission" point of view. A lady authoress of the Flowery Land informs us that—

"When a son is born he sleeps upon a bed; he is clothed with robes, and plays with pearls; every one obeys his princely cries. But when a girl is born, she sleeps upon the ground, is merely wrapped up in a cloth, plays with a tile, and is incapable of acting either virtuously or viciously. She has nothing to think of but preparing food, making wine, and not vexing her parents."

When a proposal of marriage is made, the father of the young girl is applied to, and the following style of answer is considered polished.—

"I have received with respect the marks of your goodness. The choice that you deign to make of my daughter to become the wife of your son, shows me that you esteem my *poor and cold family* more than it deserves. My daughter is coarse and stupid, and I have not had the talent to bring her up well; yet I shall nevertheless glory in obeying you on this occasion."

Their treatment of women is in most respects conformable to this standard; and were not individuals more virtuous than the laws, a family bound together by happy and cordial relations would not often be found in China. M. Huc has probably coloured his report a little in order to heighten his contrast of the social harmonies produced among such proselytes as are made by his brethren—but we see no reason to doubt the general accuracy of his view. As to the justice "administered by learned and virtuous men," which Voltaire extolled, we have already seen a little of its forms. We have now some horrible glimpses of its reality. Among others, M. Huc saw a robber, not condemned, but on his trial.—

"He was suspended in the middle of the hall, like one of those lanterns, of whimsical form and colossal dimensions, often seen in the great pagodas. Ropes attached to a great beam in the roof held him tied by the wrists and feet, so as to throw the body into the form of a bow. Beneath him stood five or six executioners, armed with rattan rods and leather lashes, in ferocious attitudes, their clothes and faces spotted with blood—the blood of the unfortunate creature, who was uttering stifled groans, while his flesh was torn almost in tatters."

Shortly afterwards,—

"The executioners took their places, and soon the body of the criminal was swinging and turning about under a shower of blows, while he uttered terrible shrieks, and his blood spirted out on all sides, and ran down the rattans, reddening the naked arms of the executioners."

Travellers who have proceeded no further than Canton have had better things to say:—but we do not forget that M. Huc is inclined to temper the severity of his judgment on the Chinese. He assails many of the common ideas of their history, denying that they have ever been fixed to any rigid system of government or manners, or that the empire is inhabited by a homogeneous race. They have had more dynastic revolutions, they are more divided in their nationality, and they have undergone more change than any people in Christendom. As to their numbers, however, he confirms the general opinion. Arnot rated the population at 150,000,000, and Macartney at 333,000,000; but M. Huc, adopting a Mantchu census, computes it at more than 360,000,000. His reasoning on this point is inconclusive, for he admits that, travelling by the roads, in the central provinces the villages are few, and the waste lands like the deserts of

Tartary; while only along the rivers and canals do populous cities follow each other in continual succession. China has an area eight times as large as that of France, and is yet so thickly inhabited, he tells us, that artificial islands are launched on the lakes, to increase the available surface,—and yet so pious a man as M. Huc is half tempted to wish for a plague to consume the redundant people.

No one, however sceptical on the point of Chinese civilization, doubts the ingenious industry which it fosters. With the exception of falcons trained for hunting, of pigeons for carrying letters, and of the ostriches ridden in South Africa, we know of few instances of which the fowls of the air have been turned to human use, unless for food. But the Chinaman makes a cormorant fish for him.—

"Just as our pleasant journey on the Pinghou was approaching its termination, we encountered a long file of fishing-boats, which were rowing back to their ports. Instead of nets, they carried a great number of cormorants, perched on the edges of the boats. It is a curious spectacle to see these creatures engaged in fishing, diving into the water, and always coming up with a fish in their beak. As the Chinese fear the vigorous appetite of their feathered associates, they fasten round their necks an iron ring, large enough to allow of their breathing, but too small to admit the passage of the fish they seize: to prevent their straying about in the water and wasting the time destined for work, a cord is attached to the ring and to one claw of the cormorant, by which he is pulled up when inclined to stay too long under water. When tired, he is permitted to rest for a few minutes, but if he abuses this indulgence and forgets his business, a few strokes of a bamboo recall him to duty, and the poor diver patiently resumes his laborious occupation. In passing from one fishing ground to another, the cormorants perch side by side on the edge of the boat, and their instinct teaches them to range themselves of their own accord in nearly equal numbers on each side, so as not to disturb the equilibrium of the frail vessel; we saw them thus ranged throughout the little fleet of fishing smacks on Lake Pinghou."

The Missionary is a free critic on the aspects and manners of the Celestials, but he allows them the *quid pro quo*.—

"Europeans who go to China are apt to consider the inhabitants of the Celestial Empire very odd and supremely ridiculous, and the provincial Chinese at Canton and Macao pay back this sentiment with interest. It is very amusing to hear their sarcastic remarks on the appearance of the devils of the West, their utter astonishment at sight of their tight-fitting garments, their wonderful trousers, and prodigious round hats, like chimney pots,—the shirt-collars adapted to cut off the ears, and making a frame around such grotesque faces, with long noses and blue eyes, no beard or moustache, but a handful of curly hair on each cheek. The shape of the dress-coat puzzles them above everything. They try in vain to account for it, calling it a half-garment, because it is impossible to make it meet over the breast, and because there is nothing in front to correspond to the tails behind. They admire the judgment and exquisite taste of putting buttons as big as sapecks behind the back where they never have anything to button. How much handsomer they think themselves with their narrow, oblique, black eyes, high cheek bones, and little round noses, their shaven crowns and magnificent pig-tails hanging almost to their heels. Add to all these natural graces a conical hat, covered with red fringe, an ample tunic with large sleeves, and black satin boots, and a white sole of immense thickness, and it must be evident to all that a European cannot compare in appearance with a Chinese."

It would be easy to multiply extracts of a similar character.

M. Huc's work—which has been well translated—embraces an account of his journey across China, westward, from the land of the Sifans, high up on the borders of Thibet, almost as far east as Nankin, and thence to Macao.

His description is real and picturesque. It unfolds the life of China; it displays the character of the people, and evinces a thorough knowledge of Asiatic history and manners. The author writes from a peculiar point of view, and never forgets the glory of his Church; but, in most respects, he is a philosophical and an impartial narrator.

A System of Mineralogy, comprising the most Recent Discoveries, &c. By James D. Dana, A.M. 2 vols. Putnam & Co.

THE science of Mineralogy has for a long period been subjected to strange neglect in this country,—seeing that the British Islands contain more minerals than are found in any similar space over the entire earth, and that the industries which depend upon our mineral treasures are amongst the most important of those which have raised us to the first class of the wealth-producing nations.

Our miners know scarcely anything of mineralogy, and our metallurgists are entirely ignorant of it as a science. There is scarcely a school in which it is taught, and it is not without difficulty that mineralogy keeps a place at our universities. Mineralogy, indeed, has been deemed of such small importance at the British Museum, that the collections there were for a long time given over to the charge of a naturalist, whose acquaintance with *mammals* was as great as his knowledge of *minerals* was small. At length the authorities did think fit to secure a fraction of the time of a competent man, who, being indifferently paid, cannot be expected to be very earnest in his work. Of books on Mineralogy we have but few good ones:—the only complete one, however, being disfigured by a system of Crystallography, which, owing to its complexity, no one will be at the labour of understanding—the others being little more than compilations.

The causes leading to this neglect of a very important branch of natural science appear to be, on one hand, the ascendancy of the more attractive, because speculative, science of Geology, and the collateral science of Palæontology; and, on the other hand, the backwardness of the science of Mineralogy, as regards its nomenclature and its systematic arrangement. In Chemistry, since the days of Lavoisier, the name of a substance has indicated its composition; and in Natural History the nomenclature has gradually conformed to the same excellent plan. In Mineralogy—a science in which this method might be most readily introduced—we find, on the contrary, names given from the localities in which the minerals are found—Redruthite, Greenockite, Lanarkite, Lancasterite, &c.;—or from the individuals who discovered or examined the specimen—as Jamesonite, Phillipsite, Brookite, Ehrenbergite, and so forth. This leads to an immense amount of confusion; and so long as it is continued, Mineralogy will probably fail to make any progress as a branch of education.

The two volumes before us are the most complete that we have met with, and in the present state of mineralogy are almost satisfactory. The care which has been taken in determining the crystalline form and the chemical composition of every mineral, renders Mr. Dana's work exceedingly valuable. The localities in which minerals are found are indicated very fully, and the varieties are clearly described.

This is not the place to urge our objections to the system of classification adopted, which is far from a natural system. However, we cannot but press our desire to witness an arrangement in which salts of soda, barytes,

lead and copper should escape the complexity of being placed in the same group.

Mr. Dana says,—"A systematic nomenclature like that for botany and zoology is out of place in this science, except it be based upon the relations among the whole range of inorganic products." This is exactly what we contend for; and we had hoped that our Author was likely to have thrown off the cobwebbed robe of the old mineralogists, and, by boldly introducing a really natural system, have given vitality to his science. We wish Mr. Dana had carried out his own ideas, as conveyed in the following passage—so far as to have excluded all names of persons or places:—"It should be remembered that the use of names of persons eminent in other sciences, or of such as are ignorant of all science, is wholly at variance with good usage and propriety; moreover, an attempted flattery of the politically distinguished is degrading to science, and cannot be too strongly discountenanced."

YEAR-BOOKS.

Calendars, year-books and almanacs continue to pour in. Foremost in bulk, if not in importance,—this latter being a very variable quality, changing with the taste and the pursuit of each particular purchaser,—is Mr. Thom's *Irish Almanac and Official Directory* (Thom & Sons, Dublin), a compilation that embraces such a multitude of details, local and imperial, we scarcely know how the greedy tabulist could wish for more. The volume is a marvel of skill, selection and care in compression.—What Mr. Thom's *Irish Almanac* is for Ireland, Messrs. Oliver & Boyd's *New Edinburgh Almanac* aspires to be for Scotland. Less in bulk and in price, it is scarcely, if at all, inferior to its Dublin rival in the care with which its matter is selected and composed. It very wisely devotes a section to imperial matters, so as to become a general as well as a local year-book.—*The Churchman's Year Book for 1855* (Cox) is a valuable record of proceedings and repository of facts interesting to the ministers and members of the Church of England during the past year, in all parts of the world. It is a very useful book for reference.—Mr. Gardner's *Royal Blue Book and Fashionable Directory* (B. W. Gardner) reappears for the new year in its well-known form, but evidently stouter with age and tending towards a most unwieldy corpulency.—*The Post Magazine, Almanac and Insurance Directory* (Pateman) devotes itself to a special object—insurance,—which it illustrates and almost exhausts. From one of its lists we learn that no less than seventy-one projects of new insurance companies have been registered during the past year—a fact which proves that war has not materially checked the spirit of speculation in this country. Some of the names, too, are suggestive of various changes. One company bears the honoured name of "Alma,"—another is called, we suppose in compliment to Napoleon the Third, the "Emperor,"—a third bears the name of "Nelson." Among others which attract attention is the "Commonwealth," the "Conservative," the "Operative," the "Parental" and the "People." One has the attractive title of the "Magnet," another the dubious one of "Stork."—*The Art-Union of London Almanac*,—*Ashbie and Dangerfield's Pocket Almanac for 1855*,—*The Gardener's and Naturalist's Almanac*,—*The Scottish Temperance League Register and Abstinence's Almanac*, are all devoted to the elucidation of the special topics stated or suggested in their title-pages.—*The War Almanac* (Clarke),—and the *Anglo-French Alliance Almanac and Monitor* (Ward) seek to borrow an interest from transitory events. The first contains a mass of matter, tabular and other, on the war; the second is rather miscellaneous in contents and mystical in meaning.—Mr. Parker reproduces his very useful *Educational Register and Family Almanac*, with its account of the Universities, Colleges, Institutions, Foundation and Grammar Schools, together with information and statistics relating to the progress of education generally.—*Parker's Church Calendar and General*

Almanac aspires to be useful in the Church and the University,—and fulfils its aim.—What Mr. Parker does for the Church, Messrs. Jackson & Walford do for Dissent in their *Congregational Year-Book*.—*The London and Provincial Medical Directory* is one of the useful books devoted to special professions.—*The Political Annual and Reformer's Year-Book* (Freeman) is a very excellent shilling's worth, full of useful information and suggestions to make one pause. Every man who assumes the name of Reformer should have the facts contained in this little volume by heart.

OUR LIBRARY TABLE.

The Step-Son: a Domestic Romance of the Present Day. By F. N. Dyer, Esq. 2 vols. (Bentley).—The name of this author is new in fiction. The work evinces considerable care and painstaking, but the result is heavy. The main features of the story are so much overlaid with fine words and elaborate details, that only a confused impression is left upon the reader's mind. The incidents arise from the author's own will and intention, instead of being evolved naturally from the progress of the story. The characters are not human beings, but puppets laboriously moved by machinery, which no care is taken to disguise. The great fault lies, however, in the construction, whilst minute details are elaborated in descriptions and conversations; the main facts and most vital points in the story are slurred over in a few hasty lines, which makes it difficult for the reader to carry on the thread of the plot. The story turns upon the fatal influence of Romish priests upon the peace of families—where they are admitted. An Exeter Hall point of view is taken of their dark, designing, subtle, unscrupulous, and—in one word—diabolical mode of proceeding. Mr. Bernardi is an Italian priest, who has been the friend and spiritual director of Mr. Bodmal all his life, and has always (until this story began) appeared an excellent, loyal and devoted friend. Mr. Bodmal, a Catholic gentleman of large fortune, has, however, married a Protestant lady for his second wife; and Mr. Bernardi fearing her influence will pervert her husband from the Catholic faith, and Mr. Bodmal not being so zealous as might be desired in the Catholic aggressive movement, and his daughter having formed a great friendship with the Protestant aunt of her mother-in-law, consequently liable to be turned aside from the Catholic faith;—for all these reasons Mr. Bernardi begins to work a plot in which the peace and comfort of the whole family are to be ruthlessly sacrificed. Mr. Bodmal is to be made jealous of his innocent wife,—his daughter is to be separated from the young man to whom she is engaged, and forced into a convent,—whilst Ferdinand, the eldest son, is encouraged, by Mr. Bernardi, in every species of vice and debauchery in order that it may become his interest to lend his aid in furtherance of this pleasant plan. An attachment is asseverated by the author between Ferdinand and Giovania, the niece of the priest, who had been received into Mr. Bodmal's house and treated as his daughter; but this is only asserted, and the attachment, if any, is not made palpable to the reader,—consequently it takes no effect. Mr. Bernardi is made to utter a few speeches about the "cause of the Church," and the conversion of the country to Catholicism; but he pursues his schemes with a remorseless perseverance which none but stage villains are endowed with. He goes on like a piece of clockwork after it has been wound up, which, it is scarcely needful to say, the most hardened villains in flesh and blood find impossible. In furtherance of his plans, he contrives to land his friend Mr. Bodmal in a lunatic asylum, and to imprison the daughter in a convent. How matters were finally to be unravelled and set right seems beyond mortal power, when the priest and his precious niece, who has aided him in all his villainy, are carried away in a great flood in the course of their afternoon walk, and, even whilst struggling in the waves, the priest fills up the measure of his iniquities by stabbing his niece in order to disengage himself from her clutches! After this, of course everything falls back into its right place,

and everybody is made happy. Readers, whose strong Protestant feelings enjoy tales of priestly atrocities, may find ample gratification in the pages of 'The Step-Son'; but those who prefer human nature and human probability must go elsewhere.

The Manners of To-day—[*Les Mœurs d'Aujourd'hui*]. By Auguste Luchet. (Paris, Coulon-Pineau).—The success of 'Le Cordonnier de Crécy' at the *Théâtre Beaumarchais* has drawn attention to other works by M. Luchet. The published analysis of his drama led us to expect forcible, if not fine, pictures of popular life in Paris. These, however, we do not find in his 'Manners of To-day.' Though some of his subjects, such as 'Le Canot,' 'La Blague,' 'Le Chantage,' are too exclusively Parisian for their titles to find any perfect equivalent in the dictionaries of English jargon or of London slang, there seems to us a want of Parisian sharpness, directness, and impudence in their treatment. M. Luchet tries for sarcasm, epigram, depth,—but he strikes east or west of the nail, not on its head. He may possibly be too serious a thinker to be able to hit off folly as it flies, and yet not be a dull observer. Seeing how rich our tables are in handiworks of this class, time is wasted in training a talent to do that which is ungenial to it. There are evidences of sincerity and purpose in this book—an apparent desire to recommend honest practices and good morals, which warrant the fancy that M. Luchet, if a young writer, may do service to the cause of French literature and manners; but we do not think it will be in the field which the sharpshooters with their '*Physiologies*' and other such ephemeral works have somewhat exhausted.

Tit for Tat; or, American Fixings of English Humanity. By a Lady from New Orleans (U.S.). (Clarke, Beeton & Co.).—Charming to the sympathies of all belonging to Billingsgate that was is the street-rejoinder "You're another." Billingsgate that is, we believe, rises superior to this old argument. Sole and skate settle their quarrels more logically and less pungently than they did. Here is an anonymous "Julia," however, who remains true to the time-honoured institutes of the fish-market, and who, abetted by an anonymous authority signing himself (?) "Stars and Stripes," launches a retaliatory soot-bag against her Grace the Duchess of Sutherland and the other English ladies who are held to have insulted those "Proprietors of the Southern States," who bargain for black men, beat black women, and breed black children, in order to fill their pockets. "You are blacker in England!" screams this anonymous Julia. "Look up your own chimneys!"—"Tit" is the climbing boy to "Tat" the slave.—The execution of this deplorable book is in harmony with its conception. Our readers know that the *Athenæum* has, on principle, protested against the misuse of Fiction as applied to social abuses. Books like 'Tit for Tat' are among the dismal facts on which our protest has been based.

Later Years. By the Author of 'The Old House by the River.' (Low & Co.).—Whatever life and nature might have been possible is choked out of these sketches and reminiscences by a dreary sentimentality—an affectation of melancholy which makes them anything but pleasant reading. They purpose to be records of personal history and adventure in various parts of America; but whether in forest, field, or city, the same misty eloquence and washed-out Byronism prevails to the destruction of all that is graphic or significant in the sketches of life or scenery. The author is always intent upon producing himself in some interesting mood, and the result is wearisome exceedingly. In addition to this, the book is printed in a small, blinding, indistinct type, which is far from making it enticing to the eye. It is one of those American reprints which the English public could well have afforded to forego.

A Dozen Pair of Wedding Gloves. Illustrated by Phiz. (Blackwood).—This is lively, amusing railway reading, but will scarcely stand close criticism. The dialogues are too stagey and artificial for utterance, except before the footlights—and the stories themselves resemble farces rather than sketches from real life. The fun is

too heavy and prepossessing when divested of the dress and decoration of the theatre. *The illustrations are clever and spirited.

My Brother ; or, the Man of Many Friends. By an Old Author. (Low & Co.)—This is a temperance, or rather "teetotal," story, of a better class than usual; it is as interesting and as little special as it is possible to make a story where the predestination of the hero to grief and shame and an untimely end is clearly visible from the commencement. This class of stories is always so dreary, so inexpressibly painful to follow, that they are enough to drive the reader into literary dissipation, as a protest and reaction against all the prophecies of evil they contain:—at least, we must confess that such is their moral effect upon ourselves. If we might counsel the writers of temperance stories, we should advise stirring appeals to the higher instincts of human nature—descriptions of the successful struggles with the temptation to social excess, and the gradual strengthening of healthful habits of self-control. It would be far more effective than the constantly recurring dreary scenes of inevitable falls from one stage of degradation to another. There is in human nature a certain nobleness which revolts against a threat, no matter how that threat may be disguised. No temperance story can paint the abyss of degradation that lies before a drunkard more vividly than the drunkard does for himself in the moments of returning sobriety. What he most requires at such times is to be stimulated to a better course by some cheerful hope that he may succeed if he will make the endeavour; but the tenor of the temperance stories which have fallen in our way, is to preach the despairing dogma of once a drunkard always a drunkard;—which is slight encouragement to those on whose behalf they are written, besides being a prophecy that more than most others would be likely to work its own fulfilment.

Tour Round my Garden, translated from the French of Alphonse Karr by the Rev. G. Wood (Routledge & Co.), is prefaced by an assertion, that the works of their writer "are little known in this country." We should amend the assertion, and add—by those who know little of modern French literature. This 'Tour round my Garden,' for instance, was, a couple of seasons ago, or thereabouts, to be seen on many a table, in its original form, as one of the expensively-illustrated French gift-books. As such, too, it was honourably and prominently noticed in the *Athenæum* [vide No. 1214]. A writer who deals in sweeping assertions always runs the risk of sweeping down his own character as an authority. There can be no reason why so graceful a book as M. Karr's 'Tour' should not be translated; there may be none why it should not be illustrated anew, as it has here been done by Mr. Harvey; but in laying down the want of English knowledge on the subject, Mr. Wood has brought the limits of his own in question. The translation, we will add, seems gracefully and faithfully executed.

The Codex Montfortianus: a Collation of that celebrated MS. with the Greek Text of Wetstein, and with certain MSS. in the University of Oxford. By O. T. Dobbin. (Bagster.)—The first reflection suggested by this work will be, that the choice of Wetstein's text with which to collate the Montfort Codex was arbitrary and ill considered. The authority of a MS., as Dr. Dobbin rightly observes, can only be fairly tested by comparison with other MSS.; since all printed texts of the New Testament are made up of selected readings. Several codices,—the Alexandrian, the Cambridge, and those of Tischendorf,—have been published in fac-simile; and, in the absence of these, no better standard could have been fixed upon than the Textus Receptus, which, if not the best version possible, is the best that has yet been made of the Greek Testament. Wetstein's text, though in its general strain it corresponds with the Elzevir of 1624, is suspected of numerous eccentricities; and there are about 6,000 differences between it and the MS. to which Dr. Montfort gave a name. But when Dr. Dobbin states his reasons for preferring to collate the MS. with the text of Wetstein, we allow them to be

sufficient; though, if it be not too much to ask from a critic who has accomplished a task so heavy, and tunnelled through whole mountains of collation, we would invite him to complete his patient labours, and present us with a comparison between the Elzevir and the Dublin copy. He did not originally adopt this course because Dr. Barret, in a quarto volume of singular erudition and integrity, had already examined, annotated, and collated the Epistles of the 'Codex Montfortianus,' and had unfortunately chosen Wetstein as his standard of comparison. To render his criticism a development in full of Dr. Barret's undertaking, Dr. Dobbin also fixed on this faulty version; and we will bear witness to the ample learning and honest industry with which he has carried out his plan. More than 4,000 citations from MSS. are here printed for the first time; and they are arranged with a method so orderly and clear, that the student may perceive, without doubt or trouble, the exact relation which the passages quoted bear to each other. For, it should be mentioned, the MS. Gospels in Lincoln and New Colleges, Oxford, have also been compared closely and minutely with that of Dublin, and some important results are arrived at. For these, and for the other curious matter contained in Dr. Dobbin's introductory discourses, we must refer, however, to the volume itself, which is deserving of warm praise. Should there be students emulous of rivaling his achievement, he tells them that at Oxford there are accumulations of unused MSS., probably larger than those of Paris, Vienna, and Rome. But he warns all competitors that they can gain little either in profit or reputation. This is not very encouraging:—we hope it is not true.

Mr. Sotheby has addressed *A Few Words, by way of Letter, to the Directors of the Crystal Palace Company*. He laments an excess of expenditure,—short-coming of receipts, and some deficiencies of management. His suggestions point chiefly to minor details, and his criticisms to the use of colour on the Assyrian restorations,—to the style and hues of the Egyptian models,—to the tinted marbles of Greece,—to the chilliness of the Pompeian Court,—to the arrangement of the statuary, and to the nude sculpture.—This last topic is also descanted on in *The Crystal Palace: an Essay, Descriptive and Critical*, which is a piece of inflation and astounding silliness.—On the question of opening the Sydenham Building on Sundays, we have *The Crystal Palace: a Dialogue*, in which Lady Fanny Seymour and Miss Caroline Howard settle the point—to their own satisfaction, at least.—To whose satisfaction, however, does Dr. Khan suppose he has set forth his account of the *Niams-Niams of Central Africa*? Some anatomical elucidations are added, by Dr. Sexton, with a repulsive illustration. Lord Monboddo's doctrine, that all men originally had tails, though some have worn them out, may come into vogue again; but we wait for a real specimen of the Ghilanes, with their caudal appendages. However, the believers in Tom Thumb, after discarding the Aztecs, may bestow their gold watches and caresses on Niams-Niams—not in Dr. Kahn's Museum, but in the Egyptian Hall, if ever they are brought thither alive.—Meanwhile, we have timely discussions which the credulous might consult with advantage. To persons who are easy of such persuasions, we may introduce Mr. Watkin Williams's *Essay upon the Philosophy of Evidence, or an Inquiry into the Progress of Belief*. They may then be ready for Dr. J. Bedford's *New Theories on the Universe*: explaining how *Sun, Moon and Stars are formed*. These new theories were submitted by their author to several natural philosophers, who, however, declined to meddle with them. They display, nevertheless, a process of careful thought.—On social and educational topics, we find on our table Part V. of Mr. Robert Owen's *New Existence of Man upon the Earth*.—*The Bible in the Schoolroom, a Letter to a London Schoolmaster*, by Launcelot Layman, which exhibits nothing but flippancy and pretence.—Mr. W. Knighton's *Training in Streets and Schools, The Educational Prospects of St. Thomas, Charterhouse, a seasonable letter to Lord John Russell*, by the Rev. W. Rogers,—*The Relative Importance of*

Subjects taught in Elementary Schools: a Lecture, by J. G. Fitch,—*The Catholic University and the Irish Language*, by J. O'Beirne Crowe,—*The Third Annual Report of the Worcester Government School of Design*, which sets forth some encouraging facts,—*Maclaurin's System of Writing*, an advertisement in a pamphlet shape,—*True Stories from Ancient History*, a neat and simple little manual for infant schools,—and a *Tabular View of the Classification of Animals and Vegetables, after Cuvier and Decandolle*, for educational purposes.—The Council of the Art-Union of London have issued their *Report for 1854*.

LIST OF NEW BOOKS.

Allott's (Dr. R.) *Psychology and Theology*, cr. 8vo. 7s. 6d. cl.
Aspen Court, by Shirley Brooks, 3 vols. post 8vo. 31s. 6d. cl.
Augustus (Rev. G.), *Work of Christ in the World*, cr. 8vo. 2s. 6d. cl.
Baileys's *Annals of Nottinghamshire*, Vol. 3, royal 8vo. 10s. 6d.
Barber's (H. A.) *Sorrow of the Heart*, 18mo. 2s. cl.
Bayne's (Peter) *Christian Life*, cr. 8vo. 7s. 6d. cl.
Bee and the Sloth, 18mo. 2s. cl.
Bickersteth's (Rev. E.) *Cottage's Guide*, 5th edit. 18mo. 2s. 6d. cl.
Burn's *Naval and Military Technical Dictionary*, 3rd edit. 15s. cl.
Cleave's *Manual of Elementary Chemistry*, illust. cr. 8vo. 7s. 6d. cl.
Cleave's (Rev. H.) *Parish Sermons*, First Series, 2nd edit. 6s. cl.
Goodwin's (Rev. H.) *Guide to the Parish Church*, 18mo. 3s. 6d. cl.
Goole's (Rev. J.) *Analysis of Pearson on the Creed*, 2nd edit. 4s. cl.
Gregory's (W.) *Elementary Treatise on Chemistry*, 12mo. 5s. cl.
Griffith's (Major) *Artillerist's Manual*, 6th edit. 12mo. 7s. 6d. cl.
Hibbard's (S.) *Hamlets and Day Letters*, cr. 8vo. 3s. cl.
Illustrated London News, Vol. 25, folio. 12s. cl.
Kaleidoscope; or, *Worldly Conformity*, by Elliott, fc. 3s. 6d. cl.
King's Campaigning in Kaffirland, 2nd edit. cr. 8vo. 14s. cl.
Liddell and Scott's *Greek Lexicon*, new edit. 4to. 32s. cl.
Lingard's *Abridgment of History of England*, 12mo. 5s. half-bd.
Leaves from a Family Journal, fc. 5s. cl.
Macfarlane (Dr.), *The Disciple whom Jesus loved*, cr. 8vo. 6s. 6d. cl.
Massey's (Gerald) *War Waits*, fc. 1s. 5d.
Montgomery's (J.) *Poetical Works*, 4 vols. Vol. 1, fc. 3s. 6d. cl.
Montgomery's *Life & Writings*, by Holland & Everett, V. 1 & 2, 21s.
Moody's (Rev. H. R.) *Hints to Young Clergymen*, 6th edit. 2s. 6d.
Murray's *British Classics*, Gibbon's *Rome*, Vol. 8, 8vo. 7s. 6d. cl.
Newland's (Rev. H.) *Forest Scenes in Norway*, 2nd edit. 12mo. 5s.
Newton's (Dr. R.) *Life, Labours, and Travels*, 12mo. 2s. cl.
O'Byrne's *Naval Annual for 1855*, cr. 8vo. 2s. cl.
Old Tales for the Young, illust. 12mo. 3s. 6d. cl.
Parish & other Penchances, by Author of 'Kirkman's Letters,' 6s. cl.
Paul and Virginia, new edit. illust. fc. 2s. 6d. cl.
Proctor's (Rev. F.) *History of Book of Common Prayer*, 10s. 6d. cl.
Riches of Poverty, by Mrs. Eccles, fc. 8vo. 5s. cl.
Ricco's (Mulle) *Comforts for the Crimea*, sq. 1s. 5d.
Riving Englishman in Turkey, fc. 2s. 6d.
Ruth Hall, by Fanny Fern, fc. 1s. 6d. bds.
Science and Mechanism, edit. by C. R. Goodrich, illust. 4to. 25s.

[ADVERTISEMENT.]—NEW CATTLE MARKET.—The AGRICULTURAL GAZETTE and GARDENERS' CHRONICLE of THIS DAY, January 20, will contain a full description of the New Cattle Market; together with an Engraving, exhibiting, in perspective, the general arrangements of the parts. It may be ordered of all News-agents, or a single copy will be sent by post on receipt of six postage stamps.—Office for Advertisements, 5, Upper Wellington Street, Covent Garden.

AT SCUTARI.

LIGHT faileth never: not when bright-stored Day Moves from her altar and Earth's lapsing hymn Ebbs like a tide from aisle and pillar dim, As through the western porch he takes his way.— Who deems that Light has perished?—Pause; and, lo!

From the far dome the starry cressets shine, And fires, unseen before, reveal the shrine! LOVE faileth never: in the night of woe And wrong, soft splendours kindle; but what beam More pure than hers whose rays of pity stream Through War's burst gates, who heard the soldier's sigh

Across the seas—and came? Her ministry Shows Heaven's rule paramount, and Wrath and Ill From their barred hold—see Good ascend still.

Throned in Man's nature and most potent law Of all that prompt or check his human breath, Mightier than Hate, Ambition, Fear, or Death— Is Love that thrills to Love. The wounded saw The Soother of their pain—then turned and wept. Yes, eyes which, when a field of sabres leapt, Shone clear as stars through lightning—at thy look Poured the heart's stifled rain; and bosoms shook— Mild Watcher, at thy voice—which in the gyres Of wheeling War beat calm as by the fires Of English homes; and they who undimmed Drove Russia's seven-fold force from steep and glade, And saw a stiffening army, line on line, Stretched at their feet—now, vanquished, sink at thine!

W. M.

THE PERVERSE WIDOW.

IN June last, we found in Mr. Kerslake's Catalogue an account of a volume which, as stated, contained the autographs not only of Sir Roger de Coverley's 'Perverse Widow'—Mrs. Bovey—but of her "malicious confidant"—Mary Pope—with a characteristic verse, and still more characteristic comment; and we transferred the notice to our pages, in the belief that it would interest our readers, with the simple observation—"the above is very apt and illustrative. Is it authentic? If so, it is unquestionably curious."

The perverse widow herself could not, we imagine, have raised an objection to this modest questioning; but Mr. Kerslake discovered that he was thereby called on to remove all doubt "of the genuineness of a commodity" which he had "offered for sale at a price that would have been exorbitant, if it had been spurious or was doubtful." Surely this is an exaggeration which approaches the ridiculous. The price asked for the volume, according to our recollection, was fourteen or fifteen shillings, so that the "exorbitant" would be determined by the amount, more or less, of change returned for a sovereign. If Mr. Kerslake's character be not a protection against such a suspicion—the suspicion of being a knowing and consenting party to a deception for such a miserable "exorbitant"—it is obviously not worth seven shillings. But we cannot allow Mr. Kerslake to do himself such injustice:—we know him to be a respectable man, and have throughout treated him as such. We guarded against even the possible misconstruction of those who did not know him; for when he wrote and offered to submit the volume to our "scrutiny," we not only printed his letter, but added the following comment:—

"We never, for a moment, questioned the good faith of Mr. Kerslake, or doubted that he found the notes in the volume; but the quotations were so singularly 'characteristic' that we questioned their authenticity. Mr. Kerslake must remember that the story about Mrs. Bovey is, after all, but the echo of a tradition, and that there are circumstances which tend to shake faith in it—whereas Mr. Kerslake's volume is, professedly, evidence, under the widow's own hand, so singularly 'characteristic' that it would prove, if it prove anything, not only that she was the widow, but desired to be remembered as 'the perverse widow,' and had called in Mistress Pope to vouch for it."

Though we did not accept Mr. Kerslake's offer to place "the whole matter under" our "judgment," he was pleased to forward the volume, accompanied by a letter of explanation. That letter we published with the following comment:—

"Here are the notes certainly—with the erasures—as described in Mr. Kerslake's Catalogue. We never doubted that they were in the volume. What we doubted at first we doubt still, the authenticity of the writing as that of the Perverse Widow. The first signature, 'Catharina Boevey,' has been tampered with, more or less,—some of the letters being altered, others added. Such, at least, is our opinion. Should any of our readers wish to see the volume for themselves, they will find it at our office for a few days, after which it must, of course, be returned to Mr. Kerslake."

Mr. Kerslake replied, and again we published his letter.

We submit for consideration, whether it was possible to carry on a discussion with better temper—a more obvious wish to do justice to Mr. Kerslake—or, when positively forced to offer an opinion, whether we could do so and avow a difference, with more respect or less dogmatism. It was fair to assume, after a silence of more than six months, that Mr. Kerslake thought so, too; but it would now appear, if we are to put faith in appearances, that Mr. Kerslake has been all these weary months "nursing his wrath to keep it warm,"—and certainly, to judge by results, he has been very successful, and kept it very warm.

Mr. Kerslake, it appears, stimulated by some cause or other, set himself to inquire into the facts and probabilities with a zeal that does him credit, and the result is a biographical notice of the Widow and her "confidant" of considerable interest,—whether conclusive or satisfactory as to the original question, we have doubt, which the reader may solve when we have submitted the facts.

Mr. Kerslake notes significantly that our objection—our suspicion that the name had been tampered with—applied to only one of the four signatures. Quite true. In our opinion, if any one had resolved to play off a joke on the cre-

dulous—and, like jokes, far more elaborate, and in print, as well as in manuscript, have been but too common—the probabilities are, that some inscription, found in the volume itself, suggested it; and having altered the original to Catharina Boevey, he wrote "Catharina Boevey" in other places, in the same page, and on the title-page; so that attention might not be fixed on the one signature which had been tampered with. The mere fact that the book is disfigured with these signatures is in itself a ground of suspicion. Amongst the humbler classes, it is not unusual to find a book with the name of the owner scrawled over it from title-page to colophon; but with such persons "a book's a book"—a sort of property—and writing a grace and an accomplishment of which they are proud. But this was not the position of the Bovey family; and the lady, we are told by Steele, was remarkable for "the most shining accomplishments." If, however, all that is assumed by Mr. Kerslake be allowed, it will not make up the whole interest,—for the "confidant," Mrs. Pope, must have indulged in like scribbling propensities. Her signature was wanting to complete the story, and there we find it.

Let us hear what Mr. Kerslake has to say of this signature.—

"In the first of the four inscriptions [the only one with which we concerned ourselves, for reasons already given] of the name of 'Catharina' [the only word we questioned], *the pen of the writer had been dry in the middle of the word, and was redipped into the ink, the consequence of which is that the letters 'tha' appear to have been written with an effort, which has produced a slightly confused appearance, whilst the letters which follow them, 'rina,' have a fuller and darker stroke.*"

What more could be required to justify the doubt of the *Athenæum*? Whether the "slightly confused appearance" of some letters, with the "fuller and darker stroke" of others, in the single word "Catharina," is well explained or even best explained by Mr. Kerslake, is a question in which we are in no way concerned. We desire only to show that, having been called on by Mr. Kerslake to give an opinion, that opinion, right or wrong, may be justified or excused by the evidence before us.

Mr. Kerslake's researches, however, have brought to light other facts, which he seems to suppose we shall rejoice over because they may be thought to strengthen or confirm our doubt. Mr. Kerslake is mistaken. We would rather see the authenticity of the signatures and the inscriptions established, for the latter tend, as we said, curiously and strangely to confirm Sir Roger's opinion of the lady, and would therefore become a fact of some literary interest. It appears, however, that the inscription—the

"Catharina Boevey February the 10 1688"—

was found by a comparison with the signature of his will to be "in the handwriting of her husband, William Boevey, Esq."! If Mr. Kerslake had as much experience as we have, as to the opposite conclusions to which well-informed persons frequently arrive in respect to handwriting, he would, we think, have spoken less confidently on this point. It is enough, however, for us, who are only recording Mr. Kerslake's facts, to note here, that the signature we questioned, the autograph of the "perverse widow," is now declared not to be her autograph at all. Other and still more startling facts follow. Though the husband is said to have spelt his name "Boevey"—though the name of the "perverse widow" is spelt Boevey four times in Mr. Kerslake's "commodity,"—it appears that not only did Steele dedicate to Mrs. Bovey, but every other correspondent so far as known addressed her as Bovey—that she herself, without one single example to the contrary, always signed her name Bovey. There are three volumes still at Flaxley Abbey, in possession of the family, with her autograph, and in all these her name is spelt Bovey,—and an autograph letter to her bailiff she signs "Cath: Bovey."

We are indebted for most of these facts to Mr. Kerslake,—he has fairly stated them as the result of his inquiries. Mr. Kerslake, of course, en-

deavours to reason away their force: we leave them without comment to the judgment of the reader.

It also appears that, in addition to our offences in the Bovey controversy, we have offended Mr. Kerslake in the Pope controversy; and *hints* at many strange things. These we reserve for a more becoming occasion. Meanwhile, let us avow our belief that Mr. Kerslake is not naturally so weak or so "perverse" a man as he appears. Some poisonous distilment must have been poured into his ear, or into his inkstand.

OUR WEEKLY GOSSIP.

THE story of a book has made the scandal of the week:—a story in which the extremes of society have come together, high names have been freely used, and the relations of the Press to the government have been again brought under discussion. Last Sunday, the *Examiner* surprised its readers by the production (from a work called 'My Courtship and its Consequences') of a letter bearing the signature of Mr. H. U. Addington, dated from the Foreign Office, and addressed to the author, a man who is—or lately was—a convicted felon, serving his "term" in a foreign house of correction,—which letter implied that this convicted felon had been employed and paid by the English Government "to make known clearly, through the medium of the French and United States press, the liberal, and especially the pacific, character of the policy of Her Majesty's Government." Against this indirect attempt to influence public opinion—instead of the more open and manly course of first recognizing the moral power of the organs of opinion, and then seeking to establish a legitimate relation with them,—our contemporary protests strongly, and we join in his protest.—On Monday the *Standard* undertook to enlighten its public still further. It produced the name of the criminal, as one "Nichoff,"—but added little more to the story. On Tuesday the *Times* let off its guns:—"Nichoff" figuring as the hero of a dismal farce, eloquently concluded by a flourish on the immaculate character of the press and the indiscretion of governments in using such miserable agents as "Nichoff." The *Times* did not pretend to have seen the book; and the tale of the *Standard* is very incorrect, and has evidently misled the *Times*. Our morning contemporary distrusted, while it repeated, the "Nichoff" story, and suggested that the Author of 'My Courtship' might be no other than the great Mr. Barnum himself, bent on fresh confessions. We have not been able to obtain the book; we have only heard of one copy as being in the hands of any literary friend; and our impression is that *the work is suppressed*. Perhaps the writer has secured his object. At all events, Mr. Addington, though called upon by the *Times*, has not denied the authenticity of his letter. The name of the denounced person is Henry Wikoff, a European by birth, "a citizen of the world" by profession, and an American by registration. His name is familiar to the readers of New York journals. He was the manager—Barnum-wise—of the New World press for Fanny Elssler, and is understood to have been the writer of puffs and paragraphs for other persons. He made a book for Louis Napoleon, which our readers may remember. His great feat, however, was an attempt to force a marriage with an heiress travelling on the continent: in which he failed, and was sent to a Genoa house of correction. Such is the man who now claims a literary connexion with our Foreign Office.

There has very recently been found at the shop of a pork-butcher a considerable portion of a very fine copy of the first edition of Aristotle's works, printed by Aldus, at Venice, in 1497, and also fragments of other works of less rarity, but still of considerable value. As books of this description do not find their way to the shops of pork-butchers in ordinary course, it may be well to draw the attention of the possessors of such treasures to this uncommon circumstance.

Mr. Webster writes on the subject of the 'Barnett Treatises':—"As considerable anxiety exists as to the decision of the judges, I feel it right, on behalf of myself and the other Trustees of Mr.

Burnett, to announce that Prof. Powell has informed me that the judges have agreed upon their decision, which will be transmitted to the Trustees as soon as it is formally embodied in a report. It may, therefore, be looked for here in a day or two, when the Trustees will lay it before a special meeting of the electors, and in their presence open the sealed envelopes containing the names of the two successful competitors. The result will be immediately communicated to the public by the medium of your own and other periodicals."

The Court of Directors of the East India Company have appointed, as a temporary measure, the Right Hon. Sir James Stephen, K.C.B., LL.D., Professor of History and Political Economy at Haileybury College.

A gracious act may be sadly spoiled. Correspondence from Constantinople brings us report of two acts of the Sultan:—his Imperial Majesty has sent the order of Medjidie to General Canrobert and to Andrew Anderson. The first, as everybody records, is Commander-in-Chief of the French, the second is a private soldier in the English army. This order is highly prized; it sparkles on the breast of Omar Pasha, and adds brilliancy to Lord de Redcliffe and Lord Raglan. Anderson won the badge by noble deeds,—and may he wear it long! Our interest, however, in the matter lies at home, not in the Crimea. The Queen has been pleased to allow her soldier to receive this decoration:—and refuse to allow him to use the style which it confers. Medjidie is an order of chivalry,—and the holder of the badge is a knight. England, we infer, would be shaken from its propriety at the name of Sir Andrew Anderson:—therefore, the Queen, while she allows him to be a knight, will not allow him to be called one! Does not such an instance of false logic strongly argue the want of a real Order of Merit in this country? The act for which Andrew Anderson is decorated by the Sultan is an English act,—his bravery before the enemy, and the recovery of the dead body of his commanding officer. England, therefore, was bound to reward him:—but England has no Order of Knighthood into which such a man may enter. In France, he would have found his reward in the Legion of Honour. Shall we never have an Order of Victoria,—an order of the new chivalries, open to all merits?

Two facts claim a record from America. Mr. Theodore Parker has been arrested on a charge of "constructive treason," founded on an expression in one of his public speeches on the Slave Bill. The trial will involve some points of special interest.—Our second fact is, that Mr. "Vitriol" Mitchell,—whose 'Jail Journal' we recently reviewed—has failed as an editor in New York, and retires from literature disgusted with the moderate temper of the American people.

Mr. Carleton has written to the Dublin papers an explanation of his defiant lines lately quoted by us. It runs thus:—

I regret to find that the lines I sent to your paper have either been misunderstood or wilfully misinterpreted. I beg to state at once that they were not meant as an appeal to my country for public assistance. I don't stand in need of it. When I was involved in a life-long struggle with embarrassments and difficulties that it is almost distraction to think of, I made no appeal to my country. Let it not be supposed, then, that I do so now, or that I am anxious to court public sympathy. When I stood in need of public sympathy, I neither sought it nor found it. The neglect, however, which I experienced, and what I suffered, I will never either forget or forgive. The stamp of it will be erased from my heart by nothing but death itself. It is better that I should say so while I am able to say so—if it were only for the sake of others who, at a future day, may tread in my footsteps, and experience the same neglect. I regret, too, that the English press has misunderstood me—for I perceive that their observations upon my verses generally conclude with announcing the fact, that I am in possession of a pension of 200*l.* a year. I may thank God, the indefatigable exertions of a few friends, and the bounty of a British Government, that I am so; for if it were otherwise, this letter might probably be dated from a public establishment that I do not wish to mention at full length. The allusion to my country was made in the bitter recollection of those ceaseless and friendless struggles which I was forced to undergo for so many years before my pension was granted. During that long period I found myself without a country. I write this only because I don't wish to lie under a misconception; and as for the verses themselves, as I wrote them under a gush at once of sorrowful and bitter feeling, so I am of opinion that neither their spirit nor execution should be ungenerously criticized.—I am, &c.

W. CARLETON.

We have to regret the loss of Mr. William

Wing, Secretary of the Entomological Society, at the early age of twenty-seven. Mr. Wing was an artist and lithographer of those objects of natural history which engrossed his attention.—Another death of the week which claims a record at our hands, is that of the Rev. B. Parsons, author of 'The Mental and Moral Dignity of Woman,' 'England's Greatness,' and 'Education, the Birth-right of every Individual.'

Letters from Weimar announce the death of Dr. Eckermann, the well-known friend and amanuensis of Goethe. The filial attachment to his great master,—the deep and quick intelligence to which we owe his celebrated 'Conversations with Goethe,'—the active part he took in the editorship of Goethe's works,—the integrity of his character,—and the honesty of his literary endeavours, are certain to secure to him an honourable memory. Eckermann was born in 1792, at Winsen, near Hanover; but not before 1821—23, after a youth of struggles, was he enabled to pursue his studies at the University of Göttingen. In 1823 he entered Goethe's house; after the death of the poet in 1832 he lived alternately at Hanover and at Weimar. His last years, we are grieved to say, were saddened by bad health and social isolation.

A new Catalogue has been added to the shelves of the reading-room of the British Museum, of some 20,000 pamphlets belonging to the Royal Library, which were presented to the nation more than thirty years ago, and the existence of which was made known to the public on Tuesday last. A catalogue was made of them fifteen years ago, but chiefly for the use of the librarians. This catalogue has been revised and recopied, and is now accessible to the public. The collection contains, besides a great number published during the reigns of Charles I. and II., James II. and George I. and II., all the most important pamphlets written during the reign of George III. on trade, commerce, finance, administration, and politics generally. It embraces also an immense number of tracts, placards, statutes, &c., in Dutch and French, having reference to Spanish rule in the Netherlands. The old collection of King's Pamphlets, known to bibliographers as the "Thomason Collection," was made during the reign of Charles I. and the Commonwealth. After experiencing a variety of vicissitudes, it was purchased by George III., who presented it to the British Museum library. It is catalogued, in manuscript, in twelve small volumes folio. On the fly-leaf of the first volume is written, "Actions that may be presidents to posterity ought to have their records; and do merit a most careful preservation." The tracts are entered according to their sizes. All the titles are inserted in the printed 8vo. catalogue of the Museum library, but a distinct catalogue, alphabetically arranged, is much required for this most invaluable historical collection. Mr. Panizzi in his evidence before the Commissioners (Q. 9898), states that he himself proposed to the Trustees in 1836, and again in 1837, that such a separate catalogue should be drawn up and printed.

Mr. Pettigrew has addressed a letter to the members of the Archæological Association in reference to the disputes between himself and Mr. Hugo. It is a sharp, vindictive, *ex parte* statement, containing many charges,—some extremely paltry, some which answer themselves, and others which we doubt not are capable of being satisfactorily refuted. Mr. Pettigrew's feelings have been excited, and he has introduced into his letter many things which he thinks will annoy his late Associates. He complains that their treatment of him has been ungenerous, and he pays them off in their own coin. But the dispute is too unimportant to merit lengthened attention. It matters little to the public, whether Mr. Pettigrew or his opponents have the management of a body which is so powerful for good as the Archæological Association. Since it lost the members who gave it archæological strength and working talent, it has existed only to gratify personal vanity.

We have received from Mr. Hann a very angry note on the subject of our notice of his work on the Steam-Engine; and he favours us also with a long quotation from one of M. Boutigny's communications relative to the explosions of steam-boilers.

Having been for a considerable period familiar with everything which M. Boutigny has published, Mr. Hann might have spared himself this trouble. The tone and temper displayed by Mr. Hann prevent our giving his letter a place in the *Athenæum*. He quotes Boutigny; and his quotation entirely confirms the opinion we expressed. We repeat it. Steam, or water vapour, generated at the temperatures necessary for the spheroidal state, does not possess the elastic force of steam generated under ordinary conditions; but it acquires all the elasticity due to its light temperature when the vessel containing it is cooled—no matter how. This is not clearly expressed in Mr. Hann's book; and even his letter proves, as we stated, that he is unacquainted with the experiments of M. Donné, of Belgium, and Prof. Henry, of the United States, which have an important bearing on the explosions of steam-boilers.

Messrs. Hurst & Blackett have in the press new novels by Mrs. Gore, Mrs. Trollope, Miss Jewsbury, and the Author of 'Sam Slick.'

We hear from Paris that a proposal is entertained by the Minister for Public Instruction for adding a Museum of Ethnography to the department of "Charts and Geographical Collections." The idea is a good one; and we shall be glad to see it carried into effect in France, if it be only as an incentive to our own Museum. Our friends across the Channel assuredly surpass us in the ease with which they adopt, and the rapidity with which they carry out, interesting suggestions. When the French Ethnographical Museum has been some years in existence and has acquired a European fame, our solomonic authorities will perhaps open their eyes to the importance of imitating their more creative neighbours.

At the annual public meeting of the Academy of Sciences at Paris, held last week for the distribution of prizes, it was remarked that, with the exception of the two Secretaries and M. Langier, who wore their official costume, all the members of the Institute were in plain clothes; and the entire proceedings, which were wont to create great interest, were characterized by apathy on the part of the members and of the public. No Mathematical prize was awarded. That in the department of Astronomy was divided among the following six discoverers of small planets:—Messrs. Luther, Marth, Hind, Ferguson, Goldschmidt and Chacoonac; and the prize in Physiology was awarded to Prof. Müller, of Berlin, whose physiological labours have been lately crowned by the Royal Society awarding to him the Copley Medal.

Mr. Jolley's collections, sold on Tuesday last, contained some curious lots. The first lot which attracted much attention consisted of thirteen tracts on the famous rabbit case of Mary Tofts, the pretended "rabbit mother"; they were bound in rabbit-skin, and brought 3*l.* Painter's 'Palace of Pleasure,' Garrick's copy, with his autograph, brought 18*l.* Hakluyt's 'Navigation and Discoveries of the English Nation,' a copy containing the suppressed 'famous voyage of Sir Francis Drake into the South Seas in 1577,' brought 19*l.* Garrick's Celebrated Cup, made of the mulberry-tree planted by Shakespeare, sold for 32*l.*

An amusing—and absurd—anecdote of Mr. Macaulay is making a tour of the country papers. According to an unknown story-teller, Mr. Macaulay, being desirous of obtaining information respecting eighteenth-century poetry, as material for his new volumes, took his way from the Albany to Whitechapel, and bought a roll of London ballads of a singing boy. Happening to turn round, as he reached his home, he perceived the boy with a circle of young friends, keeping close at his heels. "Have I not given you your price, sir?" asks the historian.—"All right, guv'nor," was the response, "we're only waiting till you begin to sing." Of course the story is apocryphal.

A Correspondent, Mr. Bramah, of Birkenhead, advertising to the article on the Russian Free Press, in the *Athenæum* of the 6th of January, inquires how the Russian empire could be said to be discovered in 1553 by Richard Chancellor when, in the twelfth century, a Muscovite Princess, Anne, had been married to Henry the First of France? If our Correspondent will refer to the article, he

will find that the discovery of Chancellor is there spoken of as the first introduction of Russia to the "world beyond sea,"—an event of the same character, in fact, as what is called "the discovery of China" by the Portuguese in 1517. Of course, the existence of China was known long before, and the existence of Russia from the days of Herodotus, who knew much more of Russia than he did of the British Islands. The Spanish pamphlet of the days of Queen Mary was cited to show the notions of contemporaries on the subject, which could hardly be taken as correct when they spoke of the dreary coasts of the White Sea as "new Indies." The conquest of Russia by the Tartars in the thirteenth century had so removed the country from the cognizance of the rest of Europe, that the Spanish writer was led to speak of it as non-existent on the map of the world as well as in the "navigation charts."—We take the opportunity of adding that, in the same article, Boris Godunov, by an accidental omission, was described as "the sovereign" of Russia in 1593, instead of "the virtual sovereign." The revolution with regard to serfage is always considered as the work of Godunov; but he did not ascend the throne until 1598.

THE WINTER EXHIBITION OF CABINET PICTURES, SKETCHES, AND WATER-COLOUR DRAWINGS OF THE BRITISH SCHOOL, IS NOW OPEN, at the GALLERY, 121, Pall Mall, Daily, from 10 to 5, in the Evening from 7 to 10.—Admission, One Shilling. Catalogue, 6d.

PHOTOGRAPHIC SOCIETY.—THE SECOND ANNUAL EXHIBITION OF THIS SOCIETY IS NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5, in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA OF LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatory, Swiss Cottage, &c. The extraordinary PANORAMA OF LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

CYCLOPEDIA, Albany Street.—NOW OPEN, with a Colossal Moving Panorama of the City and Bay of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the great Eruption of '73, and present state of the Excavated City. Painted by Mr. J. McNEVIN, from Sketches taken by himself in 1852. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1s.; Children and Schools, half-price.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—THE CAVALRY CHARGE at BATAKLAVA (Painted by the Messrs. Danson) is now added to the DIORAMA illustrating EVENTS of the WAR. The Lecture by Mr. Stocqueler, including Description and Diagrams of Bastions, Gabions, Fascines, &c. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

MONT BLANC.—MR. ALBERT SMITH'S MONT BLANC IS NOW OPEN EVERY EVENING (except Saturday), at 8 o'clock. The Morning Representations take place every Tuesday, Thursday and Saturday, at 3 o'clock. Stalls can be taken at the Box-office every day, from 11 till 4.

EGYPTIAN HALL, PICCADILLY.

SIEGE OF SEVASTOPOL—GREAT GLOBE.—A LARGE MODEL of the country around SEVASTOPOL, including Inkermann, Bataklaiva, and the Tchernaya, with the positions of the English, French, and Turkish Armies, and the Siege Works, at the GREAT GLOBE, Leicester Square.

THE GREAT GLOBE.—THE PORTRAITS OF LORD RAGLAN, Marshal St. ARNAUD, OMAR PACHA, SCHAMYL, and the Costumes of the Armies of Europe, are at the GREAT GLOBE, Leicester Square.—Admission to the whole building, One Shilling. Open from 10 A.M. until 10 P.M. Children and Schools, Half-price.

Now exhibiting at 57, PALL MALL.—A MUSEUM OF MEXICAN ANTIQUITIES, illustrative of the Mythology, the Religious Rites, and the Sepulture of the Toltec and Aztec Nations, as shown in figures of their Idols, Pictorial Chincars, Cinerary and Libatory Vase, Sacrificial and Musical Instruments.—Admission, One Shilling.

LOVE'S NEW ENTERTAINMENTS.—Christmas Holidays.—Ventriloquism Extraordinary.—Upper Hall, Regent Gallery, 63, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday; Saturday, at 3.—MR. LOVE, universally accepted as the first dramatic ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called "THE LONDON SEASON," and other entertainments. Pianoforte, Miss Julia Warman.—Stalls, 3s.; Area, 2s.; Gallery, 1s.—Tickets at Mitchell's Royal Library, 33, Old Bond Street; Turner's Music Depot, 19, Foultry; and at the Rooms, between 12 and 3.

PATRON: H.R.H. PRINCE ALBERT. ROYAL POLYTECHNIC INSTITUTION.—Continued improvements, increased attractions, fresh decorations.—MONDAY EVENING, the 22nd inst., LECTURE TO THE INDUSTRIAL CLASSES ON ELECTRO-MAGNETIC INSTRUMENTS and their remarkable Applications, by the Rev. A. Bate Power, A.M., F.R.S. &c., Principal of the Norwich Diocesan Normal School.—THE LECTURES ON CHEMISTRY, NATURAL PHILOSOPHY, and MECHANICS, as usual; with the REMARKABLE SCIENTIFIC NOVELTY, LECTURED on by J. H. Poyser, Esq., of Professor W. Armstrong's Experiments on the TRANSMISSION OF SOUND, illustrated by TELEPHONIC CONCERT.—ENTIRELY NEW and SPLENDID OPTICAL DIORAMA, from the ARABIAN NIGHTS, of the VOYAGES of SINDBAD the SAILOR, with beautiful PHANTASMA-GORGIA EFFECTS.—VIEWS of the WAR.—PERKINS'S STEAM GUN, which now discharges 200 BALLS per MINUTE.

SCIENTIFIC

SOCIETIES.

GEOLOGICAL.—Jan. 3.—Mr. Hamilton, President, in the chair.—Dr. A. Halley was elected a

Fellow.—The following communications were read:—"On a Modern Submerged Forest at Fort Lawrence, Nova Scotia," illustrative of the conditions under which some of the coal-bearing strata in the neighbouring coast at the Joggins were formed in ancient times, by J. W. Dawson, Esq.—"On some additional New Small Reptilian Remains, from the Purbeck Strata of Durdleston Bay, and on the Fossil Remains of a large Cuttle-fish, from the Kimmeridge Clay," collected by Mr. W. R. Brodie, by Prof. Owen.—"On the Tertiary Formations of the North of Germany, with special reference to those of Hesse Cassel and its neighbourhood," by W. Hamilton, Esq., President.—The author commenced his remarks by correcting an error into which he had been led in his former communications, on the Mayence Basin, respecting the age of the tertiary sands of Magdeburg and Westeregeln. He had there stated, apparently on the authority of Dr. Sandberger, that these last-mentioned beds belonged to a much newer period than the "marine sands" of Weinheim in Mayence basin; whereas, not only has Dr. Sandberger described them as of the same age, but there is a probability of their being still older. The principal sections near Hesse Cassel show a marine formation of no very great thickness,—sometimes consisting of blue clay, and at others of yellow sand overlying extensive beds of brown coal. This, again, rests on blue clay, beneath which are sometimes found thin beds of sandstone with plant-impressions, interstratified with other beds of clay. The whole resting on Muschelkalk and Bunter-sandstein. The marine sands of Westeregeln, near Magdeburg, are also found above the brown coal, whereas in the Mayence basin the marine sands of Weinheim constitute the lowest member of the whole tertiary series there, and are themselves overlaid by clays and brown coal. The author then proceeded to consider the relative age of these deposits; and, after alluding to what he considers the erroneous opinion of Philippi, who regarded the Hesse Cassel beds as being of the same age as the Sub-Apennine formation, endeavoured to show the probability that, although the Westeregeln sands may be somewhat older, they all belong to one general period, equivalent, or nearly so, to the middle Limburg beds of Belgium, and they mark the time when a communication must have existed between the Northern Ocean of Germany and the Mayence basin, and between the latter and the great Southern or Alpine ocean, in which the flysch and earlier molasse were deposited. Mr. Hamilton also alluded to the extensive basaltic outbursts which occur so abundantly throughout the whole country between Frankfort and Hesse Cassel; and he offered an explanation of the phenomenon observed on several occasions, where the stratified beds of brown coal, clay, &c. are seen towards and partly underneath the basaltic masses which form the cappings of the plateaux. When the stratified beds had been raised by subterranean pressure into undulating masses on a large scale, previously to the basaltic outburst, the igneous matter found an escape through the fissures of *synclinal* rather than of the *anticlinal* portions, inasmuch as the fissures in the *synclinals* widen downwards, while those in the other portions were naturally wider in the upper beds. The author concluded by showing that the brown coal-beds in this part of Germany belonged to at least three, if not four, distinct periods.

ASIATIC.—Jan. 13.—Prof. Wilson in the chair.—The assistant secretary read part of a memoir, by Col. Rawlinson, "On the celebrated Mound of Birs-i-Nimrud, near Babylon." This paper has been sent by the Colonel to the British Museum, and was obligingly communicated by the authorities of that institution to the Society. It will be remembered that the Birs-i-Nimrud is an immense, shapeless mound, nearly 300 feet high, and, where it reaches the plain, from 200 to 400 feet in width,—apparently made up of crumbling rubbish, except the summit, which stands out like the fragment of a ruined tower. It has excited much attention on the part of Eastern tourists; and several sketches, taken from various points of view, have been published. The Colonel commences his memoir with

a graphic account of the discovery of the purport of this vast mound,—a discovery sought for on a predetermined plan, without which it is probable that his attempt, like the many which have preceded it, would have been fruitless. The plan followed in the research is described in the memoir with minute details. The experience gained in former excavations enabled him to lay down a positive rule to the gentleman who skillfully superintended the work in his absence. He was directed to sink a perpendicular shaft at a point marked, until something should be reached indicating a wall or terrace; and, on reaching such indication, to follow it up horizontally, right and left, until it ended in the angle which he inferred would be found leading off to the other side of the mound. After two months' excavation, the Colonel was summoned to the work by the information that such a wall had been found, and laid bare to the length of near 190 feet; and that it turned off in right angles at each end, to be apparently carried all round the mound, forming a square of about twenty-seven feet in height, surmounted by a platform. He immediately rode to the excavation, examined the spot, where he found the workmen quite discouraged and hopeless, having laboured long and found nothing. He was now, however, well aware of these facts, and at once pointed out the spot near the corner where the bricks should be removed. In half an hour a small hollow was found, from which he immediately directed the head workman to "bring out the commemorative cylinder,"—a command which, to the wonder and bewilderment of the people, was obeyed; and a cylinder, covered with inscriptions, was drawn out from its hiding-place of twenty-four centuries, as fresh as when deposited there by the hands, probably, of Nebuchadnezzar himself! The Colonel added in a note, that the fame of his magical power had flown to Baghdad, and that he was besieged with applications for the loan of his wonderful instrument to be used in the discovery of hidden treasures. At the other exposed corner of the terrace, or wall, another cylinder was found, a duplicate of the former; but the discovery was not made quite so readily, nor, naturally, did it excite so much interest.—The paper was too long to be read entirely; and the whole of the description of the building was reserved for another meeting. It will be sufficient to say now, that it was composed of a series of several square platforms, one over the other, diminishing in diameter as they rose from the ground, each dedicated to one of the planets, and coloured externally with the colours attributed to the seven planets in the works of the Sabæan astrologers, and traditionally handed down from the Chaldeans. The translation of the inscriptions on the cylinders was read. It begins with the name and usual titles of Nebuchadnezzar, and proceeded with a summary of the buildings of Babylon which the king had repaired or erected. It then says that the "Temple of the Planets of the Seven Spheres," which had been built by an early king, 504 years previously (about 1100 B.C.) having become ruinous, owing to a neglect of the drainage, which allowed the rain to penetrate, and the sun-dried bricks causing the outer covering to bulge out, and fall down, the God Merodack had put it into his heart to restore it; that he did not, however, rebuild the platform, which was unimpaired, but that all the rest was restored by his commands. The inscription ends with the usual expression of his aspirations for the eternal duration of his work, and the continuation of his family on the throne for ever.

SOCIETY OF ANTIQUARIES.—Jan. 11.—F. Ouvry, Esq., Treasurer, in the chair.—The Rev. Thomas Hugo exhibited various fragments of mediæval horse-furniture.—The Secretary exhibited a gold signet-ring with the arms of Gratwick, found in Sussex.—Mr. Griffith presented drawings of an idol in gold found at Gantivite.—The Secretary, by permission of the Rev. Pemberton Bartlett, exhibited several relics found in Anglo-Saxon tumuli in Kent.—Mr. Pycroft communicated a transcript of a letter from Sir William Brereton, giving an account of a battle between the Royalists and Parliamentarians before Nantwich.—Mr. Birch com-

municated notes on an Italian account of the unwrapping of an Egyptian Mummy, at Florence, by Prof. Migliorini.

ROYAL SOCIETY OF LITERATURE.—B. Austin, Esq., in the chair.—Mr. Watkiss Lloyd commenced reading a paper on 'On the Sculptured Frieze of the Parthenon,' in reply to certain opinions of Dr. Braun, of Rome. The paper will be concluded at the next meeting.

STATISTICAL.—Jan. 15.—Col. Sykes in the chair.—Lord Stanley, M.P., was elected a Fellow.—'On the Effect of the recent Orders in Council in relation to English, Russian, and Neutral Commerce,' by Dr. Waddilove. The author commenced by a brief survey of the practice of Great Britain, as distinguished from that of other nations, in hitherto refusing to exempt the property of her enemy from seizure when on board a neutral vessel; and it was remarked that, notwithstanding the confederacies of other nations formed against her, and known as the "armed neutralities" of 1780 and 1800, Great Britain still adhered to the maxim of international law, "That the flag of the neutral does not protect the property of the enemy." The disastrous effects of the Milan decrees and the retaliatory Orders in Council of the British Government of 1807 were then referred to, and their consequent abandonment; and it was observed that the strongest exercise of England's belligerent rights still remained in force up to the general peace of 1815; but that, by the recent Orders in Council, a different spirit was manifested, and, moreover, that France and England, in their late treaty of alliance, had each relinquished a cherished maxim of international law of their own, by declaring, the one, that "a free ship makes free goods," and the other, "that the enemy's ship no longer condemns neutral property." The author then gave the number of Russian vessels condemned as prizes by the Court of Admiralty up to the 1st of January, and also the number of neutral vessels boarded and captured by reason of the breach of the blockade of the Russian ports in the Baltic; and it was remarked, that the vessels of Russia seized belonged chiefly to small traders, and that the loss consequent on their capture would fall on an unimportant portion of the Russian population,—and, since that country was not a commercial country, our seizing her shipping or blockading her ports did her but little positive injury, and the less so as she exported her produce through the neutral territory of Prussia. By allowing neutral vessels to carry the enemy's property, a blockade became necessary, the difficulties and anomalies of which were alluded to. It involved us in disputes with governments with which we were at peace, and tended to inflict loss on the unoffending neutral rather than on the enemy. In illustration of this, it was instanced that of the 155 neutral vessels which had been boarded by the English cruisers blockading the Russian ports in the Baltic and the Gulfs of Finland and Bothnia between the months of May and the middle of September last, only seventeen had been detained for breach of the blockade, in respect of which proceedings were now pending in our Admiralty Prize Court, wherein the real contending parties were the Danish and English Governments. Returns were then cited to show that the imports of flax, hemp and tallow into this country were in the aggregate little affected by the war, whence it was clear that a vast quantity of those articles reached us through the agency of neutral powers, at an increased cost indeed; but it was maintained that the excess of cost fell on the consumer rather than on the producer, and thus the evils of the present war from that source recoiled on ourselves. The author pointed out the injury that would result to our trade if the importation of Russian raw material were prohibited altogether; and concluded with an allusion to the late Message of the President of the United States, which, in conjunction with the conduct of France and England, as exemplified in their mutual abandonment of their hitherto rigidly maintained belligerent rights, showed a marked tendency towards the liberal and more enlightened policy respecting private property, by evincing an inclination to

adopt the maxim, that property, not contraband of war, should be as sacred and inviolable on the ocean as it is on land.

INSTITUTION OF CIVIL ENGINEERS.—Jan. 16.—James Simpson, Esq., President, in the chair.—The paper read was 'A Sketch of the Canal of Mar-seilles, and a Description of the Aqueduct of Roque-favour,' by Mr. Rennie.

SOCIETY OF ARTS.—Jan. 17.—Mr. W. Fairbairn in the chair.—The paper read was 'On the Smoke Nuisance considered morally, historically, scientifically, and practically,' by Mr. G. W. Muir, of Glasgow.—In its moral aspect the author considered, first, how the matter stands between the offending manufacturer and the offended public; secondly, how the legislature should treat the question.

MEETINGS FOR THE ENSUING WEEK.

- MON. Entomological, 8.—Anniversary.
Geographical, 84.—Notes taken during a Journey in Persia, Second Series, by Mr. Abbott.—Proposed Expedition to the Somali Country, in Eastern Africa, by Lieut. Burton.
TUES. British Meteorological, 7.—General and Council.—'On the Means of determining the Amount of Evaporation from the Earth's Surface,' by Dr. Buist.—'On the Weather in connexion with the Growth of Barley,' by Mr. Dozgett.
Institution of Civil Engineers, 8.—'The Sea Embankments in Morecambe Bay, Ulverstone and Lancashire Railway,' by Mr. Brunles.
Zoological, 9.—Scientific.
Royal Institution, 3.—'On Magnetism,' by Prof. Tyndall.
WED. Royal Society of Literature, 45.
Society of Arts, 8.—'On Peat and other Vegetable Charcoal, and some of its Uses,' by Mr. Longward.
THURS. Numismatic, 7.
Royal Academy, 8.—'Architecture,' by Prof. Cockerell.
Society of Antiquaries, 8.
Royal, 84.—'The Bakerian Lecture 'On the Nature of the Force by which Bodies are repelled,' &c., by Dr. Tyndall.
Royal Institution, 3.—'On English Literature,' by Mr. Donne.
FRI. Philological, 8.
Royal Institution, 84.—'On the Nature of the Force by which Bodies are repelled from the Poles of a Magnet,' by Prof. Tyndall.
SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

Lectures on Ancient Art. By M. Raoul-Rochette. Hall & Co.

M. Rochette appears to be a clear-headed man, with a sincere antiquarian love of Art,—but he is not an original thinker. He can weigh testimony,—compare Etruscan and Grecian Art,—discuss the transformation of the mummy of Egypt into the Venus of Greece,—and there an end. His human eyes are keen, but his spiritual insight is below the average.

Art is not a question to be treated with the elaborate and tedious dullness with which be-wigged men discuss a deed of settlement. The chemist may bind the invisible spirits of the atmosphere, and weigh the gases that are their essence; but such process will not enable an artist to paint the air better or a poet to describe it more glowingly. A philosopher might as well begin to study the human mind by counting the articulations of the spinal column, as a man expect to grow from an antiquarian into an artist. We are glad, therefore, to see M. Rochette at once disown all attempts to verify unascertainable dates by arguments founded on controvertible data, and proceed at once to discuss the broad principles which regulated the development of Grecian Art. We only lament that about these principles M. Rochette teaches us nothing new. He brings us down later than the German writers, and recapitulates a few of the latest archaeological discoveries, much in the manner of an annual register or an historical log-book; but he does not help us to read the mysteries of Greek Art by the light of nineteenth-century canons. He does not tell us what portion of the art of Phidias was eternal and what local and accidental, and gives us no help towards discovering how far the religious spirit of Paganism should be revered by Christian sculptors of a Christian country. Long pages at the present day on the Jupiter of Phidias or the Iphigenia of the prudent Timanthes are really works quite unneeded. The youngest Art-student needs not to be informed that the love of the Beautiful was the predominating principle of Greek Art,—that a knowledge of the nude conduced to the excellence of Praxiteles and Polykletus,—or that with the Greeks Expression was kept subordinate to Beauty. Every painter knows this before he enters our Academy,

and it may all be learnt, without reading Pliny or Lanzi, by a day spent in studying the Elgin Marbles. In an encyclopædia we could not blame a writer for summing up these elementary facts,—but we do find fault with them in a work, that is not a handbook nor a class-book, but a book intended for the general perusal of a nation, whose mathematical love of rule has long kept it bound to the dead body of the past. Lectures such as these are not commensurate with the advancing love of Art in England (and, probably, not in France); they are "stale, flat,"—we could almost say, "unprofitable." They leave our doubts unsettled, our errors unrooted, and bring us no further on the road towards perfection.

A modern writer on Greek Art has heavy responsibilities. He has to decide whether Art has or has not reached perfection:—if it has, where? and how? Can a Christian attain it on the old Pagan principle?—and must he remodel impure deities, in whom he does not believe? These are the questions that vex our sculptors, who are too fond of or too indifferent to Nature; and the lecturer who avoids these subjects is a juggling prophet, who prophesies to earn his mess,—one whose visions are unhealthy nightmares and by no means dreams inspired by Heaven.

This fact cannot be controverted:—*Religion has in all ages been the vital principle of the highest Art.* It was so in Athens when Phidias shaped out his Minerva,—it was so in Pisa when hooded men painted the Campo Santo. To religion we owe the Apollo and the Venus, the Elgin frieze and the Theseus, Raphael's 'Ascension,' and Leonardo's 'Last Supper.' No other feeling of the mind has been found capable of producing like wonders. Redundancy of animal vigour gave us a Salvatore Rosa, a commercial principle Ostade and Denner, and personal vanity Kneller and Lely. Allow then these facts, which the experience of the Past seems to assure us are indications of an inherent principle of human nature, and not the result of accident, and to what inference do we come? That religion being the deepest, is the most powerful feeling capable of existing in the mind, and that religion produces the highest Art;—not another man's religion be it remembered, one that we laugh at and despise, but our own, the guide of our faith and the principle of our action. If we are answered, that Christian subjects do not admit of a sufficient display of the nude, and that the nude is necessary in an art whose province is form,—we must conclude that, such being the case, Sculpture can never again attain to its past perfection; and having acknowledged such limitation and inferiority, we have nothing left but to admire and measure, and copy and go on till the end of time casting new metal in the old mould.

To return to M. Rochette. He divides his book into twelve lectures. In his first, he discusses the question of Grecian Art being developed from Egyptian Art, denies such descent, and draws an obvious but correct parallel between the progress of ancient and modern taste. Dædalus and his school he compares to Cimabue and Giotto, who threw off the hieratic Byzantine trammels, just as the Greeks did the conventions of their religion. The parallel, however, does not hold if carried too far. Greek Art, advancing more slowly and more firmly—perhaps too firmly fixed in its principles—progressed for centuries; but modern Art declined as soon as it reached perfection. The author then proceeds to sketch Phœnician, Persian and Egyptian Art, and dwells much on the early petrification of the latter. He considers that the preservation of the dead body itself led very early to a dislike to its imitation. In his Fourth Lecture, he glances at Etruscan Art,—which he pronounces to be essentially Asiatic, and describes the sepulchral urns, the mirrors, bronzes, gems, tombs and paintings of Corneto and Volterra. In all Tuscan Art, from the tomb of Tarquinia to the works of Michael Angelo, he discerns the same rigid fidelity and energy—fidelity without grace and truth without beauty. The Sixth Lecture brings us to a geographical view of Greek Art from the ærolites and Hermes to Dædalus, Phidias and Praxiteles. The Æginetan school is then considered, and the love of the Beautiful shown to be not merely a Greek

principle, but a Grecian institution. The book concludes abruptly with a memoir of Phidias.

On one subject alone is M. Rochette original,—and on that he is wrong. He is an advocate for making marble a mere substance to receive paint, and approves, in a word, of colouring statues.

NEW PUBLICATIONS.

Our Lord bearing the Cross. From the Altarpiece in Magdalen College, Oxford. Hering & Remington.

A well-executed, neat line engraving, without great pretensions, but yet bold and simple in its effects. The feet and hands are carefully executed, but the head is rather timid. The hair of the beard is particularly weak and characterless, and the curls that droop on the neck are woolly and wanting in form. We always receive with pleasure an engraving of a good religious picture, as it tends to keep down the thousand vapidities of Art that daily delude the religious public, and induce them to empty their pockets of good money to fill their houses with bad pictures.

Portrait of Samuel Rogers. From a Daguerreotype. By E. Paine. Hering & Remington. THE likeness is indisputable; but, as a lithograph, the thing is worthless, coarse, confused and muddy. Our pleasures of memory are not increased by such a recollection of the aged bard, and we regret to see another of those average dullnesses that serve simply to fill a shop-window. Such a subject should not have been given to a young hand, that had yet hardly learnt to use his pencil.

PHOTOGRAPHIC SOCIETY.

IF universal Art progressed as fast as this small scientific branch of it, we might soon look for new Phidiases and new Raphaels. The second annual Exhibition is now open in Pall Mall, and presents evidences of great improvement. The portraits are broader and clearer and the compositions more artistic. The views from Nature are wider and more varied; animal life is well represented, and still life is most successfully handled. We have scenes, not copied, but literally brought away bodily, by solar enchantment, from Normandy and Venice, Stamboul and Egypt. Last year the photographers seemed all experimenting, timid, uncertain; this year they aim at artistic effects, and seem always trying to form pictures and not sketches. Water still seems to defy the rulers of the sun, while air is more and more enchained to their service. In one view of York Minster, seen from the walls of the city, the wind seems blowing and the sky rocking past; but the water remains turbid, foggy or metallic,—its transparency is lost, and it remains solid, vague and earthy. This fresh element we hope, however, will be annexed to the territory of Photography by the time of the next Exhibition. We do not say that there are no ink-blot pictures and no skies with unfavourable eruptions, for many varieties of cutaneous disease still torture the children of the sun. In skies Mr. Sherlock has made some fresh conquests, arresting the most fleeting vapours. With such lessons for the landscape artist, no such mistake of cloud regions as Mr. Ruskin points out in living painting will henceforth be tolerated. Perhaps, like young painters, the photographers are too intent at present on the mechanism of their art to attend to its highest capabilities, and too uncertain of the extent of their powers to acknowledge its proper limitations. A debateable ground still lies between the high artist and the artistic mechanician, and its boundaries are not yet defined. How far the two professions may mingle is uncertain; that they cannot exchange vocations is evident. A bad artist may, however, make a good photographer; and so two arts will be benefited. A bad photographer turning painter may find means to rival the sunshine of Cuyp without even the aid of sunlight. For artistic reference we might advise photographers always to make a note of the hour, day and month, of their studies: this would verify their truth, and greatly increase the professional value of their specimens.

One feature of this year's Exhibition are the excellent copies of prints, *alti-rilievi*, vases, drawings

and etchings. It is rather as thus superseding engraving than painting that any fear need be felt of Photography by those who are fed by Art. Instantaneous and perfect copies of pictures make the slow labour of the engraver comparatively useless, except in the higher branches of his art. In colour we see no great progress,—nor does it seem likely that anything but the light and shade and composition of nature will be caught by even those wonderful spells that force the sun to do our bidding. Stonework is copied to perfection, tree trunks with equal success,—but the smaller things are apt to turn into dark wires or feathery nothings. Water is a failure, skies are uncertain, and grass remains microscopic and confused.

To Mr. Sherlock's studies we must decidedly give the preference, as superior to either the English, French or German specimens. His rustic studies, a *Country Girl* (No. 144) and *Boy peeling Turnips* (253), are admirable, both for lucidness, detail and composition. In still life, the *Chinese Card-rack* (286) and *Shields* (293), by Mr. F. Bedford, are so bossy that they compel us to appeal to touch to verify or refute our sight. In ambitious attempts at higher art, Mr. L. Price stands almost alone. His *Ginevra* (387), with a better-chosen model, would have been a beautiful and original illustration of the well-known subject. Mr. Cundall, in his *Stepping Stones over the Wharf, Bolton Abbey* (416), has given us a Wordsworth scene,—but failed, as usual, with the water. In *Trees* (19) Mr. H. Owen stands foremost for detail and perfection of clearness.

This science is the free trade of Art; and everyone may now be an artist in his spare moments without toiling for years over laborious mechanism. Its charm is, that the simplest student may become a discoverer, and that his results may be always greater than he had expected. The most evanescent moments of life may be arrested, and only indifference or prejudice can now excuse those who refrain from obtaining portraits of parents and friends, who, perhaps, in a few days may be removed by death. Historical events will now be recorded with indisputable accuracy, and we shall no longer have to depend alone upon the verbal reports of ignorance or animosity.

Photography may be to Art what printing was to literature. It will widen, but perhaps not deepen, our national love of nature.

All conversant with that pleasant book of Miss Howitt's 'The Art-Student' will be glad to see, in this Exhibition, copies of Kaulbach's Cartoons, described by her when at Munich.

FINE-ART GOSSIP.—We are informed that 4,500 persons during the past month availed themselves of the opportunity to inspect the examples and casts supplied by the Government at a reduced price to the Exeter School of Art; and that thereby many were led to avail themselves of the advantages offered by the school may be inferred from the fact, that no less than seventy-two have already joined the artizans' class, a number unprecedented at the commencement of any one of the forty-eight schools established in this country. The other classes are also well attended, and there can be little doubt that the school will be entirely successful.

A mine of Roman antiquities seems to have been discovered at the village of Whifton, near Ipswich. A tessellated pavement of some beauty and several walls have already been laid open.

The German Art-papers speak highly of a grand historical picture by Herr Feuerbach, of Karlsruhe. The subject is the Death of Aretino, the satirist, a famous poet of the sixteenth century, who died at a drunken feast. He is represented crowned with ivy, and the cup is dropping from his freezing hand.

The whole Academy of Vienna are employed in illustrating a Prayer-book, as a present to the Empress of Austria. The *Deutsches Kunstblatt* speaks of it as creditable to the art of the present century.

The grave and altar of Pope Alexander (a martyr) have been lately discovered in the Via Momentana, at Rome. Pillars, richly ornamented, support the

vault, which is descended to by a flight of steps. Marble slabs, with inscriptions of the fourth century, have also been found; and the works are pushing on, in spite of the rains, with great zeal.

On the Continent, Art receives every week some public acknowledgment. The other day the King of the Belgians knighted Carl Hübner, a painter who has lately gained honours.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS. Willis's Rooms.—FOURTH SEASON OF CLASSICAL INSTRUMENTAL CHAMBER MUSIC. The Reserved Seats of Subscribers, 1854, not claimed by the 1st of February, will be let to new applicants. The dates of the Concerts are Thursday, February 15, March 1, 15, 22, and 29. Subscription, 30s. Single Admission, Half-a-Guinea. Seats for parties of five may be secured, and for schools a sixth admission will be given free, with reserved places. The best talent will be engaged. For a list of Patrons and other particulars vide Prospectus and Records of the past seasons, at Cramer & Co's, Regent Street, Chappell & Co's, and Oliver's, Bond Street. The Musical Union Record, of 1854, has been sent to members by post, Parcels Delivery, and messengers. Any omission will be rectified on applying to J. ELLA, Director.

ST. MARTIN'S HALL.—'The Nativity.'—The quietness with which the Englishwoman studies, and puts forth the fruit of her studies, must strike all conversant with foreign female genius or learning. We shall in England find such remarkable appearances as a Paintress skilled enough in the difficulties of antique Biblical geography to write concerning it as one of the first authorities of her time,—as a Poetess taking to her sick room Plato—not Petrarch—for her bosom friend,—as a Lady sufficiently versed in logarithms to teach seafaring men navigation. But we must seek ere we find; since neither paintress, nor poetess, nor professor is advertised, by her published portrait,—by her repeated repartees,—still less by her admitted aberrations. Restless as our world increasingly grows, the power implied by this stillness and absence of self-display is doubly remarkable. In creative Art, of course, there must be somewhat more of publicity and pretension when production is attempted; and yet, within the sphere of illustration just glanced at, comes the Oratorio performed at St. Martin's Hall on Wednesday evening. This is the work of a Lady, known as having been for some years unobtrusively engaged in tuition, and this so largely (report says), that were she to choose to shelter herself behind the excuse made by English composers of the sterner sex for want of energy, she has had abundant reason for so doing.

The above preamble was necessary, in order to put 'The Nativity' in its right place. Whether any oratorio by a woman has ever before been performed in public, is a problem which we leave to some musical "noter and querist" to answer. We are satisfied that few, if any, better musical works of such length as 'The Nativity' have been ever written by any woman, in any style.—Those who pass over Mrs. Bartholomew's faults with indiscriminate compliment, only show so much covert contempt of, not courtesy to, her sex. These faults are such as opportunity and self-scrutiny may remove. First, she has set to work too thoughtlessly. Certain peculiarities in the book of this oratorio are nothing short of objectionable. Some of the finest passages and phrases of Scripture set by the great masters have been treated by her anew. Fancy, for instance, that most exquisite of narratives 'There were shepherds,'—which, thanks to Handel's inspirations, has become part of everyone's musical evangel—set again!—A new 'King Lear'—a new 'Macbeth'—would be hardly less decorous than a challenge such as this; which seems expressly devised to excite comparison betwixt Handel and Mrs. Mounsey Bartholomew. She herself is answerable for the inevitable reproof conveyed in such a juxtaposition.

Nevertheless, with the lady thoughtlessness does not mean want of study or want of means. Though she has applied her art carelessly—we will not say arrogantly—to passages which she had better have left alone, she has art to apply, and a fair amount of science. She has idea, too,—a vein of natural and proper melody. Her wants are inevitable to inexperience,—being want of proportion—want of orchestral variety. Like other writers who have tried their wings seldom, she has been too anxious to make of her oratorio a "multum in

parvo by breaking it up into a number of short movements. It is a mistake, too, to require eight principal *solo* singers for a work in so narrow a compass. Among the pieces which deserve specification are the *arietta* 'O! Zion,' the *duetto* 'Lo, this is our God'—the unaccompanied quartet 'Trouble and anguish,'—the airs 'Lift up thine eyes' and 'Behold thy servant,'—the last a tuneable and pleasing composition for a *mezzo-soprano* voice. Two choruses, also, may be specified, 'Trust ye in the Lord,' and 'How blessed are the eyes,' as clear, flowing and nicely written; then a well-known street carol is happily harmonized for a semi-chorus and pastorally scored, in 'Come, let us go to Bethlehem.' In other numbers the orchestra clogs rather than sets off the voices. Throughout the work, its orchestral is more mannered than its vocal portion. To name one mannerism, the penultimate shake for the instruments instead of the voices, which was one of Mendelssohn's fancies,—and which, though a Mendelssohn fancy, is an illogical one—recurs too often. Mrs. Bartholomew has no need of such imitations to establish the semblance of a style.

The work was well performed, thanks to Mr. Hullah, who merits better of English musicians for the amount of aid and opportunity afforded to them, and not without risk, than any contemporary.—The principal singers were Mrs. Enderssohn and Miss J. Bleaden, Miss Huddart and Miss Palmer, Mr. Allen and Mr. Montem Smith, Mr. Weiss and Mr. Buckland.—There were several *encores*. But that the *Society of Female Musicians* appears to have an Amazonian disdain of male counsels, we should recommend it strongly to make this oratorio "a standing feature" at its concerts, at the same time recommending Mrs. Bartholomew to recast some portions, and to reconsider it throughout. The success on Wednesday was such as to justify her in taking any amount of trouble to give it permanence.

ST. JAMES'S.—'Alcestis,' by Mr. H. Spicer, was produced on Monday. The piece is not strictly a translation from Euripides, but an amalgam composed from the Greek play, certain foreign operas, and other dramatic attempts. The result is, accordingly, a light and somewhat elegant drama, with musical accompaniments, not deficient in pathos and theatrical effect, but without the severe beauty of that classical production which was so dear to Milton, when he thus alluded to it in the 'Sonnet to his deceased Wife.'—

Methought I saw my late-espoused Saint
Brought to me like Alcestis from the grave.

We do not, therefore, feel ourselves called upon to review this performance as if it were another example of the principle that led to the exhibition of the 'Antigone' and the 'Iphigenia.' We must accept it for what it is: a compromise between the ancient and modern stage, with some musical illustrations from Gluck's opera. Nor must Miss Vandenhoff's claims be overlooked, who has been expressly engaged for the representation of the heroine. To this distinction the gifted actress was entitled; she had earned it by her admirable impersonation of the *Antigone*. Miss Vandenhoff gave that peculiar sculpturesque effect to the part which is the especial charm of her acting; and in the second and third acts of the drama, which represent her dying and restoration to life, accomplished most artistically those motions and attitudes which remind us of the ancient statues,—in a series of *poses*, the beauty of which extorted the admiration of the audience. Mr. Stuart was unexpectedly decorous as well as powerful in *Hercules*. The contest between him and *Orcus*, in the last act, was a dangerous stage-expedient,—but it was managed with great tact, both on the part of the actors and the machinist. Care had evidently been bestowed to make the incident safe;—it was made successful. The house was crowded with a fashionable audience, the applause was frequent, and the performance appeared to afford general satisfaction.

When, last week, we announced the production of 'Alcestis' with Gluck's music, we protested against the introduction of the opera-choruses—as a proceeding at variance with the taste of our

times, which is, to respect the original form and purpose of all works of Art. We return to the matter as a question of principle with which the momentary success or failure of the experiment has nothing to do; and such reconsideration is made needful by the fact, that a musician of eminence has lent himself to the maltreatment of one of the master-works of music. It is perfectly true that Sir Henry R. Bishop was trained in the worst possible school. It is perfectly true that in 'Hofer' (an adaptation of 'Guillaume Tell') he could take such liberties with Signor Rossini's opera as the poking a passage from the introduction of the overture into the midst of Matilda's *bravura* (shortened and transferred from a *soprano* to a *bass* voice);—but it might have been hoped that Sir H. R. Bishop had learnt better things from time and experience, if not from an artist's appreciation of Art. Where is he now? At the head of an English Opera?—as the composer of 'Bid me discourse,' and 'By the simplicity,' and a thousand more charming English songs, ought to have been and might have been.—It is such improprieties as the present one that have kept back all hopes of the establishment of a native musical drama in this country.—Mr. Spicer, being no musician, might be excused for desiring to make the representation of his version of 'Alcestis' as attractive as possible. Mrs. Seymour, too may be absolved, "as meaning no harm," considering that the unscrupulous humour of English theatrical managements has become an epidemic disease, which we may hardly look to see purged out of the fraternity for half-a-century to come, and that she has only done what Mr. Macready did before her when reviving the 'William Tell' of Mr. Sheridan Knowles;—Mr. Guernsey, even, as a musician hitherto principally known by his *Polkas*, might be forgiven for fancying it promotion to figure as the "arranger" of Gluck!—but the want of propriety in Sir H. R. Bishop, a composer himself, and (to make matters worse) a composer of operas, cannot be too strongly protested against. Our respect for his powers strengthens our remonstrance against such licence in the mis-use of them.

PRINCESS'S.—The 'Louis XI.' of Casimir Delavigne, produced on Saturday, has been prepared for the English stage by Mr. D. Bourcicault. The tragedy was placed upon the boards without those aids of pictorial costume and new scenery that have been customary at this theatre. The present performance, it is stated, is an experiment how far the public will accept Mr. Kean's acting, in new characters, on its own merits, and apart from the usual display of accessories. Spectacle and melodrama have indeed been tried, and have proved, what we long ago predicted, to be ultimately not profitable. A change of principle is, therefore, resorted to, which we should all the more have welcomed had it been made with an original production, instead of a translation. That such trials have not hitherto eventuated satisfactorily has been owing either to some mishap of locality, or to the manifest inefficiency of the histrionic talent employed, and not to the want of dramatic genius. Neither of these sources of disappointment could have operated in the present instance, and the success of 'Louis XI.' has, indeed, resulted from the advantages of position and professional skill. The character of the monarch, as drawn by the French poet, was exceedingly well adapted for Mr. Kean's peculiar style; and Mr. Bourcicault, in his acting version, has so manipulated the dialogue, that opportunity is given for the display of those elocutionary effects and transitions in which Mr. Kean habitually indulges. We have accordingly, and beyond doubt, a remarkable stage-hero likely to serve the actor's purpose and increase his reputation. But the best critics on the drama have most objected to this sort of histrionic clothes-horse manufacture. The *Lear* of Shakspeare, it will be recollected, was once subjected to this process, and a theatrical hero was made out of the dramatic, which for a long while was exclusively patronized by starring actors. We have lately amended that, and condemned the system. M. Delavigne had, however, such a manufacture in view from the beginning, and therefore Mr. Bourcicault has not

altered, but only intensified the author's original design. *Louis XI.*, both in his French and English dress, is a mere creature of the stage, not the monarch of history. Civilization was much indebted to this king, who was a shrewd man of business, and criminal as much from position as from disposition. A stage-hero depends, however, upon his rigid consistency; he must be the same from the first scene to the last, a decided individuality. No matter how unnatural this rigid portrait may be, the actor finds his account in going through with it, without change or compromise. The historical Louis XI. is a *man*, whose motives we can partly understand, whose place in the series of social developments is defined, and who sometimes merits censure, and at others commands admiration. But the stage-hero is a *demon puppet*, who can only proceed in the direction of the wires, and sports the same mask throughout the piece. We hold that the historical character, with its lights and shades, would have been also the dramatic one; and, in its allegiance to truth and nature, the more instructive and pleasing delineation. We believe that Shakspeare would have treated it on the higher poetic principle, and have thereby created for us another human character as philosophic in principle as it would have been historic in outline. Instead of this, we have a mere theatrical portrait, though intended in its way to be a psychological study. The object is one thoroughly repulsive, because compounded wholly of evil elements, and those of the most disgusting kind. Subtlety, jealousy, suspicion, unscrupulous ambition, wholesale assassination, the most abject cowardice,—these are the qualities which Mr. C. Kean is required to personate. In doing this his success was complete; and it may be added that, in the hands of competent actors, such thorough-going, one-sided parts have always proved efficient. It is much easier to impersonate the active criminal than the passive sufferer. Progress and bustle lend the former a special stage-eligibility. It is, therefore, in this class of assumption that Mr. Kean has achieved a decided triumph. But we must not over-estimate it, as if it had been won on a higher field of Art.

MUSICAL AND DRAMATIC GOSSIP.—There seems to be no ordinary difficulty in finding any one willing or able to take the conductorship of the *Philharmonic Concerts*. Every new day brings the report of some new appointment attempted. We have successively heard of Dr. Spohr, Herr Halle, Herr Lindpaintner, M. Berlioz, Mr. Lucas, as invited to accept office. There is even a wandering whisper, that the committee has sent for Herr Wagner!—All these runnings-to-and-fro are as significant as they are strange. So long as Signor Costa was installed as head of the *Philharmonic orchestra* it was a favourite notion with a large party in the profession that, could he be withdrawn, half-a-score of conductors as competent might be found in London only. How is it that some of the gentlemen then so frequently named seem now to be so resolutely passed over? How is it that a London society must needs look to Stuttgart for the aid of a musician who, be he ever so respectable in attainments and amiable as a man, has proved in no point remarkable at the head of an orchestra? How is it that they must cross over to Paris to solicit assistance from a composer, whose peculiarities have been so little relished by the classical and conservative public of *Philharmonic subscribers* that on a recent occasion of his appearing before them, as an invited guest, the common courtesy of "silence for dissent" was not observed with regard to his music, but the visitor was received with partial disapprobation? Good memories, we know, are inconvenient things; and unhappily too many tales are current of grievances and differences "behind the curtain" for us to wonder at any inconsistency which may be committed by the Committee—at any resolution which may be come to. But truth must be told till the end comes. Till we hear of the entire reconstruction and remodelling of the *Philharmonic Society* we shall probably be called on to watch the result of experiments, each one more desperate in evasion of difficulties known but not confessed than its

predecessor; and at no distant period we may have to write the epitaph of the only musical society by which a quarter of a century ago England was known on the Continent.

Remonstrances having reached us to the effect that the *Athenæum* has understated the claims of the *New Philharmonic Society* on musical support, and has unfairly represented Dr. Wylde as independent of, or undirected by directors, we return to the subject. In the printed prospectus forwarded to the *Athenæum*, we perceive that a Chairman "to the board of directors" is advertised. This is The Right Hon. Lord Suffield, with whose attainments in music the public is as yet unacquainted. None of "the board," however, are named. This confirms our former statement; but let us be more explicit, to avoid further possible misconception. We conceive that a distinction exists betwixt capitalists who assist a private speculation, and directors worthy of musical confidence who collectedly manage the musical concerns of a musical society. The former, we do not doubt, may—must—be found in aid of the *New Philharmonic Society*; in fact, it is understood that three gentlemen of high standing in the world of mechanics and engineering have supported the undertaking with guarantees, one of whom has this year withdrawn; but that they are not musical directors may be inferred from their keeping in the background. Who, then, are the musical directors? Who are the parties responsible for engagements and selections? Are they the same who retired in consequence of the non-renewal of the engagement of M. Berlioz for the concerts of the second season?—the same who last year advertised the positive re-engagement of Herr Lindpaintner as conductor for 1855?—both which facts were duly noticed by us as they were published. Further, by whom are any such directors, musical or unmusical, elected or re-elected?—by any body of musical members, professors and associates?—by themselves?—or by Dr. Wylde? We have never asked for more than a plain statement of the constitution of this *New Philharmonic Society*, with its laws and its by-laws, and with less than this the world of artists and amateurs will not rest satisfied.

The *Harmonic Union* (otherwise that portion of the late society not incorporated with Dr. Wylde's society) has published its programme for the season. Herr Molique has undertaken the duties of conductor, and the meetings are to be held in the Hanover Square Rooms, as we have said. There are to be eight concerts in the season, on Wednesdays, commencing on the 31st of January. The promises of the music which is to be performed are strangely worded.—Among the works which will be put in rehearsal, and which the Directors hope to be able to perform during the season, may be named—Handel's 'Messiah,' Handel's 'Acis and Galatea' (with Mozart's accompaniments), Handel's 'L'Allegro ed il Penseroso,' Haydn's 'Creation,' Haydn's 'Seasons'; Symphonies, concertos, &c., by Beethoven, Mozart, W. S. Bennett, and other eminent composers; Beethoven's 'Ruins of Athens,' Mendelssohn's 'Elijah,' Mendelssohn's 'Lobgesang,' Mendelssohn's 'Walpurgis Night,' Mendelssohn's 'Part Songs,' Rossini's 'Stabat Mater,' Naumann's 'Christus.' The Directors can hardly "hope" to rehearse even, still less to perform, eleven full works at eight concerts, besides "symphonies, concertos, &c. &c." The paragraph, we suspect, should have run—a selection will be made from "among the following works."

The *Amateur Society* will commence its meetings on the 5th of February.

M. Julien does his part in bringing forward new music by English composers. Mr. A. Mellon's overture to 'Romulus,' produced some days ago at his concerts, has clever points in it,—erring, perhaps, from awkwardness rather than want of construction.—The Beethoven Evening was given this week.—Signor Bottesini, who was promised on his arrival from America, had not arrived.

We are requested to give publicity to the fact of a bequest of 200*l.* having recently been made to the *Society of Female Musicians* by the late Miss Lydia Leeke.

Among the minor music of the week may be

mentioned Mr. C. Salaman's Second Lecture, and Herr Goffrie's last *Soirée*.

A compliment in the spirit of the hint offered by a Correspondent a few weeks since has just been made by the Directors of the Sydenham Palace, in the shape of a ring and a medal, forwarded to M. Mohr, the director of the band of *les Guides*, commemorative of their visit to England. We still wish that this could in some form have been extended to all the capital players, knowing what value the French (in these things child-like) attach to such courtesies. The willingness of our neighbours to come across the Channel in helpful goodnature seems to have no limit, and must astonish those who, scarce a couple of years ago, conceived that France did nothing but sit on her shores studying at which point of ours she could most vexatiously and murderously commence her great invasion of England. The other day Dover was made merry by a visit from the musical societies of Calais and Saint-Omer, who visited that key-town for the purpose of giving a concert in aid of our Patriotic Fund. The visit and the concert went off with the utmost cordiality and success.

We are informed that Madame Clara Schumann intends visiting London this season. The Lady needs no introduction—she has been long renowned throughout Europe, as, probably, the most masterly female player of classical music who has ever been heard;—but the circumstance which has led her to resume concert-giving and concert-playing with renewed activity,—the painful illness of Dr. Schumann,—may be adverted to without impropriety, as adding other sympathies besides a love of the highest art, to our kindly welcome and cordial wishes for her success.

Since we have been in the habit of citing M. Berlioz as the French critic in whom we have placed the greatest reliance, we cannot pass over a case of conversion on his part more complete than any we recollect. Those who have been used to follow his *feuilleton* in the *Journal des Débats*, and the opinions extracted from it into the *Athenæum*, will read with surprise his glorification of Madame Stoltz on her late re-appearance at the *Grand Opéra* in 'La Favorite.' M. d'Ortigue had already announced that the *prima donna* had offered to sing 'La Captive' at the second concert of M. Berlioz, but this surely cannot have wrought the metamorphosis with the composer-critic. We heard the Lady ourselves not many months since, and failed to discover any regeneration in her voice and style. It is painful to have our faith shaken in one source of information and instruction after another,—but this must be our present case, or else we must believe in miracles.

Signor Pacini is expected in Paris to superintend the rehearsals of 'Gli Arabi nelle Gallie.' 'Le due Guide,' by Signor de Giosa, which has been just produced at the *Teatro Nuovo* at Naples, is said to be its composer's best work. The two new carnival operas at Milan are to be 'Ines,' by Signor Chiaramonte, and 'Le due Regine,' by Signor Muzio.—Signor Capecelatro's 'Gaston de Chanley' has been given at Florence with great success.—Meanwhile 'Les Huguenots,' excellently sung, say the Piedmontese journals, by Mdle. La Grua, Signors Bettini and Belletti, has taken root at Turin.—In return, Italy is about to lend another tenor to be tried at the *Grand Opéra* of Paris, named Signor Mazzoleni,—and the new *ballet* there, with M. Labarre's music, 'La Fonti,' is a tale of the misfortunes of an Italian *danzatrice* who figured on the boards one hundred and five years since, and who is personated in the Rue Lepelletier with great brilliancy, versatility and pathos by Signora Rosati.

Our contemporaries announce a curious breaking out of music in the kingdom of Naples and the Sicilies. The army in Sicily, they say, is to be taught part-singing with a view of enabling the soldiers to be heard as well as seen in processions, on saints' days and holidays.

Some of the theatrical rumours of the month are worth putting on record. One is a whisper of a comedy by Mr. Thackeray, in preparation for Mr. Wigan's Olympic company. Number two is, that the Spanish dancers are about to return, with added

force, to the *Haymarket Theatre*—number three being the probable re-appearance of Miss Helen Faucit (under Mr. Buckstone's management) in a new drama. Tale the fourth tells us that we are not to make sure of M. Meyerbeer's 'L'Etoile' at Drury Lane. Failing this opera, is the manager prepared to fall back on Gluck's second 'Iphigenia' in English?

MISCELLANEA

Vesuvius.—Our Neapolitan Correspondent writes:—"The expectations of the visitors have been much raised by the prospect of an eruption of Vesuvius. Indeed, for a year past there have been predictions and appearances of such an event, though at present they have assumed a greater probability. On the top of the cone of Vesuvius, says an accurate observer, a large and deep abyss has opened, from which issues much smoke. It lies near the base of the Punta del Palo, the name given to one of the three craggy points at the top of the cone facing the north. Its diameter is about 100 metres, and depth somewhat more. Its walls present a series of strata of basalt, broken, however, for the reason that a part of the interior of the crater has fallen in. The soil surrounding this abyss presents wide fissures, showing that a great part of it threatens to sink in; and, indeed, a considerable space about the Punta del Palo must shortly be swallowed up in the abyss. To the geologist the present appearance of Vesuvius must be very interesting, as the cut through the crater is so clear and deep as to reveal distinctly the several stratifications. The usual path to the cone is now interrupted, and great care is required not to approach too near the precipice, as the soil is ready to be precipitated into the same abyss which has already thrown out so much material. The old guides say that everything indicates an approaching eruption; but as yet the smoke does not issue with a sufficient impetus, perhaps, to justify that belief. Indeed, the present smoke may be only vapour arising from the copious rains which have fallen through the various fissures into a higher temperature, and are being again ejected in another form. Should the Punta del Palo fall in, the strongest point in the top of Vesuvius will be wanting, and the form of the mountain will be altogether changed."

Half-penny Sea-Postage.—All the friends of cheap ocean postage must be highly gratified at the recent postal convention between this country and France. By this arrangement we have more than we asked "by half." For the most sanguine and hopeful advocates of a reduction of sea-postage on letters have, I believe, never expected that the charge for the mere transit service should be less than one penny per single letter. But by this new arrangement with France, the whole postage on a single letter between any town in that country and any town in the United Kingdom has been reduced to *fourpence*, of which the French Post Office is to have twopence halfpenny for its inland service, and the British three halfpence for the English inland charge and the Channel transit. This gives only a *halfpenny* for the sea-postage on a letter thus transmitted. Is not this far better than our best expectation? It is sincerely to be hoped that the French are long will reduce their inland charge to one penny; so that the whole postage on a letter between the two countries shall not exceed twopence halfpenny. Here, then, are two links in the chain of ocean penny postage already established—viz. between England and France, and between the United States and Australia. One of vast importance still remains to complete the chain in that direction; that is, the link that shall span the Atlantic. A resolution on this subject has already been introduced into the American Senate during the present session. We are confident that the United States Government are ready to co-operate with that of Great Britain in establishing an ocean penny postage between the two countries this very year. If the friends of this important postal reform will exert their influence in its behalf, they may see its consummation sooner than they ever expected.

ELIHC BURRITT.

A NEW DESCRIPTIVE CATALOGUE of EDUCATIONAL WORKS, and WORKS in SCIENCE and GENERAL LITERATURE, published by WALTON & MABERLY, will be ready this Month, and will be sent (free) to any one writing for it.

Instead of laudatory extracts from reviews, general notices are given of the chief subjects and most prominent peculiarities of the books. The publication is designed to put the reader, as far as possible, in the same position as if he had inspected for himself, at least cursorily, the works described.

Now ready, cloth, richly gilt, 8vo.
price 10s. 6d.

HELIONDÈ;

OR,

ADVENTURES IN THE SUN.

Morning Advertiser.

"This work is at once imaginative and genial, learned and fanciful, wise and witty. . . . There is no doubt that 'Heliondè' is one of the most remarkable books which has been published for a long time, and will shortly be one of the most popular. Talk of Christmas books indeed! Here is one—not for children, but for girlhood, youth, manhood, and the accomplished lady."

Globe.

"For pretty conceits, gorgeous descriptions, elegant fancies, and unearthly wonders, 'innumerable of stains and splendid dyes,' it is long since we have seen anything to equal Heliondè."

Leader.

"Every paragraph in this octavo book, of more than four hundred pages, contains something ingenious, elegant, and fanciful; but almost every paragraph is referred to more than one classic original, in proof that the fancy is a fact, or is not at all more extraordinary than fifty similar wonders vouched for by high authority. . . . Many who are glad to surprise science in undress will walk here to pick up, in a few careless moments, tit-bits of learning and philosophy enough to make a dinner-table scholar and a drawing-room savant."

John Bull.

"The highly imaginative character of the book would be sufficient to attract and rivet the reader's attention, even without the additional condiment of rich humour, by which the writer furnishes abundant proof of his identity with the witty author of the 'Memoirs of a Stomach.'

Observer.

"Our business, however, is not to settle a controversy which probably will never be cleared up, but to direct attention to the graceful and brilliant kaleidoscopic picture which is here presented to us in a vision of the wonders of Heliopolis, the chief city of the sun, and its still more wondrous inhabitants. It is, on the whole, a pleasant and scholarly fiction, which will open up to the reader new and interesting views of the planetary system."

New Quarterly.

"Full of reading, and buoyant with fancy; and it is a wholesome and pleasant change to raise the eye, bloodshot by reflecting carnage, and to fix it upon the blue of heaven and the placid purity of God's firmament."

Also, by the same Author, FIFTH EDITION, of

THE MEMOIRS OF A STOMACH.

Edited by A MINISTER of the INTERIOR.

This Work, having been honoured with the most flattering eulogiums of the London Press (for which apply to the Publishers), translated into Foreign languages, and on the verge of a Sixth Edition, is now ready, boards, vignette. &c., 2s. 6d., or paper cover, 1s.

By JOSEPH GUY, Jun.
Magdalen Hall, Oxon.

GUY'S PREPARATORY ENGLISH GRAMMAR, for very Young Children. A New and Enlarged Edition, strongly bound, 6d.—"This work removes every difficulty."

GUY'S ROYAL VICTORIA SPELLING-BOOK, being really a First Book for Young Children; arranged upon a novel plan, and suited to the capacities of the duller learners. It combines in its useful pages a Primer, Spelling-Book, and Reader, adapted to modern improvements, and suited to the growing intelligence of the age. 18mo. with superior Engravings after Harvey. 17th Thousand. Price 1s. handsomely bound.

GUY'S LEARNER'S POETIC TASK-BOOK; being a choice Collection of Pieces chiefly from Modern British Poets. New Edition, price 1s. bound and lettered.

JOSEPH GUY'S PREPARATORY GEOGRAPHY for YOUNG CHILDREN: written expressly for their use, and to prepare them for Guy's First and Second Geographies. With Six Maps; and interspersed with Tutor's Questions and Exercises on the Maps. 2nd Edition, corrected. Price 9d. bound; or 6d. sewed.

GUY'S ENGLISH SCHOOL GRAMMAR. 13th Edition. 1s. 6d. red.—A KEY to the Grammar and Orthography, 2s. bound.

GUY'S NEW EXERCISES in ORTHOGRAPHY. 18mo. 10th Edition, enlarged. Price 1s. bound.

GUY'S SYNTACTICAL EXERCISES. A Companion to his Grammar. New Edition. 1s. bound.—A KEY to ditto, 1s. 6d.

GUY'S OUTLINES to WALKER'S THEMES and ESSAYS. Price 1s. half bound.

GUY'S NEW ARITHMETICAL PLAN; or, an Improved Method of Teaching the First Four Rules of Arithmetic, Simple and Compound. To which a complete set of Arithmetical and numerous Miscellaneous Tables are added. 10th Edition. Royal 18mo. 1s. bound.—A KEY to the same, 1s.

GUY'S IMPROVEMENT on the ETON LATIN GRAMMAR. To the usual Accidence of which fresh Examples and Progressive Exercises are added, and the Syntax and Prosody are given in English. New and cheaper Edition. Price 2s. bound.

"For Ladies' Schools where Latin is taught a more suitable Grammar could not be recommended."

By JOSEPH GUY, Senr.

Late of the Royal Military College, Marlow.

GUY'S NEW BRITISH SPELLING-BOOK. With new Cuts. 97th Edition. 12mo. 1s. 6d. bound.

GUY'S NEW BRITISH EXPOSITOR. A Companion to his Spelling-book. 14th Edition. 1s. 6d. bound.

GUY'S NEW BRITISH PRIMER. 26th Edition. 6d.

GUY'S NEW BRITISH READER of EASY WORDS and EXPLANATIONS. Many Engravings. 12th Edit. 3s. 6d. roan.

GUY'S FIRST ENGLISH GRAMMAR. 1s. bound.

GUY'S FIRST ENGLISH EXERCISES. 1s. bound.

GUY'S ELEMENTS of ANCIENT, MODERN, and BRITISH HISTORY. With Tutor's Questions. New and enlarged Editions. 12mo. 3s. 6d. each vol. roan. lettered.

* * * These three volumes contain lucid Histories of Greece, Rome, and the earlier periods of Ancient History, Modern France, Spain, Germany, Russia, and all the other Sovereign States of Europe, with China and America. British History gives England, Wales, Scotland, and Ireland under separate heads. The Ancient History is illustrated with a Map of the Ancient World, coloured.

GUY'S SCHOOL GEOGRAPHY. With Eight Maps. 22nd Edition. Royal 18mo. price 3s. red.—A KEY to the Problems and Questions. New Edition. 1s. 6d.

GUY'S FIRST GEOGRAPHY. With Tutor's Questions at the bottom of each page. Illustrated with Six Maps. New and enlarged Edition. 1s. bound.

GUY'S SCHOOL ARITHMETIC. 25th Edition. 2s.—A TUTOR'S KEY to the above. Price 4s. 6d. roan.

GUY'S FIRST ARITHMETIC. In Script Type. Royal 8vo. Useful as a Ciphering-book and an Arithmetic. 1s. 3d. half bound.—A KEY, 3d.

GUY'S COMPLETE TREATISE of BOOK-KEEPING. New Edition. Royal 18mo. 1s. bound.

THE SCOTTISH EDUCATION QUESTION.

By HUGH SCOTT, Esq.

of Gala.

Saunders & Otley, Publishers, Conduit-street.

NOTICE.

Under the special Patronage of Her Majesty and Prince Albert, Corrected throughout by the Nobility.

MR. LODGE'S PEERAGE AND BARONET.

AGE for 1855.

IS NOW READY.

The numerous changes in noble families and their collateral branches, by decrease, during the past year and in the recent memorable engagements, will render this New Edition of Mr. Lodge's Peerage one of the most important ever issued. As it is the only work in which the type is constantly kept standing, every correction is made in its proper place to the date of publication.

Saunders & Otley, Publishers, Conduit-street.

POETICAL TENTATIVES.

Now ready.

By LYNN ERITH.

"The poems show an experience, a sense of harmony, and a felicity of expression worthy of many a mature work."—*Athenæum*.
 "For facility of expression and felicity of fancy they are certainly remarkable."—*Ortic*.

Saunders & Otley, Publishers, Conduit-street.

PARISH SERMONS.

By the Rev. HARVEY GOODWIN.

3 vols. 12mo.

FIRST SERIES (Second Edition) 6s. 0d.

SECOND SERIES 6s. 0d.

THIRD SERIES (Just published) 7s. 0d.

** The Volumes may be had separately.

"Mr. Harvey Goodwin's 'New Series of Parish Sermons' has the same merits of brevity, force, and great simplicity, without baldness, which distinguished its predecessors. It is matter of congratulation that such Sermons are preached in Cambridge with success, and that there is a steady demand for their publication. They are really good."—*Guardian*.

By the same Author,

A GUIDE TO THE PARISH CHURCH.

Demy 18mo. cloth, 3s. 6d.

In these Editions the objectionable passages are omitted.

RIVINGTONS, Waterloo-place.

Just published, in 12mo. price 7s.

ARNOLD'S SCHOOL CLASSICS.

HORATI OPERA,

Followed by ENGLISH INTRODUCTIONS and NOTES.

The present Edition of Horace is based upon that of Dr. DÜBNER, but the Introductions and Notes have been abridged, and in many places re-written, and additional Notes introduced.

"A superior Edition, admirably adapted for school purposes, being copious and correct in information, but at the same time thoroughly practical in aim and character. Every allusion is explained, and every difficulty, whether of construction, translation, or prosody, satisfactorily cleared up. The abridgments of the Notes are highly judicious, and the additions derived from the best sources."—*Athenæum*.

RIVINGTONS, Waterloo-place.

WEDDING GLOVES.

London: published by the Company of Stationers, at their Hall, Stationers-court.

HUGHES'S READING LESSON BOOKS.
—Mr. EDWARD HUGHES, Head Master of the Royal Naval Lower School, Greenwich Hospital, begs respectfully to direct public attention to his Series of

FIVE READING LESSON BOOKS,
well illustrated, and suited to the educational requirements of the present day.
These Books are carefully graduated, so as to lend the pupil step by step from the observation of the simplest to the comprehension of the more complex phenomena of Nature. They are now being practically tested in the school under the Editor's care. The First Book, which is now ready, 12mo. 448 pp. price 3s. 6d. contains—
1. How to get Knowledge, and the Use of Books.
2. Scientific Biography.
3. Physical Geography.
4. Geology and Metallurgy.
5. Vegetable Physiology.
6. Animal Physiology.
7. Natural History and Ethnology.
8. Political and Domestic Economy.
9. Chemistry and its Applications.
10. Arts and Manufactures.
11. Mechanics and Mechanism.
12. Natural Philosophy.
13. Astronomy.
14. Fine Arts.
15. Literature.

Influenced by the idea that no individual could do complete justice to the numerous and varied regions of knowledge necessary to be surveyed in such a series, Mr. HUGHES has sought, and obtained, the co-operation of men eminent in science and literature, as also of well-known and valued practical educators. In this way theory and practice will go hand in hand, and correct each other. The articles are written by—

Allen, Joseph, Esq. R.N.
Allman, Dr.
Arnaud, M. G., Esq.
Baillie, Henry, Esq.

The names of the contributors are a sufficient guarantee that the matter of the books will be of the highest class, and it will be the Editor's business to see that the *form* in which the various articles are presented shall be suitable for general instruction. The experience he has already had in preparing school-books, and the success which has attended his labours, inspire him with a confident hope that this Series will both supply an admitted want, and give general satisfaction.

Also, just published, price 3s. 6d.

ENGINEERING SCHOOL CLASS-BOOKS.

In cr. 8vo. 4s. 6d. bd. with 220 Diagrams engraved for the Work.
EUCLID'S ELEMENTS OF PLANE GEOMETRY, with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.B.
Author of the 'History of Maritime and Inland Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning. The few remarks on Geometrical Analysis in the Appendix are of great value; and the Supplementary Propositions will be found useful both to pupils and teachers."—*Athenæum*.

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"The propositions are demonstrated, in most instances, in the plainest and easiest manner; so that the work may justly claim (what it professes) to be a HELP TO TEACHERS."—*Scholastic Journal*.

In fcap. 8vo. price 1s. 6d.
COOLEY'S FIGURES of EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations printed separately for Use in the Classroom.
Whittaker & Co. Ave. Maria-lane, London.

ARNOLD'S ELEMENTARY ENGLISH GRAMMAR. In 12mo. price 3s. 6d.

HENRY'S ENGLISH GRAMMAR: a Manual for BEGINNERS.

By the Rev. THOMAS KEICHEYER ARNOLD, M.A. Late Rector of London, and formerly Fellow of Trinity College, Cambridge.

"An English Grammar for Beginners has hitherto been a desideratum in our literature; but Mr. Arnold now appears to have filled the gap. We may be permitted to doubt whether, amongst all his productions, characterized by elegant scholarship and sound criticism, any can be found more useful or more honourable to the clear judgment and conscientious industry of the author."—*Morning Post*.

Rivingtons, Waterloo-place.

Of whom may be had, by the Same Author,

1. **An ENGLISH GRAMMAR for CLASSICAL SCHOOLS,** being a PRACTICAL INTRODUCTION to ENGLISH PROSE COMPOSITION. Fifth Edition. 4s. 6d.

2. **SPELLING turned ETYMOLOGY.** 2s. 6d.

3. **LATIN viâ ENGLISH.** A Second Part of Spelling turned Etymology. 4s. 6d.

MR. ARNOLD'S ELEMENTARY LATIN BOOKS.

In 12mo. price 3s. A New Edition of

HENRY'S FIRST LATIN BOOK.

The object of this Work (which is founded on the principles of imitation and frequent repetition) is to enable the pupil to do exercises from the first day of his beginning his Accidence. It is recommended by the Oxford Diocesan Board of Education as an useful Work for Middle or Commercial Schools; and adopted at the National Society's Training College at Chelsea.

By THOMAS KEIGHTLEY, A.B. and M.A.
Late Rector of Lyndon, and formerly Fellow of Trinity College, Cambridge.

Rivingtons, Waterloo-place; and Simpkin, Marshall & Co.

Also, by the same Author,

1. A SECOND LATIN BOOK and PRACTICAL GRAMMAR. Intended as a Sequel to 'Henry's First Latin Book.' Sixth Edition. 4s.

2. A FIRST VERSE BOOK; being an Easy Introduction to the Mechanism of the Latin Hexameter and Pentameter. Fifth Edition. 2s.

3. ERUVIN: ESSAYS on Subjects connected with the NATURE, HISTORY, and DESTINY of MAN. Second Edition. 5s.

CORRECTED, AMENDED, and ENLARGED FOR THE ENGLISH STUDENT.

Now ready, a New Edition, carefully Corrected and Revised, in 2 vols. 8vo. price 24s. cloth, of

FLÜGEL'S COMPLETE DICTIONARY of the GERMAN and ENGLISH LANGUAGES: adapted to the English Student. With great Additions and Improvements, by C. A. FEILING, German Master at the Royal Military Academy, Woolwich, and the City of London School; Dr. A. HEIDMANN, Professor of the MSS. at the London University College; and JOHN OXFORD, Esq.

It is very desirable that parties wishing to have this work should be particular in specifying the New London Edition, as there are two other Editions bearing the name of Flügel; the one more bulky and much dearer, the other smaller and somewhat cheaper, though both are greatly inferior in utility for the English student, having been compiled without English assistance, and for the use, especially, of German students. An explanatory description of the difference between the various Editions will be found in the Preface to the New London Edition, which may be had, gratis, in a separate form, by application to either of the Publishers.

Also, just published, New and Cheaper Edition,

An ABRIDGMENT of the SAME, for Younger Students, Travellers, &c. By J. OXFORD and C. A. FEILING. Royal 18mo. price 7s. 6d. strongly bound.

London: Whittaker & Co., Dulau & Co.; and D. Nutt.

These works are used at the chief public schools, and by the tutors at the Universities, and are admirably adapted for private and self-instruction.

Whittaker & Co. Ave Maria-lane.

HUTTON'S MATHEMATICAL WORKS, BY DAVIES.

HUTTON'S MATHEMATICAL TABLES.
Royal 8vo. Twelfth Edition, 12s. cloth.

Also, recently published, by the same Proprietors, New Editions of

HUTTON'S COURSE of MATHEMATICS, completely revised by Mr. T. S. DAVIES, of the Royal Military College. Twelfth Edition. 2 vols. demy 8vo. price 12s. each, boards.

DAVIES'S SOLUTIONS of the PRINCIPAL of HUTTON'S MATHEMATICS. In 8vo. 14. 4s. boards.

London: Longman & Co.; Hamilton & Co.; Whittaker & Co.; Simpkin & Co.; F. & J. Rivington; Allen & Co.; C. H. Law; Cowie & Co.; Capes & Co.; H. G. Bohn; Smith, Elder & Co.; Houlston & Stoneman; T. Bumpus; J. Green; and J. Cornish. Cambridge: Deighton & Co.

THE AUTHOR'S EDITIONS.

OLLENDORFF'S METHOD of LEARNING to READ, WRITE, and SPEAK a LANGUAGE in SIX MONTHS.

1. ADAPTED to the GERMAN. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. In Two Parts. Part I. Seventh Edition, price 12s. 8vo. cloth. Part II. Third Edition, price 12s. 8vo. cloth. The Parts sold separately.

*** Introductory Book to Dr. Olendorff's Method adapted to the German, containing a New System of facilitating the Study of the German Declensions, and Rules on the Gender of Substantives. 8vo. cloth, 5s.

2. ADAPTED to the FRENCH. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Fifth Edition, containing a Treatise on the Gender of French Substantives, and an additional Treatise on the French Verbs. Price 12s. cloth.

3. ADAPTED to the ITALIAN. Written expressly for the English Student. By Dr. H. G. OLLENDORFF. 8vo. Third Edition, price 12s. cloth.

KEYS to the ITALIAN, FRENCH, and GERMAN SYSTEMS, prepared by the Author. Price 7s. each, cloth lettered.

It is necessary for those who desire to avail themselves of the present method to notice that these are the only English Editions sanctioned by Dr. Olendorff, and he deems any other totally inadequate for the purpose of English instruction, and for the elucidation of the methods so strongly recommended by Captain Bosc Hall and other eminent writers. They should be ordered with the Publishers' name; and, to prevent errors, every copy has its number and the Author's signature.

The above works are copyright.

London: Whittaker & Co. and Dulau & Co.; and to be had of any Bookseller.

NEW ITALIAN DICTIONARY.

This day is published, in 2 vols. 8vo. (1662 pp. 1. price 30s. cloth, 2. price 30s. cloth.)

A NEW DICTIONARY of the ITALIAN and ENGLISH LANGUAGES: based upon that of BARETTI, and containing, among other additions and improvements, numerous Neologisms relating to the Arts and Sciences; a variety of the most approved Idiomatic and Popular Phrases, &c. Compiled by JOHN DAVENPORT and GUGLIELMO COMELATI.

London: Longman & Co.; Whittaker & Co.; Dulau & Co.; and other Proprietors.

MR. LONG'S NEW CLASSICAL ATLAS.

Now ready, in 8vo. price 12s. 6d. half bound.

A NEW ATLAS of CLASSICAL GEOGRAPHY; containing Twenty-four Maps. Constructed by W. HUGHES, F.R.S.; and Edited by GEORGE LONG, M.A. With an Index of Places.

Also, in 8vo. price 5s. cloth.

A GRAMMAR SCHOOL ATLAS of CLASSICAL GEOGRAPHY; containing Ten Maps selected from the Larger Atlas. Constructed by W. HUGHES; and Edited by GEORGE LONG.

London: Whittaker & Co.; and George Bell.

X-YLO-IODIDE of SILVER, exclusively used at all the Photographic Establishments.—The superiority of this preparation is now universally acknowledged. Testimonials from the best Photographers and principal scientific men of the day, warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action. In all cases where a quantity is required, the two solutions may be had at Wholesale prices in separate Bottles, in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to counterfeit which is felony.

CYANOGEN SOAP, for REMOVING all kinds of PHOTOGRAPHIC STAINS. The genuine is made only by the inventor, and is secured with a red label bearing this signature and address, RICHARD W. THOMAS, CHEMIST, 10, PALL MALL, Manufacturer of pure Photographic Chemicals; and may be procured of all respectable Chemists, in Pots, at 1s., 2s., and 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-yard; and Messrs. Barclay & Co. 95, Farringdon-street, Wholesale Agents.

COLLODION PORTRAITS and VIEWS, obtained with the greatest ease and certainty, by using BLAND & LONG'S preparation of SOLUBLE COTTON. Certainty of uniformity of action over a lengthened period, combined with the most faithful rendering of the half-tones, constitute this a most valuable agent in the hands of the Photographer.

Albumenized Paper, for printing from glass and paper negatives, 6s. 5s. per ream.

THE PNEUMATIC PLATE-HOLDER for Collodion Plates. Waxed and Iodized Papers of tried quality. Instruction in the processes.

BLAND & LONG, Opticians and Photographical Instrument Makers, and Operative Chemists, 133, Fleet-street, London.

*** Catalogues sent on application.

PHOTOGRAPHIC CAMERAS of EVERY DESCRIPTION can be HAD AT OTTEWILL & MORGAN'S MANUFACTORY, 24 and 25, Charlotte-terrace, Caledonian-road, Islington.—OTTEWILL'S REGISTERED DOUBLE-BODY FOLDING CAMERA, adapted for Landscapes or Portraits, may be had of A. Ross, Featherstone-buildings, Holborn, Photographic Institution, Bond-street, and at the Manufactory above; where every description of Cameras, Slides, and Tripods may be had.—The Trade supplied.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

THE IODIZED COLLODION, manufactured by J. B. HOCKIN & CO. 289, STRAND, LONDON, still remains unrivalled for *sensitiveness and density of Negative—it exceeds all others in its keeping qualities and uniformity of constitution.*—Albumenized Paper, 17½ by 11, 5s. per quire; Waxed ditto, 7s., of very superior quality.—Double Achromatic Lenses, *equal in all points to those of any other manufacturer:* Quarter Plate, 2l. 2s.; Half Plate, 3l. 5s.; Whole, 4l. 10s.—Apparatus and pure Chemicals of all descriptions.

Just published, "PRACTICAL HINTS on PHOTOGRAPHY," by J. B. HOCKIN. 3rd edition, price 1s.; per post, 1s. 4d.

BANK OF DEPOSIT, NATIONAL ASSURANCE and INVESTMENT ASSOCIATION, No. 3, PALL MALL EAST, LONDON. Established A.D. 1841.

Empowered by Special Act of Parliament.

Parties desirous of INVESTING MONEY are requested to examine the plan of this Institution, by which a high rate of interest may be obtained with perfect security.

The Interest is payable in January and July at the Head Office in London; and may also be received at the various Branches, or through country bankers, without delay or expense.

PETER MORRISON, Managing Director.

Prospectuses and Forms for opening Accounts sent free on application.

LOANS, from 25l. to 1,000l., upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding 50 months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASS.—Prospectuses, Reports, and every information, may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each copy; or 1s. per post.

CHARLES JAMES THICKE, Resident Secretary.

COVENT-GARDEN LOAN OFFICE.

MONEY ADVANCED from 6l. to 100l. on Personal Security by the COVENT-GARDEN LOAN OFFICE, 17, Broad-court, Bow-street. The diffidence which tradesmen feel in applying to loan offices for temporary assistance, is avoided (the transaction being private); and the management being in one person, whose business habits for punctuality, secrecy, and despatch, qualify him for inquiry without the parade so common with some offices, which has secured to this Office public confidence.

*** Approved Bills discounted.

GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE IS HEREBY GIVEN, that a CALL of 2l. 10s. per Share, on each and every share of the "G.T.R." series of the shares of this Company, has been made, and will be due and payable on SATURDAY the 10th day of FEBRUARY, 1855.

A Call of 10l. will also be due and payable on each of the Certificates exchangeable for Company's Debentures, and 10l. on each of the Certificates exchangeable for Debentures of the Province of Canada—Six per cent. interest will be charged on the Calls so long as they remain in arrear.

A Call letter will be sent to each Shareholder for the payment of the Call on his shares. The Debenture Certificates must be presented at the Bankers, in order that the payment of the Call may be marked upon them.

Holders have the option of paying up in full on their Shares and Debentures.

Interest at the rate of 6 per cent. per annum is paid on all sums received in advance of Calls, on either Shares or Debentures.

All payments to be made at the Banking-house of Messrs. Glyn, Mills & Co. 67, Lombard-street.

By order of the Board,
WILLIAM CHAPMAN, Secretary.

Offices of the Company, 21, Old Broad-street,

INSTITUTED 1831.

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.
Head Office—EDINBURGH, 26, St. Andrew-square.
LONDON—126, Bishopsgate-street, Cornhill.

The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is
an Institution peculiarly adapted to afford provision for Families.
It was established in the year 1831, upon the principle of
MUTUAL CONTRIBUTION, the Surplus or Profit being wholly
divisible among the Members; and the Additions which have
been made to Policies at Periodical Investigations of the
Society afford satisfactory evidence of the prosperity of the Insti-
tution, and the great advantages derived by its Members. The
following Examples exhibit the Additions already made:—

A Policy for 1,000*l.*, opened in 1832, is now increased to 1,522*l.* 8*s.*
A Policy for 1,000*l.*, opened in 1836, is now increased to 1,421*l.*
16*s.* 10*d.*

A Policy for 1,000*l.*, opened in 1840, is now increased to 1,310*l.*
12*s.* 7*d.*

The Profits are ascertained, and divided triennially among
Policies of more than five years' duration.

The Annual Revenue is upwards of 150,000*l.*
The Amount of Assurances in force is upwards of Four Millions
and a Quarter sterling.

The Amount paid to the Representatives of Deceased Members
exceeds 600,000*l.* sterling.

The Total Amount of Vested Additions allocated to Policies
exceeds 600,000*l.*

The Accumulated Fund is upwards of 830,000*l.*
Loans granted to Members to the extent of the office value of
their Policies.

Copies of the Annual Report, Forms of Proposal and all infor-
mation, may be had on application at any of the Society's Offices
in Town or Country.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.

FINE-ART MANUFACTURE.—ELKINGTON

& Co. respectfully solicit the attention of the Nobility,
Gentry, Amateurs, Artists, and others interested in the advance-
ment of British Art-Manufacture, to their increasing Collections
of Statuettes, Vases, &c. published exclusively by them in Bronze,
Silver, and Gold, from the Antique and select Works of Modern
Artists.

Also to their Artistic and Decorative Plate, calculated for the
Table, Sideboard, Library, Boudoir, &c.

These productions were honoured at the late Great Exhibition
by an award of the 'Council Medal,' and may be obtained at either
of the Establishments—

25, REGENT-STREET, LONDON.
45, MARKLATE-STREET,
NEWHALL-STREET, BIRMINGHAM.

ARTIFICIAL TEETH of the best, cheapest,

and most durable description. Manufactured and adapted
solely by MR. THOS. LUKYN, with guaranteed success, on his
improved French mode of mechanical construction. Read Lukyn's
'Essay on the Teeth,' with illustrations, crown 8*v.* 2*s.* 6*d.*, by
post, 3*s.* 4*d.*, Upper George-street, Bryanston-square.

PAINLESS TOOTH EXTRACTION, with-

out Chloroform.—MR. WALTER BLUNDELL is at home
daily, from Ten till Four, for Dental Operations under his new
patent process.—20, New Broad-street, City.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52,
FLEET-STREET, has introduced an ENTIRELY NEW
DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs,
wires, or ligatures. They so perfectly resemble the natural teeth
as not to be distinguished from the originals by the closest ob-
server; they will never change colour or decay, and will be found
superior to any teeth ever before used. This method does not re-
quire the extraction of roots, or any painful operation, and will
support and preserve teeth that are loose, and is guaranteed to
restore articulation and mastication. Decayed teeth rendered
sound and useful in mastication.
52, FLEET-STREET.—At home from Ten till Five.

CONSTANT EMPLOYMENT GUARAN-

TEED.—Ladies or Gentlemen are introduced in the New,
Elegant, Permanent Arts of ENGRAVING, GILDING, and DECORA-
TION, for articles of general use. "THE ARTS TAUGHT" for
One Guinea each, and constant employment "GUARANTEED,"
by which from 2*l.* to 3*l.* may be realized weekly. Ladies wishing to
increase their income cannot pursue a more elegant, artistic, or
pleasurable occupation. Private Lessons given at Ladies' own re-
sidences. MR. LAWRENCE, who is an exhibitor at the Stationery
Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites
Ladies to see his unique specimens at the above public buildings,
or at Mr. L's Show Rooms daily, from Ten till Five, 15, Percy-
street, Bedford-square, near Rathbone-place. The Arts taught by
correspondence.

CONTINUOUS EMPLOYMENT GUARAN-

TEED.—A limited number of LADIES WANTED IMME-
DIATELY, to pursue the Fashionable and Lucrative Arts of
"ILLUSTRATING OR VILLAGE" and "LITHOGRAPHING,"
for objects at the Crystal Palace, intended for publication. Each
Art is taught for One Guinea, either personally or by correspon-
dence, and by which a handsome income can be realized weekly.—
Continuous employment guaranteed at the pupil's residence and
private occupation.—The elegant specimens are on view daily at
Mons. LAURENT'S residence, 14, Torrington-square, near
Russell-square; Royal Polytechnic, &c.—References to families of
distinction. No knowledge of drawing necessary.

CARRIAGES of the lightest Construction, best

build and finish, at reduced prices.—For SALE, or to be Let
on Job, a large assortment of New and Second-hand CARRIAGES,
comprising single and double seated Broughams, Clarendons, Steeple-
piece Broughams, Piletops, Phaetons, &c.—PRAKE'S old-es-
tablished Carriage Factory, 5, Lisle, or 11, Princes-street, Leicester-
square.

TO SPORTING GENTLEMEN, Commercial

Travelers, and all who appreciate a good light when driving.
—J. MOORE begs to call the attention of the above to his long-
tried and much-appreciated GIG DASH-BOARD LAMP, as also
every description of Carriage Lamp of the newest and most ap-
proved style, warranted of the best materials and workmanship.
To be had at the Manufactory, established 1820, 1, Cross-street,
Sutton-street, Clerkenwell. J. M. feels confidence in recom-
mending the above articles, as they have been upwards of 25 years before
the public notwithstanding the numerous attempts at imitation.
They are made either for oil or candle, and to suit every descrip-
tion of carriage.

CAMP LANTERNS for the CRIMEA, com-

bining every recent improvement, adapted for burning the
Patent Fusee Candles, which can be instantly ignited as a lucifer.
These Lanterns are equally suitable for war-houses and other
Places, each Fusee Camp Candle, is 3*d.* per box. Sold by all
Lamp Dealers; by S. CLARKE, 55, Albany-street, Regent's Park;
and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES,

can be instantly ignited as a lucifer, are of different lengths,
adapted for journeys of two, three, or four hours, and of two
thicknesses to fit all lamps.—Sold in Boxes, at 1*s.* 3*d.* per box, by
all Grocers, Candle-Dealers, and Chemists; and wholesale by
PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made

so that they can be instantly affixed to the Dashboard of any
Gig, Drag, or other description of Vehicle, and can be as quickly
removed and used for a Hand-Lantern in the stable. They are
adapted for burning the new Patent Fusee Carriage Candle. The
appearance and effect are equal to that of a carriage lamp of superi-
or finish, but the price being less than half, these lamps are
placed within the reach of every person requiring a light when
driving.—Price 12*s.* 6*d.* each, at any of the Lamp-Dealers; and
wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by
the Patentees, S. CLARKE, 55, Albany-street, Regent's Park
London.

MODERATOR LAMPS.—IMPROVED

PRINCIPLE.—For simplicity, strength and general
finish, the LAMPS sold by THOMAS PEARCE & SON are
far superior to any other kind. They are all made expressly
for the purpose, and are tried before they leave the Manufactory,
and have important improvements peculiar to only these Lamps.
The patterns are singularly uncommon and beautiful, and for
art, elegance and good taste, the assortment is quite unexcelled.
Many of the designs belonging exclusively to T. PEARCE
& SON.

Direct Importers of Oil of the finest quality.
T. PEARCE & SON, 23, Ludgate-hill.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S PLACE.

RUPTURES.—BY ROYAL LETTERS PATENT. WHITE'S MOC-MAIN-LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft and elastic band, which follows the body of the patient, and power is supplied by the MOC-MAIN PAD and PATENT LEVER fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer, Mr. W. WHITE, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c. For VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price, from 7s. 6d. to 10s. each. — posted 6d. MANUFACTORY, 228, PICCADILLY, LONDON.

INFANTS' NEW FEEDING BOTTLES.—From the *Lancet*:—"We have seldom seen anything so beautiful as the nursing bottles introduced by Mr. Elam, of Oxford-street. They are adapted to milk, biscuits, and all kinds of food; and, whether for weaning, rearing by hand, or occasional feeding, are quite unrivalled."—BENJAMIN ELAM, 196, Oxford-street. 7s. 6d. The bottle and mouthpiece are stamped with my name and address.

KNOW THYSELF!—Professor BLENKINSOP continues to receive from individuals of every rank the most flattering testimonials of his success in describing the CHARACTERS of Persons from their HANDWRITING, pointing out their mental and moral qualities, whether good or bad.—Address by letter, stating age, sex, and occupation, enclosing 13 uncut postage stamps, to Dr. Blenkinsop, 344, Strand, London.

KNOW THYSELF! The secret art of DISCOVERING the TRUE CHARACTER of INDIVIDUALS from the peculiarities of their HANDWRITING, has long been practised by Miss GRAHAM with astonishing success. Her startling delineations are both full and detailed, differing from anything hitherto attempted. All persons wishing to "know themselves," or any friend in whom they are interested, must send a specimen of their writing, stating sex and age, in enclosing 13 penny post stamps to Miss Graham, 10, CHICHESTER PLACE, KING'S CROSS, LONDON, and they will receive in a few days a minute detail of the mental and moral qualities, talents, tastes, affections, virtues, failings, &c., of the writer, with many other things hitherto undetected.

"Miss Graham is a most successful graphologist." *Family Herald*.

DECAYED TEETH and TOOTH-ACHE.—Patronized by Her Majesty the Queen, and H.R.H. Prince Albert.—Mr. HOWARD'S PATENT WHITE SUCCEDANEUM for filling decayed teeth, however large the cavity. It is placed in the tooth in a soft state, without any pressure or pain, and in a short time becomes as hard as the enamel, lasting many years.—Sold by Savory, 220, Regent-street; Sanger, 150, and Hannay, 63, Oxford-street; BUNCE & Co., 4, Chancery-lane; 68, Cornhill; and all Chemists and Medicine Vendors in the kingdom. Price 2s. 6d. with full directions for use inclosed.

METCALFE & CO'S NEW PATTERN TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose, &c. An improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the softest and most elastic Russian bristles. Elastic Brushes of improved durable unbleached Russian bristles. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, 10, CHICHESTER PLACE, KING'S CROSS, LONDON, and by all respectable Chemists and Medicine Vendors in the kingdom. Price 2s. 6d. with full directions for use inclosed.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL.

PREPARED FOR MEDICINAL USE IN THE LOFFODEN ISLES, NORWAY, AND PUT TO THE TEST OF CHEMICAL ANALYSIS. PRESCRIBED BY EMINENT MEDICAL MEN AS THE MOST EFFECTUAL REMEDY FOR CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, SOME DISEASES OF THE SKIN, RICKETS, INFANTINE WASTING, GENERAL DEBILITY, AND ALL SCROFULOUS AFFECTIONS—effecting a cure or alleviating suffering much more rapidly than any other kind.

PURE AND UNADULTERATED.

TESTIMONIAL FROM ARTHUR H. HASSALL, M.D. F.L.S. Member of the Royal College of Physicians, Physician to the Royal Free Hospital, Author of 'Food and its Adulterations,' &c. &c.

"Dear Sir,—I beg to return my acknowledgments for the copy of your Work on Cod Liver Oil, with which you have favoured me. I was already acquainted with it, and had perused it some time previously with considerable gratification, especially the chapter devoted to the consideration of the adulteration of Cod Liver Oil.

"I have paid, as you are aware, much attention to the subject of the adulteration of drugs. Amongst the articles examined, I have not overlooked one so important as Cod Liver Oil, and this more particularly, since it is a very favourite remedy with me, and is, moreover, so liable to deterioration by admixture with other, especially inferior Fish Oils. I may state that I have more than once, at different times, subjected your Light Brown Oil to chemical analysis, and this unknown to yourself, and I have always found it to be free from all impurity, and rich in the constituents of bile.

"So great is my confidence in the article, that I usually prescribe it in preference to any other, in order to make sure of obtaining the remedy in its purest and best condition.

"I remain, yours faithfully, (Signed) ARTHUR H. HASSALL, M.D. Bennett-street, St. James's-street, "1st December, 1854."

"To Dr. De Jongh, the Hague."

SOLD IN LONDON by ANSAR, HARFORD, & CO., 77, STRAND. Dr. De Jongh's sole accredited Consignees and Agents for the United Kingdom and the British Possessions, and sent by them, CARRIAGE FREE, to all parts of town.

May be obtained in the Country, from respectable Chemists and Vendors of Medicine. Should any difficulty be experienced in procuring the Oil, Messrs. ANSAR, HARFORD, & Co. will forward four half-pint bottles to any part of England, CARRIAGE PAID, on receipt of a remittance of 10s.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 8s.—IMPERIAL MEASURE.

CAUTION.—The bottles are labelled with Dr. De Jongh's stamp and signature, without which none are genuine. The Public are especially cautioned against frequent attempts to induce them to purchase other kinds of Cod Liver Oil, under the pretence that they are the same as Dr. De Jongh's, or equally efficacious.

VIOLETS.

H. BREIDENBACH, Distiller of Flowers of Eau de Cologne to the Queen, has now in great perfection several EXTRACTS of that favourite flower the WOOD VIOLET. It has a lasting odour, and will not stain the handkerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant.

137 n, New Bond-street, facing Redmayne's.

DECORATION OF THE HEAD.—The admi-

nable taste displayed in the *Head Dresses* of some of our leading belles, who are no less indebted to art than to nature for their superiority, may be imitated, but never equalled, without the aid of the hair upon the head. The indispensable requisite is a GOOD HEAD OF HAIR. This, the skilful artist may embellish; but the lank, weak, and thinly-scattered locks he laboriously and vainly attempts to arrange in a manner befitting the requirements of the fashionable circles. For this, the Hair must be nourished and invigorated, and all relaxing tendencies overcome. *Oldridge's Balm of Cod-liver* is the only prepared and truly efficacious, without being in the slightest degree injurious.

By its frequent use the Hair is prevented from turning grey, is improved in appearance, strengthened, and receives, by frequent application, that beautiful gloss and luxuriance which so greatly adds to the grace and dignity of the human form.

Price 3s. 6d., 6s., and 11s. per Bottle; no other prices are genuine.

Ask for OLDRIDGE'S BALM, 13, Wellington-street North, Strand, London.

Sold by all respectable Chemists, Perfumers and Stationers.

DO YOU WANT BEAUTIFUL HAIR,

WHISKERS, &c. 7-If so, use PALM-PILLA, declared by thousands of testimonials to be magical in its effects. In all cases of baldness it is a certain remedy, causing a thick and luxuriant growth, strengthening weak hair, preventing its falling off, and checking greyness in all its stages. For the production of Whiskers and Moustaches in two or three weeks, it has never been known to fail. Price 2s., sent post free (anywhere) on receipt of 24 penny postage stamps by Miss ALICE MELVILLE, 25, Argyle-square, London.—"I was quite bald, but have now a good head of hair." *Wm. Hopton*.—"My whiskers are growing very thick." *R. Mede, Esq.*—"It restored my hair, which I had lost in patches." *W. Short*.—"It has quite checked the greyness." *Miss Ellis*.—"My moustache is greatly improved." *Capt. Ross*.

DO YOU WANT LUXURIANT HAIR,

WHISKERS, &c.—No other compound for the Hair has maintained such an enduring celebrity as EMILY DEAN'S CRINILENE. It is guaranteed to produce Whiskers, Moustaches, Eyebrows, &c. in a few weeks, and restore the Hair in baldness, from whatever cause, strengthen it when weak, prevent its falling off, and effectually check greyness in all its stages. For the nursery, Dr. Wilson says, it is unrivalled.—Price 2s. per Package (elegantly perfumed); sent post free on receipt of 24 penny postage stamps, by MISS DEAN, 37A, Manchester-street, Gray's Inn-road, London. Sold by every Chemist in the Kingdom. "In one fortnight I had a beautiful set of moustaches." *H. Adams*.—"It has prevented my hair falling off." *Hickson*.—"It has quite checked the greyness that was coming on." *Mrs. Elder*.

BEAUTIFUL HAIR, WHISKERS, &c., are INVARIABLY PRODUCED IN TWO OR THREE WEEKS by COUPELLE'S CELEBRATED CRINUTRIAR, which is universally acknowledged as the only preparation to be really depended upon for the unfailling production of Hair, as also for checking Greyness, Baldness, &c., and rendering the Hair luxuriant, curly, and elastic.—*Mr. Williams*, *London-street, Liverpool*.—"I can now show as fine a head of hair as any person, solely from using your Crinutriar."—*Benjamin Crowen, Longford Barracks, Ireland*.—"Through using your Crinutriar, I have an excellent Moustache, which I had before despaired of."—*Mrs. Carter, Pangbourne, Bucks*.—"I have used your Crinutriar, and it has increased my hair."—Price 2s. per packet, through all Chemists and Perfumers; or sent post free for 24 penny stamps, by ROSALIE COUPELLE, 69, Castle-street, Newman-street, Oxford-street, London.—Guard against imitations under closely similar names. Twenty pages of Testimonials, with list of Country Agents, post free for two stamps.

TO PARENTS AND GUARDIANS.

THE return of Youth to the respective Boarding-schools induces a solitude for their Personal Comfort and Attraction. Now it is that

ROWLANDS' MACASSAR OIL,

for accelerating the growth and for improving and beautifying the hair,

ROWLANDS' KALYDOR,

for improving the Skin and Complexion, and removing Cutaneous Eruptions, and

ROWLANDS' ODONTO,

or PEARL DENTIFRICE, for rendering the Teeth beautifully white and preserving the Gums, are considered indispensable accompaniments for the attainment of those Personal Advantages so universally sought for and admired.

Sold by A. ROWLAND & SONS, 20, Hatton-garden, London; and by Chemists and Perfumers.

BEWARE OF SPURIOUS IMITATIONS.

NERVES.—DR. GRANDISON'S PILLS for

strengthening the Nerves are sold in London by Mr. RICHARDS, 40, New Bridge-street; Mr. SANGER, 150, Oxford-street; and other respectable Chemists.—Boxes can be sent by post. Price 1s. 10d., 2s. 9d., and 4s. 6d. each.

RUPTURES EFFECTUALLY CURED

WITHOUT A TRUSS!—All sufferers from this alarming complaint are earnestly invited to consult or write to Dr. LESLIE, as he guarantees them relief in every case. His remedy has been successful in curing thousands of persons during the last twelve years, and is applicable to every kind of single and double Rupture, however bad or long-standing, in male or female of any age, causing no confinement or inconvenience in House whatever. Sent post free to any part of the world, with full instructions for use, on receipt of 7s. 6d. in postage stamps, cash, or post-office order, payable at the General Post-office, to Dr. Herbert Leslie, 37A, Manchester-street, Gray's Inn-road, London.—At home daily (except Sunday) from 11 till 3 o'clock. A Pamphlet of Testimonials sent post free on receipt of one postage stamp.

DEAFNESS and NOISES in the HEAD.—

Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. Instant and permanent restoration of hearing guaranteed, without the use of ear-trumpets, instruments, or causing one moment's inconvenience to the most aged or nervous sufferer. Dr. HOGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and magically removes all singing in the ears. Hospital and private testimonials and certificates from the most eminent Physicians and Surgeons in England, in whose presence persons have been cured, and many hundreds of private patients cured can be seen or referred to. Hours of consultation, 11 till 4 every day. Francis Robert Houghton, Member of the London Royal College of Surgeons, May 2, 1846; Licentiate of the Apothecaries Company, April 30, 1846.

Just published.

"SELF-CURE OF DEAFNESS," for country patients; a stop to empiricism, quackery, and exorbitant fees, sent on receipt of seven stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

DR. BARRY'S HEALTH RESTORING

REVALENTA ARABICA FOOD counteracts Dyspepsia (Indigestion), Constipation and their consequences.—Andrew Ure, M.D. F.R.S. London. These consequences are Nervous, Bilious and Liver Complaints, Acidity, Heartburn, Flatulency, Sick Headaches and General Debility Low Spirits, Cough, Asthma, Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges or causes the least sickness, and it is the most agreeable with a moderate liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. Highly approved of by Drs. Ure, Shorland, Harvey, Campbell, Gattickier, Wurzer, Lord Stuart de Decies, and 50,000 other respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.

In canisters, 1lb. 2s. 9d.; 2lb. 4s. 6d.; 5lb. 11s.; 12lb. 22s.; super-refined, 1lb. 6s.; 2lb. 11s.; 5lb. 22s.; 10lb. 33s. The 10lb. and 12lb. carriage free on receipt of Post-office order. Barry Du Barry & Co., 77, Regent-street, London; Fortnum, Mason & Co., Purveyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street; 330 and 451, Strand; 4, Chancery-lane; 68, Cornhill; 49, Bishopsgate-street; 55, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

STUDENTS, TEACHERS, CLERGYMEN,

LITERARY MEN and others, whose care and most anxious thought is constantly being called forth, can hope for but little pleasure in their high and important undertakings, unless seconded by a proper buoyancy of spirit and vigour of mind. To secure this, then, it becomes the first consideration of every thoughtful individual; and the fine balsamic preparation, PARKES'S LIFE PILLS, of all diseases, is withal the most appropriate and calculated to produce a fine flow of animal spirits, a clear head, and a ready perception.

*** Ask for PARKES'S LIFE PILLS.

Sold by E. EDWARDS, 67, St. Paul's Churchyard; BARNARD & SONS, Farringdon-street; SUTTON & CO. Bow-churchyard; HANNAY & CO. 63, and SANGAR, 150, Oxford-street, London; and by all respectable Chemist and Medicine Vendors in Town and Country.

In Boxes, price 1s. 10d., 2s. 9d., and in Family Packets 11s. each.

HOLLOWAY'S PILLS, a prompt and certain

CURE for BILIOUS and LIVER COMPLAINTS.—Mrs. Mary Cook of Maylings Green, near Romford, has been suffering for some years from Bile, Sick Headache, and a severe Liver Complaint, for which she tried almost every mode of relief, but to no purpose. She then had recourse to Holloway's Pills, and so wonderful was the effect of this inestimable medicine, that in a very short time she was perfectly cured by their use, and now enjoys better health than ever. Mr. Yall, Druggist, Romford, can testify to the truth of this, and has sold by all respectable Chemists and Medicine Vendors in the Kingdom. Holloway's Establishment, 24, Strand, London, and 80, Maiden-lane, New York.

IMPORTANT TO AUTHORS.—NEW PUBLISHING ARRANGEMENTS.

HOPE & CO., PUBLISHERS,

16, GREAT MARLBOROUGH-STREET, LONDON,

CHARGE NO COMMISSION FOR PUBLISHING WORKS PRINTED BY THEM until the Author has been refunded his original outlay. They also print in the first style *greatly under the usual charges*; while their Publishing Arrangements enable them to promote the interest of all Works intrusted to their charge. Estimates and every particular furnished gratuitously in course of post.

HOPE & CO. HAVE JUST PUBLISHED:

1. **Mary Ellis; or, Life and its Mistakes.**

In 3 vols. post 8vo. 31s. 6d.

"Excellent both in its moral tone and in its literary style,—we commend 'Mary Ellis' as a safe and instructive novel." *Literary Gazette*.

"'Mary Ellis' is a better novel, critically speaking, and a more interesting one to the uncritical reader, than the majority of those which claim the patronage of the circulating libraries; and we can commend it to their shelves, where, if once admitted, and read by a few, it will rarely be found resting afterwards."—*Critic*.

2. **Alice Nugent; or, Seed for Coming Days.** Price 4s.

"A religious story, piously conceived, and prettily written." *Literary Gazette*.

3. **Edith Vernon; or, Contrast of Character.** In 2 vols. post 8vo.4. **The Young Ladies' First French BOOK;** with vocabularies of all the French and English Words therein. A Work from which even those who think they have acquired the French Language will derive important information. By R. ALIVA. Price 3s. 6d.

"A very useful introduction to French conversation, and indeed to the language generally."—*Athenæum*.

"Admirably adapted for the object in view."—*Morning Herald*.

"An excellent book to bring the pupil forward with ease to the teacher."—*The Press*.

"The author's plan displays considerable ability." *Lady's Newspaper*.

"The shortest and easiest way to reading, writing, and speaking French."—*Weekly Times*.

"The lessons are exceedingly well devised, and the exercises are of an attractive nature."—*Morning Advertiser*.

"Really a ladies' book, enabling the student to converse with fluency and write with ease and accuracy."—*Morning Chronicle*.

5. **The First Form Latin Grammar on ANALYTICAL PRINCIPLES.** By EDWARD BAINES, M.A., Rector of Blunfisham, Hants, and formerly Fellow and Senior Tutor of Christ's College, Cambridge. Price 1s.6. **Universal Parallel Chronology,** from the Creation to the Present Time; being a Complete Guide to the Study of History. Price 7s.7. **Just published, price 1s.**
Chapters for School Reading and HOME THOUGHTS: a Sequel to the Village School Reading Books. By the Author of 'The Village School-Mistress' Assistant.

"The author of this little volume appears animated by a sincere desire to impart lessons of pure morality and religion in a kindly and unaffected spirit. The 'Chapters' are admirably adapted for the cottage, and may be read with advantage in the hall. As a book for the school we can cordially recommend it."—*Morning Post*.

Also, by the same Author, dedicated by permission to the Dean of Manchester,

The Village School Reading-Book, price 10d., and the **VILLAGE SCHOOL-MISTRESS' ASSISTANT,** price 10d.

1. **Lays of Love and Heroism, Legends,** LYRICS, and other POEMS. By ELEANOR DARBY, Author of 'The Sweet South.' Price 7s. 6d.2. **The Sweet South; or, a Month at ALGIERS.** By ELEANOR DARBY. Price 4s.3. **Just published,**
Epullia. By the Author of 'Poems by MELANCTH.' Containing: The Fleet in the Black Sea—The Battle of the Alma—Lyrit Mohun, a Tale of Torlay—Lita of the Nile—Hero and Leander, &c. &c. Price 4s.4. **Poetical Romances and Ballads.** By R. VILLIERS SANKEY, Esq. Price 3s. 6d.5. **THE MILITARY ACHIEVEMENTS OF Field-Marshal the Duke of Wellington,** contrasted with those of ALEXANDER—PYRRHUS—HANNIBAL—CESAR—MARLBOROUGH—NAPOLEON, and other celebrated Military Commanders. By A. PENINSULAR AND WATERLOO OFFICER.

"The volumes will make an excellent text-book for young military men, to whom we cordially recommend them." *Naval and Military Gazette*.

"We recommend the perusal of this work to all officers." *British Army Despatch*.

"The volumes will form a useful addition to Regimental Libraries. As a whole, the book is a superior and valuable one. As such we wish it every success."—*United Service Magazine*.

6. **Second Edition, price 1s.; or post free, 1s. 2d.**
The Cholera in Berwick-street. By the SENIOR CURATE of ST. LUKE'S.

"A deadlier field than Alma."—*Daily News*.

"Heroism at home."—*Times*.

7. **Just published, price 5s.**
Sacred History, with a Compendium of ECCLESIASTICAL HISTORY, from the Death of Christ to the Reign of Constantine. Edited by the Rev. J. C. CHAMBERS, M.A.

"Well adapted as a text-book for instruction."—*Literary Gazette*.

"An opportune and valuable manual."—*Morning Advertiser*.

8. **Just published, price 7s. 6d.**
The Church of England and Erastianism SINCE THE REFORMATION. By the Rev. J. R. PRETYMAN, M.A., late Vicar of Aylesbury, Bucks.

"Great ability with much historical research, which render Mr. Pretyman's book both interesting and instructive."—*John Bull*.

"This book is at once curious and interesting, as well as important."—*Observer*.

"Marked by thought and ability."—*Guardian*.

"Much thought and considerable research. Clear and forcible statement."—*Morning Post*.

"We admire the ability with which he has stated his case, and the occasional force of his arguments."—*Critic*.

"Mr. Pretyman's book is written in exceedingly good temper; and, however we may differ from his conclusions, we cannot but acknowledge its calmness of tone and literary merit. It is quite exhaustive of the subject; and it is with pleasure that we recommend it to all who take an interest in such matters."—*Atlas*.

1. **In the Press,**
The Second Series of Practical Sermons. By G. W. BRAMELD, Vicar of East Markham, Notts.2. **A NEW WORK BY THE REV. HENRY CHRISTMAS.**
In 1 vol. post 8vo. price 10s. 6d.**Christian Politics.** By the Rev. Henry CHRISTMAS, M.A., Author of 'The Cradle of the Twin Giants,' 'Echoes of the Universe,' 'Shores and Islands of the Mediterranean,' &c.3. **Ready this day, Second Edition, much improved,** price 7s. 6d.**Thirty-four Practical Sermons.** By G. W. BRAMELD, M.A. Oxon., Vicar of East Markham, late Curate of Mansfield.

"Truly spiritual."—*John Bull*.

"Brief, earnest and forcible."—*English Churchman*.

"These discourses are truly what they are termed in the title-page—practical. Mr. Brameld does not command belief, he persuades and convinces."—*Critic*.

"Sound and impressive, simple, yet eloquent discourses." *Notts Guardian*.

"An able and excellent volume."—*Nottingham Mercury*.

4. **Price 7s. 6d.**
Thirty Sermons on Jonah, Amos, and HOSEA. By the Rev. W. DRAKE, M.A., Lecturer of St. John Baptist Church, Coventry; Hebrew Examiner in the University of London; and late Fellow of St. John's College, Cambridge.

"The sermons of Mr. Drake are an important contribution to the pulpit teaching of the day; for they deal with the portion of the prophecies on which they treat, as matters which seriously concern Christian hearers. Without any parade of learning, they yet display a consummate and critical knowledge of their subject; and great pains are taken that nothing be lost of their full meaning. They make a valuable commentary, as well as a volume of profitable sermons."—*Church of England Quarterly Review*.

5. **The Light which Lighteth every Man;** SERMONS by ALEXANDER R. RUSSELL, late Curate at Herstmonceux. Price 6s.

"The volume of Sermons by Mr. Russell is one of those rare appearances which command attention, and so far as our judgment extends, is worthy to be possessed by every clergyman. Moderate in tone, chaste in language, and replete with brilliant thoughts, alike explanatory of God's word, and testifying deep acquaintance with the human heart. 'The Light which Lighteth every Man' will well repay constant perusal."—*Clerical Journal*.

"We have been much pleased with these sermons, and can recommend them for family reading as among the very best we have lately met with."—*Press*.

6. **Just published, price 5s.**
The Glorious Gospel of the Blessed GOD: a Series of Parochial Lectures from Consecutive Portions of the Old and New Testaments. By the Rev. JOHN HAWKSWORTH, M.A., Perpetual Curate of Woore, Salop, and Incumbent of St. Leonard's District, attached thereto.7. **Regeneration; or, Divine and Human NATURE.** A Poem in Six Books. By GEORGE MARSLAND.8. **The Musings of a Spirit: a Poem.** By GEORGE MARSLAND.

ADVENT OF THE SECOND REFORMATION.

On TUESDAY, the 6th of FEBRUARY,

The Courier and Church Reform Gazette

(Now Published Fortnightly)

WILL BE PUBLISHED WEEKLY, PRICE 6d. STAMPED,

ADVOCATING THE GREAT PRINCIPLES OF A THOROUGH CHURCH REFORMATION, THE REFORM OF OUR SOCIAL LAWS, AND OPPOSITION TO THE PRINCIPLES OF POPERY AND INFIDELITY.

THE COURIER will equal any of the Metropolitan Journals in the ability of its editorial management and the extent and correctness of its general news. A Military Officer of great experience has undertaken the Military Editorship, so that its readers may depend on the correctness of the criticisms on the military department of the Government, and the movements at the Seat of War.

In the Ecclesiastical management, the Editors will be supported by some of the first Divines of the day. In each and all of the various departments of Journalism—Ecclesiastical, Political, Naval, Military, Literary, Legal, and Commercial—the Editorial management will be complete, so as to furnish to the friends of Church Reform a Journal worthy in every respect of the great cause in which it is embarked.

London: HOPE & CO. 16, Great Marlborough-street.

Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the county of Middlesex, at his printing-office No. 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in the said county; and published by JOHN FRANÇOIS, of No. 14, Wellington-street North, in the said county, Publisher, at No. 14 in Wellington-street aforesaid; and sold by all Booksellers and News-vendors.—Agents: for SCOTLAND, Messrs. Bell & Bradburn, Edinburgh;—for IRELAND, Mr. John Robertson, Dublin.—Saturday, January 20, 1855.

Journal of English and Foreign Literature, Science, and the Fine Arts.

LONDON, SATURDAY, JANUARY 27, 1855.

PRICE
FOURPENCE
Stamped Edition, 5d

occupies a high rank among establishments of a similar class in France. Prospective pupils may be had of M. Wedlake & Co., 118, Fenchurch-street, City. The terms are 40*l.* per annum, without any board, and 10*l.* for the books. The scholars are bound to reside in the house of the year, and are only chargeable from the day of their arrival at the College. Steel in the highest style of ART, TO BE DISPOSED OF. Size of
the Plates, 20 inches by 17½. These are particularly adapted for an
Art Union Distribution, the subjects being purely English.—For
particulars apply, by letter, to Mr. BROOKER, Printer, No. 29
Castle-street, Oxford-street.

BEDFORD CHARITY COMMERCIAL SCHOOL.—WANTED TWO ADDITIONAL ASSISTANT MASTERS, competent to teach English generally and the rudiments of the Latin Language.—Salaries to commence at £60. per annum. Applications and Testimonials to be addressed to George Hurst, Esq., Chairman of the Board of Trustees, on or before Tuesday, February 14th, and due notice will be given to the Gentlemen selected for Examination, as to the day when their presence will be requested. By order of the Board, GEORGE HURST, Chairman.

The Schools, Bedford, Jan. 24th, 1855.

A MARRIED MEDICAL MAN, retired from Practice, and residing in a Healthy Village in Surrey, within an hour's distance from Town by Railway, and Ten minutes' walk from a Station, RECEIVES a single INVALID PATIENT. For terms, address, and references, apply to Mr. Newby, Publisher, 39, Welbeck-street, Cavendish-square.

BRIGHTON.—A HOME for INVALID and ORPHAN CHILDREN of the HIGHER CLASSES, in a superior mansion, in the most delightful and healthy part of Brighton. Only a limited number taken, and from the age of one month to twelve years. A Governess, Nurses, and every suitable accommodation. References permitted to several eminent medical men and clergymen.—Address to A. C. L., care of Mr. Wallis, 5, Bartholomews, Brighton.

TORQUAY.—The Wife of a Clergyman residing at Torquay will be happy to undertake the CHARGE of a FEW CHILDREN whose parents desire for them a mild climate and a comfortable home. All that is essential to a good education will be taught as far as is compatible with the health of the children.—Address, D. D. Mr. Cockrem, Bookseller, Torquay.

MISS STABBACH has the honour to announce her return from the Continent, to RESUME HER ENGAGEMENTS. Communications to be addressed "MISS STABBACH, 11, Edgeware-road, Hyde Park."

MRS. WELLER, formerly of Bath Villa School, Cheltenham, begs to announce that she continues to give INSTRUCTION in MUSIC, either in London or her own neighbourhood.—St. Aubyn Cottage, Putney, January, 1855.

SINGING.—A LADY, who has had twelve years' experience in private and school teaching, and who can sing the highest and lowest notes to make arrangements with a high-class Ladies' School after the recess. She can also receive a few PUPILS at her residence. Apply M. T., 27, Guildford-street, Russell-square.

THE ART of ETCHING TAUGHT in EIGHT LESSONS, at the Residence of the Pupils, for Five Guinea (including the requisite materials), by C. Stasler, author of "The Art of Etching," 41, Castle-street, Holborn.

A PRIVATE SECRETARY to a Nobleman or Gentleman, or as Secretary to an Institution.—The Advertiser, age 28, who holds a responsible Government Appointment, being at liberty early in the afternoon, is desirous of an ENGAGEMENT in either of the above capacities. He has acted as Private Secretary to a late Diplomatist; has received a Classical Education; understands French, German, and Spanish; is well experienced in Correspondence and Accounts, and is prepared with satisfactory references as to competency and respectability.—Address G. H., Post-office, Stockwell Green.

TO PARENTS and GUARDIANS.—A well-educated, gentlemanly Youth is required as PUPIL to a DENTIST of position and first-class practice, at the West End. He would be fully instructed in the Mechanical as well as the General Departments of the Profession, would join the family circle, and enjoy the comforts of a well-regulated home. If desired, he could follow the Preparatory Classes at either of the Colleges.—Apply to G. F. H., 66, Conduit-street, Regent-street.

TO CAPITALISTS.—A Young Man (under thirty-five), of respectable connections, prudent habits, and a general knowledge of business, willing to take the superintending management of the financial department, and can command from 7,000 to 10,000, may be admitted to a moiety of the Proprietorship of an old-established and first-class provincial Newspaper. None but Principals (with references) need apply, to THOMAS WHIGLEY, Esq., Bridge 114 in Mills, Rury, Love-croft, to Mr. T. B. WRIGHT, Midland Counties Herald Office, Birmingham.

CHEMICAL APPARATUS, &c.—WANTED TO PURCHASE, Second-hand, some Apparatus adapted to illustrate Popular Lectures in Chemistry, Magnetism, Electricity, &c.—Address, stating terms, A. Z., Union Club, Oxford.

ENGRAVINGS AND ETCHINGS. G. LOVE informs the ADMIRERS of FINE OLD ENGRAVINGS, he has on SALE a most extensive and valuable Collection of ANCIENT ENGRAVINGS, selected from the most important Public and Private Collections. Part III. is now ready and will be forwarded for two postage stamps, containing Engravings by and after Correggio, Goltzrus, Porporati, Marc-Antonio, Rubens, Vorsterman, Buiswert, Paul-Pontius, Suyderhoef, &c. GEORGE LOVE, 51, Bunhill-row, London. See Established above fifty years.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Messrs. COCKE & CO. respectfully solicit the attention of amateurs to the COLLODION, manufactured only by them from the formula of Mr. W. A. Delferier. This Collo-dion is superior to any other, and will not injure by keeping. Waxed, iodized, and Albumenized Papers of the first quality; also Photographic Chemicals of every kind from their own Laboratory.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Portraits, Copies of Pictures, Sculpture, &c. taken, and INSTRUCTION in the Art given daily, by Mr. ARCHIBALD LEWIS COCKE. Photographic Apparatus of all kinds constantly on Sale.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyll-place.

DAQUERRETYPE and STEREOGRAPHIC MINIATURES in the highest style of Art taken daily. Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life &c. without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected.—*Athenæum*, July 22, 1854. Mr. Mayall's portraits represent the high art of the daguerretype; they are as superior to the generality of such pictures as a deluge of rain is to a coarse woodcut.—*Art-Journal*, Nov. 1853. More pleasing and far more accurate than the generality of such pictures.—*Times*, July 17, 1854.

TO GENTLEMEN, DIRECTORS of PUBLIC COMPANIES, &c.—WANTED, an ENGAGEMENT as SECRETARY, or some similar appointment suitable for a Gentleman. Occupation being the chief object, no objection for a time to a honorary office. Age 28. Connections and references the best.—Address, H. B. Brooks's Newspaper Office, 24, Old Cavendish-street, Oxford-street.

TO AUTHORS.

ROBERT HARDWICKE, Printer and Publisher, 26, Duke-street, Piccadilly, begs to inform Authors and Possessors of MSS. desirous of publishing Works on any topic requiring extensive and immediate publicity, that he has at his command a large and well-assorted Machinery expressly adapted for printing Books, Pamphlets, Essays, Poems, &c., with the utmost Despatch and Economy.

Instructions to Authors with Specimens of Type and Sizes of Pages sent free on receipt of six stamps.

THE WAR.—Great interest having been excited by the discovery of a very remarkable Book of Prophecies, printed in 1794, predicting all the great events political, and relating to the Church of Rome, as they have since taken place; and also specially foretelling the present struggle in the East, with its termination, up to the year 2000, the Advertiser has reprinted the same, and will send a copy on receipt of 30 postage stamps with the writer's address.—Address to the Rev. J. T., at Mr. Henry Toms, Printer, Totnes.

TO STATIONERS, NEWS-AGENTS, and Others.—In a highly respectable Neighbourhood, North of the City.—Mr. PAGE is directed to SELL a VALUABLE, FANCY, and GENERAL STATIONERY TRADE, together with an excellent NEWS-AGENCY BUSINESS.—The Shop is elegantly fitted up, the Connection large. The Returns are upwards of 2,000, per annum. About 1,000 required.—Apply to Mr. PAGE, Valuer and Auctioneer, 8, Coleman-street.

TO NEWS-AGENTS, BOOKSELLERS, and Others.—A VALUABLE BUSINESS within two miles of the City, in a genteel and rapidly increasing Neighbourhood.—Mr. PAGE is instructed to SELL the old-established TRADE of a NEWS-AGENT, together with that of a BOOKSELLER and STATIONER. The House is modern and handsomely fitted with Plate Glass and suitable fittings. The Returns are nearly 1,500, per annum, and may be entered upon for about 500.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

TO BOOKSELLERS, LIBRARIANS, and Others.—In a first-rate Neighbourhood at the West-End, in the midst of several Squares.—Mr. PAGE is directed to SELL the TRADE of a BOOKSELLER, STATIONER, and NEWS-AGENT, together with an extensive Public Library. The Connection is first-rate, the Returns very large, and much to be gained. From 600, to 700, required.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

C. R. BROWN & J. MACINDOE, Auctioneers of FINE ART, LITERARY and other Property, 76, QUEEN-STREET, GLASGOW.

Consignments of Pictures, Articles of Virtù, Books, Decorative Furniture, &c. will have the advantage of an established and most extensive first-class connexion.

Season commences 1st October; ends 31st May.

NOTICE.—The BERNAL COLLECTION.—Messrs. CHRISTIE & MANSON respectfully give notice that the CATALOGUE of this celebrated Collection, with Seventy Illustrations, price Eight Shillings, is now ready. By Post, Nine Shillings.

8, King-street, St. James's-square.

* It enables us to learn at once something of what has been done in any particular line of research, and to obtain the necessary data for further investigation, as in nearly every instance the authority of each 'fact' is given.—*Athenæum*.

David Bogue, Fleet-street.

CORRECTED TO THE MEETING OF PARLIAMENT.

Price 6s. neatly bound.

THE POCKET PEERAGE and BARONET AGE OF GREAT BRITAIN and IRELAND, for 1855, with Genealogical and Historical Notices, and all the usual lists. By **HENRY R. FORSTER**, of the Morning Post. * Of all the various editions of the Peerage which annually claim our attention, Mr. Forster's is the best, not solely for the lateness of its information, but from the clear and lucid order of its arrangement.—*Atlas*.

David Bogue, Fleet-street.

BURNETT TREATISES.

THE TRUSTEES of Mr. BURNETT have now the satisfaction of announcing the decision come to by the Judges appointed, in terms of his Deed of Endowment, to Examine the Treatises lodged in the Competition, and to adjudge the two Premiums of 1,800*l.* and 600*l.* sterling.

Their Report was this day laid before a General Meeting of the Electors, held in the Town-Hall, Aberdeen; and the Trustees think it due to the Judges to append it at length.

After the Report was read to the Meeting, the Trustees declared the Author of the Treatise, No. 143 of their list, titled "Christian Theism," and with the Greek motto, "Τὸ ἀγαθὸν τῶν μὲν εἰ ἔχουσιν αἰῶνα τῶν δὲ κακῶν ἀναίρων," quoted in the Report, to be the successful Competitor for, and entitled to, the First Premium of 1,800*l.*; and the Author of the Treatise, No. 141 of their list, bearing the title "Theism," &c., and the Greek motto, "Ζητεῖν τὸν κρείον, κ. τ. λ.," from Acts xvii. 27, to be the successful Competitor for, and entitled to, the Second Prize of 600*l.*

Thereafter, the Trustees produced the two sealed envelopes bearing the said Titles and Mottos, and containing the names of the Authors of the respective Treatises; and the seals being then removed, it was found that the Author of the first-mentioned Treatise, No. 143, entitled to the First Premium, is the Rev. ROBERT ANCHOR THOMPSON, Louth, Lincolnshire; and the Author of the Treatise, No. 141, entitled to the Second Premium, is the Rev. JOHN TULLOCH, Manse of Kettins, Coupar-Angus, (now D.D., and Principal of St. Mary's College, University of St. Andrews.)

Messrs. WEBSTER were instructed forthwith to intimate to these gentlemen the result of the adjudication. It is deemed proper to notify, in this form, to the Authors of the other Treatises favourably distinguished in the Report of the Judges, that if they, or any of them, wish that their names should be made known, the Trustees will, upon hearing from them to that effect, with their true Addresses, open the sealed envelopes sent in by them, and will have great pleasure in announcing those names to the public.

With reference to the unsuccessful Treatises, the Trustees request that the Authors will give instructions to their Correspondents in Aberdeen to receive them (with the corresponding sealed envelopes), from Messrs. WEBSTER, and grant the proper receipts. This would be very desirable in every instance; but if it be found inconvenient in particular cases, Messrs. WEBSTER will forward the MSS., agreeably to such instructions as may be sent them by their Authors, on receiving pre-payment of the Postage. In all communications, the Treatises must be distinguished by the Title and Motto; and no communication can be attended to unless accompanied with Stamps to prepay the reply.

ALEX. WEBSTER.
JOHN GALEN.
JOHN WEBSTER.

Aberdeen, 20th January, 1855.

Report of the Judges.

We, the Judges appointed for the Burnett prizes, in reporting to the Trustees the result at which we have arrived, feel it necessary first to state that, after giving careful examination to the whole of the Treatises sent in, we have found considerable difficulty in coming to a decision, not on account of any difference of opinion among ourselves, but on account of the very near approach to equality of merit in a considerable number of the Treatises.

We should have been glad to find that there had been two treatises so incontestably superior to the rest as to release us from all hesitation. Still, though there is no Essay which, in our judgment, is not greatly capable of improvement, by omission or alteration (which we mention with reference to the future publication of such Essays), we are unanimously of opinion that there are three which stand, by an appreciable interval, in advance of the rest, viz. :—

(No. 143, in Mr. Webster's list.)—"Christian Theism." Motto, "Τὸ ἀγαθὸν τῶν μὲν εἰ ἔχουσιν αἰῶνα τῶν δὲ κακῶν ἀναίρων." (2 vols. stitched.)

(No. 141, *ibid.*)—"Theism," &c. Motto, "Ζητεῖν τὸν κρείον, κ. τ. λ."—Acts xvii. 27. (1 vol. bound.)

(No. 1, *ibid.*)—"The Witness of God; or, the Evidence of his Being and Perfections." Motto, "Ὅσα ἀλόγητον ἑαυτὸν ἀπέκριν."—Acts xiv. 17.—"Ask now the beasts," &c.—Job xii. 7. (2 vols.)

We are also of opinion, that of these, No. 143, "*Christian Theism*," &c., deserves the first place, and therefore to it we adjudge the first prize.

As to the other two, we find much greater difficulty in deciding which of them should be preferred. If the Trust Deed left a choice to the Judges in this matter, we should have awarded them *equal*. But as this does not appear to be the case, we deem it necessary to state that two of our number are disposed to assign a certain preference to No. 141, and that the third acquiesces in that judgment, since at the utmost he would have been disposed only to place them *equal*.

And, further, in compliance with a wish expressed by the Trustees (in a minute communicated by Mr. Webster), we beg to add that several other Treatises appear to us to possess considerable merit (though requiring extensive alteration and careful revision), more particularly the following (placed, not in order of merit, but of the numbers in Mr. Webster's list), viz. :—

(No. 72.)—"Of Providence, Material and Moral." Motto, "Ignotus." (In 6 vols.)

(No. 81.)—"Evidence for the Being, Power, Wisdom, and Goodness of God." Motto, "Nulla gens est tam barbara," &c.—*Cic.* (3 vols. bound.)

(No. 84.)—"On the Evidence that there is a Being, All-

powerful," &c. Motto, "Ὁ θεὸς ἀπὸ τῶν ἀνθρώπων εἶσα ἐξάρ." (2 vols.)
(No. 125.)—"The Anthem of Creation," &c. Motto, "Μέγας ἢ τοῦτος; Θεός;" (3 vols. bound.)
(No. 183.)—"On Natural Theology." Motto, "Alpha and Omega." (2 vols.)

Also, among the smaller Essays, some, though not competing with the above mentioned, appear to us of a kind likely to be useful, subject to the same remarks, viz. :—
(No. 117.)—Motto, "Semper et ubique."

(No. 127.)—"On the Existence," &c. "Si quid gubernat numen," &c. "If there's a Power above us."

(No. 206.)—"On the Being, Attributes," &c. Motto, "Lebensquelle."

(No. 162.)—"The Basis of Truth," &c.—A fragment, but of great promise.

(Signed) BADEN POWELL,
HENRY ROGERS,
ISAAC TAYLOR.

NICHOLSON AND ROWBOTHAM'S ALGEBRA.

A PRACTICAL SYSTEM OF ALGEBRA, designed for the Use of Schools and Private Students. By PETER NICHOLSON; and J. ROWBOTHAM, F.R.A.S. Author of a German Grammar, &c. 6th edition, carefully examined, 12mo. 5*s.* bound.—Also,

A KEY TO THE ABOVE. 12mo. 8*s.* bound.
London: Simpkin, Marshall & Co.

In 2 vols. 8vo. price 25*s.* bound in cloth, a New Edition, revised and greatly enlarged,

THE LIFE AND TIMES OF OLIVER GOLDSMITH.

By JOHN FORSTER, of the Inner Temple, Barrister-at-Law.

"When, in the year 1848, Mr. Forster published his 'Life of Goldsmith,' it was at once universally extolled as a happy result of laborious research and as a finished work of literary art.... The whole world of English literature just as it stood in the last century, till every mind received an impulse from the beginnings and outbreak of the French Revolution, is here delineated in the most masterly manner, with all its sorrows and all its enjoyments.... The second edition, which is in two stout octavo volumes, is nearly double the size of the first.... In 1848 Mr. Forster's work was an admirable biography of an admirable man. It is now much more—being also a *thesaurus* of information, as valuable to the special student as to the general reader."—*Times*, Jan. 21, 1855.

BRADBURY & EVANS, 11, Bouverie-street.

On the 3rd of February will be published, price 5*s.* 6*d.* cloth boards,

THE TENTH VOLUME
OF
HOUSEHOLD WORDS.

"THE BEST NAVAL HISTORY."—*Admiral Sir Pulteney Malcolm.*

Now complete, in 6 vols. 8vo. bound, price 2l. 14s.

JAMES'S
NAVAL HISTORY OF GREAT BRITAIN.

With a CONTINUATION of the HISTORY to the PRESENT TIME.

Embellished with a Portrait Gallery of the most distinguished Officers engaged in the late eventful War, and Plans of the Principal Battles.

"The best Naval History of England. Its impartial statement of facts is so well established, that it was constantly referred to by French naval officers visiting my ship in the Mediterranean to decide any question in discussion."

Admiral Sir Pulteney Malcolm.

"A work of which it is not too high praise to assert that it approaches as nearly to perfection as any historical work perhaps ever did."—*Edinburgh Review.*

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

Now ready, New Edition, in small 8vo. price 30s. with 41 beautiful Illustrations,

THE HISTORY OF THE GREAT FRENCH
REVOLUTION.

By M. THIERS, late Prime Minister of France.

"Although whole libraries have been written on the French Revolution, the palm of excellence has been awarded to the histories of Thiers and Mignet."—*Prescott the Historian.*

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

THE LAST WORK OF ÉMILE SOUVESTRE.

This day is published, fcap. 8vo. with Illustrations by ANELAY, price 5s.

LEAVES FROM A FAMILY JOURNAL.

By ÉMILE SOUVESTRE.

*** The exclusive right of translation has been secured by the Publishers, according to the International Copyright Convention between England and France. The present is therefore the only Edition which can be published in this country.

'Leaves from a Family Journal' is a charming story, full of the finest feelings of human nature—pure in principle, safe in its morality—every page teems with some good and wise precept. It is a book which every parent may read with profit, and place with certain advantage in the hands of a son or daughter.

GROOMBRIDGE & SONS, Publishers, 5, Paternoster-row, London.

PARLOUR LIBRARY.

THE STEP-MOTHER, by G. P. R. JAMES, forming Vol. 121 of this Series, price 1s. 6d., is published this day.

CASTLE AVON, by the AUTHOR of 'EMILIA WYNDHAM,' price 1s. 6d., will be published March 1.

Lately published,

MAURICE TIERNAY, the SOLDIER of FORTUNE. By the AUTHOR of 'SIR JASPER CAREW,' &c. &c.

"This novel, which forms the 119th volume of 'The Parlour Library,' while written in the dashing style for which the Author of 'Harry Lorrequer' is celebrated, is founded on historical facts, and is full of interesting historical matter. It is a story of the time of the French Revolution and of the Empire. The accounts of the French invasion of Ireland, the capture of Wolf Tone, and other incidents, are as authentic in detail as they are graphic in style. The work has already appeared in the pages of the *Dublin University Magazine*, but its publication in a separate form admits of our thus bearing testimony to its merits as a standard work of fiction. The proprietors of 'The Parlour Library,' in meeting the demand for good reading in their attractive series of books, have acted with judgment and spirit. The story of 'Maurice Tiernay' is sure to be widely popular."—*Literary Gazette.*

THE HUNTER'S FEAST. By Capt. MAYNE REID, Author of 'The Rifle-Rangers,' 'Scalp-Hunters,' &c. &c.

"A book of wild adventures, of dashing prairie life in the 'far West':—a book abounding with amusing incidents and graphic scenes, and so full of fresh breezy description, contains all the elements of popularity; and we may safely predict that 'The Hunter's Feast' will be read with general interest. It appeals, however, most strongly to the imagination of the young, who are bound implicitly to believe in every deed of daring and every marvellous exploit recorded in the volume."—*Lady's Newspaper.*

*** 'MAURICE TIERNAY' and 'THE HUNTER'S FEAST' are also issued in fancy covers by Alfred Crowquill. The extraordinary success of these two dashing books—the first depicting a Soldier's Life, and the second Adventures in the Prairie, &c.—has nearly exhausted the first impression. They will not be allowed to go out of print.

London: THOMAS HODGSON, 13, Paternoster-row.

Just published, in crown 8vo. price 7s. 6d. cloth,
BALDER.
 By the AUTHOR of 'THE ROMAN.'
 Second Edition, with Preface.

"In this poem we read a magnificent protest against the tendency of our age to materialism and positive philosophy and the apotheosis of mechanism and intellect. An age which everywhere manifests a blind atheistical denigration of force and power. The age to which all others that trumpet-tongued text, 'What shall I profit a man if he save the whole world and lose his own soul?' needs to be preached and sung. There are two hundred and eighty-three pages in this book, and not one but contains fine thoughts, magnificent imagery, striking similes, or searching reflections. Of the wealth of thought revealed, we can scarcely trust ourselves to speak, it is so great. We consider 'Balder' to be the first and worthy part of a great poem—one of such a degree of greatness, that it has scarce an equal in our country, and one that will take the public opinion some years to arrive at that greatness. To those who cannot see its purpose, we may say, as its chronicler wrote of Shakespeare, 'Read it again and again, and if so be you do not understand it then, there is manifest danger that you are not quick of comprehension.'"*—Edinburgh Review.*

"Genius is so unmistakably present in every page of the strange book before us, that to give examples from one, without injustice to the others, we find to be beyond possibility in the limits of a magazine review. We cannot, however, resist a passing allusion to the absence of all melo-drama in those scenes which nevertheless reach the very bounds of the dramatic, and to the instinctive avoidance of the heroic and artificial use of the terrible, under circumstances of the highest tragedy. These general facts infer a quality of intuition in the author, which only the true critic can properly estimate; and in such passages as the portrait of Amy in scene twenty-eight, and the *ἦθος* of scene thirty-seven, or scene twenty-four, he will recognize the same wonderful truth of instinct at work, in the calmest moods and most pastoral quietudes of the many-coloured landscape of life."*—Pioneer Magazine.*

"The lesson to be taught would make a grand theme for poetry, but only a crowned singer could hope to teach it. Let some large and wealthy mind study the darker possibilities of his own being—then the question may be modestly handled. Some such denizen of Parnassus—understanding by experience the peculiar temptations of high poetic temperament—knowing well all those airy illusive tongues that 'silly men's names' in the haunted wilderness of aspiration—looking steadily down that wrong turning, the gloomy avenue of that *via mala* he himself might have chosen—such an one could address his brethren, and all of us, with happiest effect. Qualifications adequate to an enterprise so worthy, Mr. Yendys unquestionably possesses; to some such purpose he appears to have devoted himself in the present poem, and, in our judgment, with signal success."*—British Quarterly Review.*

Recently published, in post 8vo. price 5s. cloth,
THE ROMAN.
 By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we have a new poet amongst us, we should almost despair of his vision. But we would not abandon the attempt while we had such an argument in reserve as the ensuing description of the Coliseum."*—Athenæum.*

"How far the merit corresponds with the magnitude of the work there may be some difference of opinion, but none as to the genius and power of the author."*—Literary Gazette.*

"Any man might be proud to be the author of this poem, which, if the first production of an author hitherto unknown, is full of the richest promise; and at any rate shows that we have poets still among us, who, if they would but take equal pains with our older writers, are capable of achievements not any way inferior to theirs."*—Guardian.*

"The hand that has struck this lyre is the hand of a master."*—Sun.*

SMITH, ELDER & CO. 65, Cornhill.

NOTICE.

Under the especial Patronage of Her Majesty and Prince Albert, Corrected throughout by the Nobility,

MR. LODGE'S PEERAGE and BARONET-AGE for 1855.

The numerous changes in noble families and their collateral branches, by decease, during the past year and in the recent memorable engagements, will render this New Edition of Mr. Lodge's Peerage one of the most important ever issued. As it is the only work in which the type is constantly kept standing, every correction is made in its proper place to the date of publication.
 Saunders & Otley, Publishers, Conduit-street.

KEITH JOHNSTON'S

SECOND EDITION.

NEW WORK ON THE SEAT OF WAR.

A MONTH IN THE CAMP BEFORE SEBASTOPOL.

By a NON-COMBATANT. Post 8vo. price 5s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 8vo. with Maps and Plans, price 18s.

THE GEOGRAPHY OF HERODOTUS

DEVELOPED, EXPLAINED, AND ILLUSTRATED FROM MODERN RESEARCHES AND DISCOVERIES.

By J. TALBOYS WHEELER, F.R.G.S.

"Mr. Wheeler has for Herodotus a relish keen and true, and it is no dull table-making spirit that he has spent so many years upon a careful and full exposition of his geographical ideas. He has brought taste as well as learning to bear on his work... The work here done by Mr. Wheeler, though the materials for it had been handled by Major Rennell and Niebuhr, has never been done thoroughly and systematically until now. The value of the book, most ably executed throughout, is therefore obvious enough to all classical students."

Examiner.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE ABBÉ HUC'S NEW WORK ON CHINA.

In 2 vols. 8vo. with a coloured Map, price 24s.

THE CHINESE EMPIRE.

By the ABBÉ HUC, many years Missionary Apostolic in China.

Copyright Edition, translated with the Author's sanction.

"We know no book of mere travel which contains so full a body of systematic information upon all aspects of Chinese society as the volumes now before us."

Examiner.

"The reader must consult for himself a work which is as instructive as a scientific treatise, as full of new facts as a journal, and as amusing as a romance."

Daily News.

"His volumes teem with valuable information, and contain one of the best pictures of China we have met with since the days of the Dominican pilgrims... His description is real and picturesque. It unfolds the life of China; it displays the character of the people; and evinces a thorough knowledge of Asiatic history and manners."

Athenæum.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 12mo. price 9s. 6d. cloth,

AN ACCOUNT OF THE LIFE AND LETTERS of CICERO, translated from the German of ABERN. Edited by the Rev. C. MERIVALE, B.D. late Fellow of St. John's College, Cambridge.

London: Longman, Brown, Green, and Longmans.

NEW WORK BY MRS. JAMESON.

In square crown 8vo. with Etchings and Woodcuts, price 18s.

A COMMONPLACE BOOK of THOUGHTS, MEMORIES, and FANCIES, original and selected. By Mrs. JAMESON, Author of *Sacred and Legendary Art*.

"A more suggestive and charming magazine of materials for thought we have not looked into for some time."—*Builder*.

"The work, which, like all Mrs. Jameson's late productions, is rich in artistic beauty, etchings and woodcuts alike redolent of grace, is destined to extend still more widely the reputation of the authoress, as one who thinks deeply and writes wisely."

Notes and Queries.

Examiner.

London: Longman, Brown, Green, and Longmans.

In One Volume, 8vo. with Woodcuts, price 60s. cloth; or 3l. 5s. half-bound in Russia, with flexible back.

NEW WORKS.

FOR SCHOOLS and COLLEGES.

MR. MURRAY'S LIST.

THE NEW NOVEL.
Now ready at all the Libraries, in 2 vols. 12s.
THE STEP-SON.
A Domestic Romance of the Present Day.
By F. N. DYER.

"Mr. Dyer has great distinctness of conception in whatever he undertakes to delineate with clearness and vigour of style."
—*Morning Chronicle*.

"The characters are well conceived and carefully delineated, and the story is vigorously and forcibly told."
—*Athenæum*.

London: Richard Bentley, New Burlington-street.

Now ready, in 8vo. with Map, 14s.
THE DRUSES OF THE LEBANON;
their Manners, Customs, and History. With a Translation of their Religious Code.
By GEORGE WASHINGTON CHASSEAUD,
late of Beyrout, Syria.

"A volume of remarkable interest. Mr. Chasseaud was principally attracted by the Druse population of Anti-Libanus, and learned early to appreciate their feelings, to inquire into their opinions, and to ponder over their romantic history. To him no scenes are more familiar than the Plains of Promise."
—*Athenæum*.
London: Richard Bentley, Publisher in Ordinary to Her Majesty.

Now ready at all the Libraries, in 2 vols. 12s.
WOMEN AS THEY ARE.
BY ONE OF THEM.

By the Author of "Margaret; or, Prejudice at Home and its Vicinity."
"Will not fail to find pleased and excited readers. The superiority of the present book over the author's former work is strikingly manifest."—*Examiner*.

London: Richard Bentley, New Burlington-street.

Just published, in post 8vo. 7s. 6d.
OUR CAMP IN TURKEY,
AND THE WAY TO IT.
By M. YOUNG.

Author of "Cutch" and "Western India."
"A volume that will be devoured by all who are interested in all that concerns our brave army in the East. The style is graphic and vigorous."—*Britannia*.

London: Richard Bentley, New Burlington-street.

Now ready, Vol. I. (complete in two), in 8vo. with Maps and Plans, 11s.
PROFESSOR CREASY'S HISTORY OF THE
OTTOMAN TURKS, from the Foundation of their Empire to the Present Time.

"Of all the histories of the Turks which the present War has produced, this is by far the best. Professor Creasy has brought to his task a mind more practised in historical investigation, and raised nearer to the elevated tone which is looked for in an historian."—*Spectator*.

"It will take rank as the standard work of English literature on the history of Turkey."—*John Bull*.

London: Richard Bentley, Publisher in Ordinary to Her Majesty.

Now ready, Second Edition, in 2 vols. post 8vo. 21s.
RECOLLECTIONS OF THE LITERARY LIFE OF
MARY RUSSELL MITFORD,
Author of "Our Village," &c.
WRITTEN BY HERSELF.

"Very attractive reading."—*Athenæum*.
"A work of enchanting interest."—*Morning Post*.
"An attractive medley of personal anecdotes, memories of the past, and gems of literature."—*Spectator*.
"Few would anticipate the boundless stores of anecdote in these varied and interesting volumes."—*Globe*.

London: Richard Bentley, New Burlington-street.

DR. DORAN'S NEW WORK.
This day, Second Edition, in post 8vo. 7s. 6d.
HABITS AND MANNERS.
With Remnants of Records on the Makers of Both.

By DR. DORAN.
Author of "Table Traits and Something on Them."
"Not only amusing, but full of strange information that every one would like to possess. It is the note-book of an intelligent, educated, and studious man, enabling the reader, by skimming over pages, to get an amount of knowledge for which the author has ransacked libraries."—*Times*.

"A treasury of classic memories, which reminds one of old Burton, and the fund of anecdote is inexhaustible."—*Morning Post*.
"Table Traits" was an excellent book, and this is in no respect inferior. It is as suggestive as it is entertaining."—*Examiner*.

London: Richard Bentley, New Burlington-street.

M. GUIZOT'S NEW WORK.
Now ready, Second Edition, in 2 vols. 8vo. 28s.
HISTORY OF OLIVER CROMWELL
and the ENGLISH COMMONWEALTH.
By M. GUIZOT.

Author of "History of the English Revolution," &c.
"Every way worthy of the European reputation which the author has acquired as philosopher and statesman."—*John Bull*.
"We cannot doubt that this important work will meet with a hearty and universal welcome."—*Athenæum*.
"Deserving all attention and respect in England."—*Examiner*.

London: Richard Bentley, Publisher in Ordinary to Her Majesty.

Now ready, Second Edition, in crown 8vo. 6s.
TABLE TRAITS AND SOMETHING ON
THEM.

By DR. DORAN.
"Dr. Doran's 'Table Traits' is an excellent book."—*Examiner*.
"A remarkable illustration of the power of genius to elevate, dignify, and ennoble the most familiar subjects."—*Morning Post*.
"Dr. Doran has produced something new and clever."
—*Athenæum*.

London: Richard Bentley, New Burlington-street.

Now ready, Second Edition, in 2 vols. 12s.
LAMARTINE'S MEMOIRS OF CELEBRATED CHARACTERS.

To which is now first added a Life of Milton.
"Lamartine's farewell literary offering to the reading world is by far the least imperfect prose production of its author, displaying even more than his accustomed loftiness of thought, animation of description and narrative, and felicity of style. We have no doubt it will form an important addition to its author's fame."—*Press*.
London: Richard Bentley, Publisher in Ordinary to Her Majesty.

WORKS PRINTED FOR

WALTON & MABERLY,

Upper Gower-street, and Ivy-lane, Paternoster-row.

A NEW DESCRIPTIVE CATALOGUE OF WORKS OF EDUCATION, and WORKS IN SCIENCE and GENERAL LITERATURE, published by WALTON & MABERLY, will be ready this Month (January), and will be forwarded (free) to any one writing for it.

Instead of laudatory extracts from reviews, general notices are given of the chief subjects and most prominent peculiarities of the books. The publication is designed to put the reader, as far as possible, in the same position as if he had inspected for himself, at least cursorily, the works described.

REVIEWS

Memoirs of the Life and Writings of James Montgomery; including Selections from his Correspondence, Remains in Prose and Verse, and Conversations on various Subjects. By John Holland and James Everett. Vols. I. and II. Longman & Co.

James Montgomery had, as he used pleasantly to say, a very narrow escape of being an Irishman. He was the son of Irish parents; but he was born, on the 4th of November, 1771, at Irvine, a seaport in Ayrshire. At that place, his father, a man who had been originally engaged in Ireland in pursuits of "humble but useful industry," held the pastoral charge of a small congregation of United Moravian Brethren. James was the eldest of three brothers. Their sister Mary died in infancy. At the age of four years, James was taken to Ireland, where he remained with his parents and brothers two years; and there, at Bally Kennedy, County Antrim, the first draughts of the well of learning were administered to him by Jemmy McCaffery, the village schoolmaster. The next removal was to the Moravian establishment at Fulneck, near Leeds, at the close of 1777. Six years later the parents quitted England for missionary work in the West Indies. They left their boys to the "Brethren," and father or mother the children never beheld again.

The Prince in the Happy Valley was not more completely out of the world than Montgomery and his brothers "cloistered up" at Fulneck. James was intended for the ministry; and the boy with fiery red hair, a terrible scorbatic taint in the blood, and a painfully defective vision, became at once a little monk. The routine of the life led by him, in common with the other boys, was all religious. It had its drawbacks,—but it had also its advantages. Children are none the worse for being told that of every action God is the witness:—men would be all the better if they never forgot such instruction. But there was recreation with this religion; and on one sunny holiday a rather liberal master determined for once to be gay beyond all rule, took the boys a long country walk, and sitting down behind a hedge in a green lane, read aloud to them Blair's 'Grave'! That reading marred Montgomery for a minister, and made of him a poet. He became fully "possessed,"—hesitated a little,—and finally, on hearing portions of Blackmore's 'Prince Arthur' read aloud, gave himself up to the divine, but painful, agitation of his soul—a soul athirst now for nothing but poetry.

His first poetical guide was an old Moravian choir-book, and what he found there he took to imitating. Not a volume, except a Moravian volume, was allowed to fall into his hands, save on one or two rare occasions, when he had brief access to mutilated selections on which his appetite was mocked, whetted, but never satisfied. During the whole years of residence here, the lad "never once during all that time conversed for ten minutes with any person whatsoever, except his companions, masters, or occasional Moravian visitors."

He went on writing Moravian poetry, and was rather encouraged than checked by the authorities, who hoped one day to be proud of the useful minister they had trained. His verses were full of love, ardent and divine; so ardent, that when, before he left Fulneck, he got permission to read some of the poems of Cowper, he found the style too pure and simple; and "I thought," said he, "I could write better verses myself."

He tried; and his school poetry, if not first-

rate in merit, was great in bulk. To composition he applied all his time and power, and for it he neglected every duty besides. Remonstrance and reproof had no effect. He was nothing if not poetical. He most positively would not be a priest. The "Brethren" grew angry, turned him out of the school, on the ground of alleged indolence, and sent him as an apprentice on trial to a worthy Moravian, named Lockwood, "who kept a retail shop at Mirfield, near Fulneck." Here, during a year and a half, he measured peas, weighed plums, composed skeleton epics and sacred songs, studied music at the "fine bread baker's," and "almost blew out his brains with an *hautboy*!"

At the end of this time he ran away, with a single change of linen and 3s. 6d. in his pocket. He turned his face to the world, and began the battle of life. The young struggler was only sixteen, but he had the true soldierly spirit to fit him for such a battle. He fought it foot by foot; and it was not till after some suffering that he rejoiced in conquering his first position—salaried shop-boy at Wath, the "queen of villages," and within a league of Wentworth House and Earl Fitzwilliam, who is said to have first bestowed on him the minstrel's guerdon in the shape of a guinea. The gold was given in return for a specimen of the poetry handed to the Earl by the aspiring poet himself.

After one year's service behind the counter, the thought of London became an uneasy and yet a welcome thought to the struggler's mind. He soon made a reality of it; and with a trunk full of verse presented himself to Harrison, of Paternoster Row, who put him aside as a poet, and took him in as a shopman. Here he worked with untiring zeal and stout heart. He tried all the avenues of fame, and was beaten back from all. When he offered verse, he was advised to try prose; when he presented prose, it was considered as too youthful in style; and when he tried to be manly, and wrote a story in the style of Fielding and Smollett, it was so full of profane oaths that the bookseller was frightened to publish it. The author himself would as soon have set his right hand in the flames as have allowed an oath to fall from his own lips; but he thought he was imitating Nature. He had only studied man in books; and, now in London, to the selling, reading, or writing of books he exclusively devoted himself. For the sights of the capital he had no curiosity whatever. He was almost as completely shut up within himself as he had previously been walled-in from the world at Fulneck. Disgusted and disappointed, he returned, in 1790, to his post behind the old counter at Wath,—where his recollections of the customers at Harrison's London shop, of D'Israeli, who had not yet written the 'Curiosities,' of that self-proclaimed (S. S.) Sinner Saved, old Huntington, and of Mrs. Charlotte Lennox, the first literary lady whom Montgomery had ever seen, made him welcome and gave him importance. He took down with him to Wath an increase of manuscripts and experience. He also appears to have laid in a small stock of London assurance. We judge from the sample offered by him on Sundays, at Wath Church, where, says he, "Nancy Wainwright was one of our Wath beauties, who, I am afraid, I sometimes looked at in church more than was proper."

The accidental reading in the *Sheffield Register* of "Wanted in a Counting-house in Sheffield, a Clerk," produced events of great importance in the life of Montgomery. He applied for the situation, forwarded his testimonials, wrote *God save the King* in his largest and best style to show his handwriting, and finally was accepted. This was in 1791, the

year of his majority. His master was Gales, the proprietor of the *Register*, printer, and auctioneer. As auctioneer's clerk, Montgomery commenced his service. It was at a sale of a valuable library, and the new clerk underwent a very Tantalian probation in having to pass over books of which he could look over no more than the title-page. It was furnished Sancho before the dishes which he dared not touch.

When Montgomery arrived in Sheffield he found himself at once involved in what he most detested—politics. He loved liberty, but political discussions were his abhorrence. But it was the time when men not only talked of liberty, but bled for her. The fever raged furiously at Sheffield; agitation was encouraged,—Gales was active in the fray,—spies were still more active for Government,—and the end of the first act was a noisy, large, but harmless, meeting, the leaders of which were pounced upon by the authorities, from whom Gales escaped, with ruin to himself, shipwreck to the *Register*, and a new career open to Montgomery, who was aided in founding the *Iris* on its ruins. The new paper and the new proprietor and printer flourished, but he was a suspected man. He printed an old song for a ballad-singer, one verse of which was pronounced to be seditious, though it had reference to past events, and for printing it he was condemned to an imprisonment of three months and a penalty of 20*l*. He endured his penalty like a hearty and honest man, returned to his paper, was extremely cautious in his advocacy of liberty,—but in giving an account of a street riot, happening to allude to an anonymous person who rode at the people and cut them down, the Militia Col. Athorpe swore that he was the person alluded to, prosecuted for libel, and an imprisonment of six months and a fine of 30*l*. was the penalty awarded for the alleged offence! It was the time when men were goaded into offence, and were punished even for remonstrating against their oppressors. Doubtless it was also the period when evil men sought to reap selfish benefit by sowing anarchy; but justice was indeed blind, and the law most confusedly administered. To hint that the suspension of the Habeas Corpus Act was a crime against the rights of the people was to promote rebellion against the Government. We suppose the latter did not understand Latin, for Dr. Parr's standing toast at that time was, "*Qui suspendunt, suspendantur*!"

It was the glory of Montgomery, however, that he not only suffered captivity unjustly, but that he compelled the love of his prosecutors towards him. The magistrates who committed him lived to pay him the homage of their respect. Col. Athorpe treated him as his own familiar friend, and Archdeacon Wrangham, with all his prejudices in favour of Church and King, wrote him pleasant notes, and wished him "*multos et felices*!"

The records of his imprisonments are the most touching in these volumes. He entered his cell with a silent horror, left it with an ecstatic delight, had a terrible dread of incarceration, and yet never thought of his "den," as he called it, but with a gush of tender affection. How this should be, the reader will find told, to his edification, in the biography. We may add, that the Government would have been heartily glad to have lain hold of his legal defender, Felix Vaughan, as well as of himself. But Felix, though of a very Radical tendency, had managed to keep himself, while engaged in "agitating," on the safe side of the law; and Dundas never said a happier thing than when he exclaimed, in allusion to his learned brother, "*Felix quem faciunt aliena pericula cautum*!"

The health of the poet was seriously affected

by his imprisonment. He never relaxed, indeed, in counting weekly his tale of bricks for the *Iris*, but he was averse to labour, neglected business, was unable even to enjoy his pipe and a select company in the little parlour at the "Wicket"; and was sunk in hypochondria and listlessness, from which he was only occasionally aroused by the horror of religious feelings. "There are three springs," he writes to his friend Aston, in 1799,—“there are three springs of everlasting uneasiness perpetually flowing in my bosom, the cares of life, ambition of fame, and the worst, the most deplorable of all, religious horrors. . . . I am tossed to and fro on a sea of doubts and perplexities; the further I am carried from that shore where I once was happily moored, the weaker grow my hopes of ever reaching another where I may anchor in safety,—at the same time my hopes of returning to the harbour I have left are diminished in proportion. This is the present state of my mind.” It was the deep dark before the dawn; his sun had not yet risen, and it was not till 1805, when, as he said, the romance of life was over, that the light he coveted penetrated to his soul, and the laurel he desired was wreathed for his brow. ‘The Wanderer of Switzerland’ was written, and with it, in 1806, Montgomery won lasting fame, though the *Edinburgh Review* said the poem had not in it a vitality of three years long.

The struggle was over and reputation won. Montgomery worked all the more zealously, and all the more happily, as he no longer doubted the reception his works would meet with at the hands of the public. He became, too, a copious reviewer in the *Eclectic*. In allusion to this work, he remarks “I have done what I believe no other living poet ever did, reviewed the whole of my contemporaries, except Lord Byron; and no one can say I have done them injustice.” From this conclusion we dissent,—seeing that Montgomery compared Kirke White with Walter Scott, and pronounced him essentially the better poet of the two!

As a narrative, these volumes cease to have much sustained interest after this date. The second volume closes with the year 1812, the year in which appeared ‘The World before the Flood.’ The author had previously published the ‘Prison Amusements,’ in 1797; the ‘Ocean,’ in 1805; ‘The Wanderer,’ in the following year; and in 1809, ‘The West Indies.’ The second volume is more critical and didactic than the first, deals more with the business and less with the romance of life, and is largely made up of extracts from the *Iris*, and of correspondence which Montgomery held with eminent men. It is, nevertheless, the volume which affords us best matter for citation. We cannot begin more appropriately than with the locality where Montgomery painted exquisite scenery, and with his opinions touching the method of poets and their works.—

“It was a small back room of a large building in the centre of the town, and looking immediately upon one of the meanest masses of dead brick walls in Sheffield: from its windows he could see none of the fine scenery in the neighbourhood, that might serve even to remind him in summer of pastoral Alpine landscapes, or in winter of falling avalanches,—of the cottages, the lakes, or the waterfalls of Switzerland at any season. * * * Mr. Everett one day remarked to Montgomery that Matlock would be a fine situation for the permanent residence of a poet, as the beauty and variety of the scenery, according to the current opinion, would induce sublime thoughts. He partly exploded the notion; observing that he should have to lament for his own situation, if it was so. ‘From the room in which I sit to write,’ said Montgomery, ‘and where some of my happiest pieces have been produced—those I mean which are most popular,—all

the prospect I have is a confined yard, where there are some miserable old walls and the backs of houses, which present to the eye neither beauty, variety, nor anything else calculated to inspire a single thought, except concerning the rough surface of the bricks, the corners of which have either been chipped off by violence, or fretted away by the weather. No; as a general rule, whatever of poetry is to be derived from scenery, must be secured before we sit down to compose—the impressions must be made already, and the mind must be abstracted from surrounding objects. It will not do to be expatiating abroad in observation, when we should be at home in concentration of thought.”

The poet was mundanely compelled to look occasionally after business and base lucre.—

“He was, therefore, sometimes seen riding forth to a considerable distance to collect what was due to him from subscribers to his newspaper. On one of these occasions he came to Knottingly, near Pontefract, where he intended to rest and dine, and dismounted, opposite the sign of the ‘Dog.’ He opened the house door, entered, told one of the inmates to take charge of his horse, which was done; and seeing the family at dinner, the poet said he would just sit down with them, and take part of what they had. He took his place at table, was helped to a plate of meat, and commenced operations very satisfactorily. A suspicion, however, somehow arose in his mind, and a question fell from his lips, to which a single monosyllable in reply, kindly enough uttered by his host, explained to the uninvited and abashed, but not unwelcome visitor that he had unwittingly entered, and was dining with a private family *next door* to the Inn! The parties had no suspicion as to who their guest might be, until the mistake was discovered: it was but a slight mitigation of the awkwardness of the misadventure, that Montgomery had, as it happened, the name of his involuntary entertainer in his book as a debtor.”

We have spoken of the two brothers of Montgomery. Ignatius became a Moravian minister; Robert is described as a “provision-merchant at Woolwich,”—but this is when the biographers are in a poetic vein. When they descend to common-place truth we find that the “provision-merchant” kept “a grocer’s shop.” He was a simple-minded man.—

“Mr. Ebenezer Rhodes having been elected ‘Master Cutler,’ Montgomery was present at the ‘Feast,’ which, according to ancient custom, he gave to the members of the corporation and other specially invited guests. Among the latter, on this occasion, was Mr. Robert Montgomery, from Woolwich, who, while walking out with the poet on the preceding day, came suddenly upon a field of flax in full flower—beautifully blue: ‘Brother, what sort of corn is that?’ inquired the stranger.—‘Such corn as your shirt is made of!’ was the prompt reply. We mention this incident as it was pleasantly related to Mr. Holland by Montgomery during their last interview on the day before his death.”

But Robert Montgomery need not be ashamed of his simplicity. Rousseau, naturalist as he was, could hardly tell one berry from another; and three of our greatest wits, disputing in a field whether the crop growing there was rye, barley, or oats, were set right by a clown, who truly pronounced it wheat. If Robert was a simple, the Poet was a bold man; he was the only one who ever dared to beard the ponderous Parr.—

“It was on a Sunday evening, and a goodly company of intelligent persons of both sexes were present: the Doctor, who was expected, came sailing into the room in full canonicals. When he had taken his seat in the splendid apartment, and surrounded as he was by a considerable number of ladies, his pipe was brought, and several fair hands were presently on the alert to reach him the tobacco, a light, &c., whose owners were doubtless anything but fond of either the sight or the smell of the volume of smoke which was soon after emitted. It was not this gentle demonstration of homage and adulation on the part of the sex, so natural and amiable in itself, that so much impressed Montgomery at the moment, as his own reflection on the conduct of the individual to whom

it was paid:—‘And is Dr. Parr,’ said our friend to himself, ‘really so great a man, that it is immaterial whoever else be annoyed so that his comfort be secured? Or is he so little a man that he cannot, even under such circumstances as these, forego the usual indulgence of his fondness for smoking?’ The poet, at a subsequent period, met the old Grecian at the residence of Mr. Roscoe in Liverpool. * * * When the company went into Roscoe’s library, Parr seated himself on a chair, drew it near the fire, and turned his back upon every other person present. On seeing this, Montgomery said to himself, ‘I’ll try if I cannot move him into a less unsocial position;’ and thereupon he plied the Doctor with such a close volley of conversation, that presently he began to wheel about in order to face the enemy, to the satisfaction of those who not only enjoyed the loquacity of the speakers, but seemed to guess aright as to the circumstance which occasioned its display.”

Of course our poet was a man extensively lionized. This occasionally led to some droll incidents. Here are two at Harrogate.—

“A lady of distinction was very formally introduced to the poet as an admirer of his genius, but who, it was obvious from her observations, had not even read his works! This incident was once adduced by him as a set-off against the overpraise of parties better informed. Another visitor, a Quaker, was represented by his friend as being anxious to be introduced to the poet; the latter, accordingly, was led up to the stranger, who appeared to be waiting for the interview, and said, ‘My name is Montgomery.’—‘I have heard of thee,’ was the astute reply of Broadbrim: and then both parties stood mute for some time! The pause gave Montgomery time to repent of his good-natured simplicity; for he was the last man in the world to intrude himself upon any person’s attention.”

We have alluded to the correspondence which enriches the second volume. There is one letter from Southey, which is of interest, from the fact that the writer, in 1812, seemed to fear that shipwreck of the intellect of which he was ultimately the victim. There is something painfully affecting in the following details:—

“‘You wish me a sounder frame, both of body and mind, than your own. My body, God be thanked! is as convenient a tenement as its occupier could desire. When you see me you will fancy me far advanced in consumption, so little is there of it; but there has never been more: and though it is by no means unlikely (from family predisposition) that this may be my appointed end, it is not at all the more likely because of my lean and hungry appearance. I am in far more danger of nervous diseases, from which nothing but perpetual self-management, and the fortunate circumstances of my life and disposition, preserve me. Nature gave me an indefatigable activity of mind, and a buoyancy of spirit which has ever enabled me to think little of difficulties, and to live in the light of hope; these gifts, too, were accompanied with an hilarity which has enabled me to retain a boy’s heart to the age of eight-and-thirty: but my senses are perilously acute—impressions sink into me too deeply: and at one time ideas had all the vividness and apparent reality of actual impressions to such a degree, that I believe a speedy removal to a foreign country, bringing with it a total change of all external objects, saved me from imminent danger. The remedy, or, at least, the prevention, of this is variety of employment; and that it is that has made me the various writer that I am, even more than the necessity of pursuing the gainful paths of literature. If I fix my attention, morning and evening, upon one subject, and if my latest evening studies are of a kind to interest me deeply, my rest is disturbed and broken; and those bodily derangements ensue that indicate great nervous susceptibility. Experience having taught me this, I fly from one thing to another, each new train of thought neutralising, as it were, the last; and thus in general maintain the balance so steadily, that I lie down at night with a mind as tranquil as an infant’s.”

We dismiss these volumes,—recommending Mr. Holland, who is responsible for the editing, to study condensation in those which are to follow, if he would secure for them the

patronage of the public. We would also hint to him that his recorded conversations with the Poet have not the Boswellian merit of letting the principal speaker have the most of the dialogue. Mr. Holland's opinions, too, upon some matters remind us of those of the Bishop's Lady upon Shakspeare: "Shakspeare? Shakspeare? Didn't he write for the stage? I think I once saw a Scotch play by Shakspeare!"

A Month in Portugal. By the Rev. Joseph Oldknow, M.A. Longman & Co.

THIS book is too ecclesiastical. Mr. Oldknow continually adverts to affairs of Church discipline and Church property. He shuts his eyes to the scenery of Portugal,—is unobservant of manners, and even forgetful of guitars and fleas, in order that he may soliloquize on the rents and funds of the clerical order. Descanting on the late blight of olives, he affirms it to have been a divine judgment on the people for appropriating tithes and resuming possession of certain conventual lands in 1834! In all directions, the same topic rises in his path—"the morning star of memory." Among flowery pastures in idyllic valleys, where black sheep tinkle their bells in harmony with the music of falling waters, he pauses,—not to admire the flushed hills and the silver rivers that shine in the landscape, but to speculate on the chances of a diminution in the incomes of Bishops in England. Great compassion has Mr. Oldknow for the Church of Portugal,—and in this characteristic fashion does he express it: "God look upon her in her low estate, and purify and restore her. Formerly, her wealth was very great."

As we have hinted, Mr. Oldknow does not appear to have much feeling for natural scenery. All his allusions to it are constrained, while his descriptive passages are made up of conventional epithets, which reflect no beauty, because they suggest no picture. A Southern church, however, with a pictorial interior,—with sunbursts through stained windows,—with arches and fretwork enriched by the play of these tinted shadows,—and choristers attired like "splendid angels newly drest,"—warms his imagination, which is cold amid the groves of Cintra. Yet even here his powers of description fail him, and he judiciously turns to Beckford's book of mellow pictures, in which a cathedral is painted in colours, rich, quaint and gorgeous as those of a missal. Among Mr. Oldknow's sketches we find none to quote, except a fragment on the social state of Portugal. Not even Spain has abounded more in idle patrician pride; the Lisbon peers have titles as sonorous, as empty and as long as the Dons of Madrid. Nevertheless, many a Carrabas in this decorated throng might do worse than let out carriages, like the Marquis de Ponte de Lima. Mr. Oldknow was at Lisbon when the young King sailed for England.—

"The vote of the Cortes allowing him to go was unanimous, with the exception of the Marquis de Ponte de Lima, who opposed his departure on the ground that he would be so much delighted with foreign countries, as on his return to be dissatisfied with his own. This Marquis, it is said, gets his living by letting out carriages for hire; but, to compensate for this lowering of his dignity, unlike most of the Portuguese nobility, he is out of debt! A gentleman told me that he lately gave sixpence to a Count to enable him to procure a breakfast; and another, that he not long ago gave twelve *vintems*, something more than a shilling, to a nephew of the Duke of Saldanha, Prime Minister and Commander-in-Chief, who came round to him with a begging letter. It is now in agitation to put an end to the entail of the estates of the nobility, and so to allow of their being sold. If this measure is carried, it will certainly be the ruin of their order; but when

people have become unable to support their rank, there seems no injustice in depriving them of it. I was sorry to hear that the credit of the Government was but indifferent. A merchant, with whom I am acquainted, was on one occasion applied to to supply them with some articles of commerce, but declined. Upon this he was assured he should be paid; to which he replied that he doubted not he should, if the then Government continued in office, but of this there was no certainty, and it had become so notoriously the practice of Portuguese governments to repudiate the debts of their predecessors, that he was not inclined to run the risk. I should fear that such want of principle in those who have the guidance of the nation, besides producing many other evils, must have a very demoralizing influence on the people at large. I had not the opportunity of seeing much of their domestic character, but was told that the seclusion in which, until lately, the Portuguese females were accustomed to be brought up, had the effect of making them ready, at an early age, for any intrigue. Latterly, however, there has been an improvement in this respect. May it only continue!"

This is the country in which Mr. Oldknow sighs over the rich endowments of former days. But his respect for prescriptive rights seems to be special,—not general. It applies to tithes, and not to titles. The Portuguese nobles might be deprived of their rank,—and yet the olives would be safe. There is some comfort here.

The Warden. By Anthony Trollope. Longman & Co.

'The Warden' is a clever, spirited, sketchy story, upon the difficulties which surround that vexed question, the administration of the charitable trusts in England. A certain old wool-stapler, named John Hiram, who died in Barchester, in 1434, left by his will the house in which he died and certain meadows and closes near the town, for the support of twelve superannuated wool-carders who should have been born and bred and spent their days in the said city of Barchester; also an almshouse was to be built for them, and a residence for the Warden, which Warden was also to receive a certain sum annually out of the rents of the lands. In process of time it came to pass, in the course of nature, that the value of the property bequeathed to these twelve old men greatly increased, and also that the trade of wool-carding entirely disappeared from Barchester: so old men of other callings were put in their stead,—generally *protégés* of the dignitaries of the Cathedral. A beautiful row of mediæval almshouses,—a handsome house for the Warden, in the same style, and beautifully appointed grounds,—the entrance to all which was through a ponderous gate, under a stone archway, which added greatly to the good appearance of the place,—had grown out of the improved rentals. Moreover, the salary of the Warden had increased in proportion, until it had grown to be full 800*l.* a year;—but the pittance of the poor old men, for whom the charity had been endowed, and for whom it was supposed to be kept up, remained still at the original figure of 1*s.* 4*d.* a day,—and the original number of the inmates had also been religiously adhered to. A more temptingly-baited trap for a reformer could not well be imagined. Of course one is found, who starts up and walks into it. John Bold, a young surgeon of Barchester, with plenty of leisure time on his hands, reads John Hiram's will, and determines to see the old men righted and the charity restored to its legitimate intentions. This serves as the prologue to the play. The interest is made, skilfully enough, to turn upon the fact, that all the parties concerned are perfectly conscientious, each fully persuaded that he is in the right;—whilst the reformer himself, who sets to work to

mend the old charity and pulls it about his ears, is in love with the Warden's youngest daughter,—which surely proved that he was disinterested in what he was attempting. The whole story is well and smartly told, but with too much indifference as to the rights of the case. The conclusion is inconclusive enough, inasmuch as it is left for the reader to infer that nobody has any right to the charity, which is left to fall into abeyance; and even the little modicum of good which was enjoyed by the twelve old men is lost; and the moral, if one there be, is, that it would have been far better if John Bold had never meddled in the matter at all,—seeing that the only result of his labours is to bring much trouble and inconvenience upon everybody connected with the charity, and to leave things far worse than he found them,—a warning to all ardent reformers how they lightly question a vested grievance! This is surely a very lame and unsatisfactory conclusion in which to leave so serious a question. If the turning aside of a public charity from its original and palpable intention be *wrong*, no smartness of writing or levity of speech can make it *right*; and it is the grave fault in this lively, pleasantly written book, that the right and wrong of the subject are melted down into a matter of perfect indifference, and the only point insisted upon or brought forth with any clearness is, the extreme hardship and *inconvenience* to the parties in possession, caused by any attempt to rectify their administration:—to say nothing of the toil and trouble and odium for those who rashly undertake to see justice done,—a lotos-eating style of appeal which would end eventually in the ruin of the lotos-eaters themselves, if that would be any satisfaction of the claims of justice. With this grave drawback, the book is, as we have said, an extremely clever and amusing one: all the characters are well and vigorously sketched. The twelve old men in the almshouses, the mild, simple-minded, conscientious Warden, who has received his income without doubt or misgiving till the day his conscience is rudely awakened by the voice of the "Jupiter," and his childlike anxiety to do right at whatever cost to himself; the pompous, worldly high Churchmen,—the archdeacon, who bullies his father the bishop, and tyrannizes over his father-in-law the warden,—Tom Towers, the oracle of the "Jupiter," the sketch of the "Jupiter" itself, are one and all excellent, and do all that is possible towards blinding the reader to the *laissez faire, laissez aller* spirit that pervades the book—or if he sees it of inducing him to pardon it. We had marked many passages for extract as we went along, and we are divided in our choice amongst them, but on the whole we will resist the description of Tom Towers and the "Jupiter," and give instead a scene between the archdeacon and his inestimable wife.—

"Dr. Grantly, who has as many eyes as Argus, and has long seen how the wind blows in that direction, thinks there are various strong reasons why this should not be so. He has not thought it wise as yet to speak to his father-in-law on the subject, for he knows how foolishly indulgent is Mr. Harding in everything that concerns his daughter; but he has discussed the matter with his all-trusted helpmate, within that sacred recess formed by the clerical bed-curtains at Plumstead Episcopi. How much sweet solace, how much valued counsel has our archdeacon received within that sainted enclosure! 'Tis there alone that he unbends, and comes down from his high church pedestal to the level of a mortal man. In the world, Dr. Grantly never lays aside that demeanour which so well becomes him. He has all the dignity of an ancient saint with the sleekness of a modern bishop; he is always the same; he is always the archdeacon; unlike Homer, he never nods. Even with his father-in-law, even with the bishop and dean, he maintains that sonorous tone and lofty deportment which strikes awe into the

young hearts of Barchester, and absolutely cowed the whole parish of Plumstead Episcopi. 'Tis only when he has exchanged that ever-new shovel hat for a tasselled nightcap, and those shining black habiliments for his accustomed *robe de nuit*, that Dr. Grantly talks, and looks, and thinks like an ordinary man. Many of us have often thought how severe a trial of faith must this be to the wives of our great church dignitaries. To us these men are personifications of St. Paul: their very gait is a speaking sermon; their clean and sombre apparel exacts from us faith and submission, and the cardinal virtues seem to hover round their sacred hats. A dean or archbishop, in the garb of his order, is sure of our reverence, and a well got-up bishop fills our very souls with awe. But how can this feeling be perpetuated in the bosoms of those who see the bishops without their aprons, and the archdeacons even in a lower state of *deshabille*? * * * 'My dear,' he said, as he adjusted the copious folds of his nightcap, 'there was that John Bold at your father's again to-day. I must say your father is very imprudent.' 'He is imprudent—he always was,' replied Mrs. Grantly, speaking from under the comfortable bed-clothes. 'There's nothing new in that.' 'No, my dear, there's nothing new—I know that; but at the present juncture of affairs, such imprudence is—is—I'll tell you what, my dear, if he does not take care what he's about, John Bold will be off with Eleanor.' 'I think he will, whether papa takes care or no; and why not?' 'Why not!' almost screamed the archdeacon, giving so rough a pull at his nightcap as almost to bring it over his nose; 'why not!—that pestilent, interfering upstart, John Bold—the most vulgar young person I ever met! Do you know that he is meddling with your father's affairs in a most uncalled-for—most—' And being at a loss for an epithet sufficiently injurious, he finished his expressions of horror by muttering 'Good Heavens!' in a manner that had been found very efficacious in clerical meetings of the diocese. He must for the moment have forgotten where he was. 'As to his vulgarity, archdeacon' (Mrs. Grantly had never assumed a more familiar term than this in addressing her husband), 'I don't agree with you. Not that I like Mr. Bold—he is a great deal too conceited for me; but then Eleanor does, and it would be the best thing in the world for papa if they were to marry. Bold would never trouble himself about Hiram's Hospital if he were papa's son-in-law.' And the lady turned herself round under the bed-clothes in a manner to which the doctor was well accustomed, and which told him, as plainly as words, that as far as she was concerned the subject was over for that night. 'Good Heavens!' murmured the doctor again—he was evidently much put beside himself."

Some of the characters in the story are drawn from the life,—and no reader of newspapers will mistake the original of the "Jupiter."

Sappho: a Tragedy. By Franz Grillparzer. Translated by L. C. C. Edinburgh, Constable & Son; London, Hamilton, Adams & Co.

HERE is the old, burning Greek legend passionately dramatized by a modern German poet. The Muse of Lesbos stands before us instinct with a fearful, fervid life, in which the heart of Woman and the soul of Genius meet, now in union, now in conflict—a life fraught with small blessing to others, brimming over with agony and glory to its owner.—The contours and the colours of Herr Grillparzer's heroine may not be according to the true antique. In his Sappho's triumph, love, and despair, after she discovers that her love has been wasted, there may be too much that resembles the modern 'Corinne.' The modes of Sophocles and Euripides, and the extant fragments left by the mythical Lyrist herself, must, perhaps, be forgotten, while we follow this German tragedy; but not real womanhood, not real suffering—not the solitude which environs some of those whom Fame has crowned,—not the earthquake which opens a grave at their feet, when they learn the truth, old as time and melancholy as death, that Genius can-

not claim Love as its reward!—We do not feel called on to anatomize faults, to establish proportions,—to complain of passages as too tedious, of rhetoric as too subtly spun in regard to this 'Sappho.' There is something of revelation in the heroine's character as it was conceived by Herr Grillparzer; something, therefore, also of creation; and the reader—after having consorted as largely as he must do with phantoms and puppets, with modern masqueraders or galvanized effigies instead of human creatures—will find such a work, when suddenly returned to, exercise startling power over him, let his cooler critical judgment decide as it will on the school to which the drama belongs. Such, at least, has been our own case.—We may fail to prove the potency of the spell by a single extract—the more as the translator before us is restrained rather than impulsive, more correct than musical. The poet to have rendered this tragedy into English was Mrs. Hemans. The following, however, is not infelicitous as a version of the scene in which the Woman begins to search and to mistrust herself—first to feel not only that sinking which follows a moment of preternatural excitement, but that yearning for sympathy which makes her alive to all that puts a gulph betwixt her and the confidence of her kind.—

Sappho. What can my poverty that loved one give?
He stands there in the fulness of his youth,
Adorned with all the fairest flowers of life;
His scarce awaken'd mind in glad surprise
The wide extent of its own powers surveys,
Spreads out bold pinions, and to highest skies
Directs, ambitious, its keen eagle gaze.
All that is great, and high, and rich, and fair,
Is his. The world belongeth to the strong.
And I! O all ye gracious gods above!
Oh, give to me the vanish'd past again!
Blot out within my breast each deep worn trace
That former sorrows—former joys have left.
All I have felt—have said—have suffered—done—
Annihilate it e'en in memory!
Let me return once more to that far time
When time still, with childhood's rounded cheek,
And feelings indistinct within my breast,
On the new world I gazed with mind as new!
When 'stead of sad experience, guesses sweet
But dallied with the golden strings—and love
Was a mere magic land as yet to me,
An unknown, untried, magic, stranger-land!

Melitta. What ails my mistress? Speak—What moves thee so?

Sappho. Upon the edge of the deep gulf I stand,
That yawns devouring between him and me;
I see the golden land that smiles beyond,—
Mine eye can reach it—but my foot may not!
Wo unto all who once have been allured
From out the silent circle of their home
By the vain shadow of an empty fame!
They hold their course o'er a tempestuous sea
In a most fragile bark. No flower blooms there,—
There springs no seed, and there no trees wave green,—
Nothing but grey infinitude around!
They only see from far the cheerful shore,
And all confused with hollow sound of waves,
The voices of their loved ones reach their ear!
If late reflecting—they would fain put back
And seek the fields of home they careless left.
Summer is over! Flow'rs their bloom have shed,
(Taking off her wreath and looking at it sadly.)
And only dry leaves rustle where they tread!

In another respect this play is noticeable—for the force with which the tide of emotion sweeps on. The scene closing the third act, where Phaon outrages Sappho by avowing his love for Melitta before her face, merely broken by a few wild interjections on the part of his victim, is finely conducted. Possibly, it may have been to win some sympathy for one who stands in so equivocal an attitude—in part to redeem this wavering Phaon—that Sappho was shown so openly tyrannical and vindictive in her passion. But by this we are not made to hate her. The German poet does not merely talk of the excess of her love—he displays it; and in this excess lie the might and the truth of his creation. Right or wrong, it is fascinating in its intensity.

We do not conceive that 'Sappho' is a play which could be acted on the English stage. The female characters strain our requisitions too highly for our entertaining any hope of seeing

them personated,—and a wordy and violent counterpart of *Norma* (without the music), and a comely and blushing *Adalgisa*, are, perhaps, the utmost that could be attained. These, in presenting such a tale, would be more repulsive than satisfactory. But there is an ideal drama, which, having read, we can fancy being acted,—and to test the value of 'Sappho' as belonging to this class of works, let the reader compare his impressions respecting it with those which he will derive on closing the more recent classical tragedy of modern times, which has given its author a permanent standing and success on the stage of his country—we mean the 'Lucrèce' of M. Ponsard. The French play may win his approval for its conformity with the canons of the Parisian stage,—but the drama of Herr Grillparzer will be recollected as a "charm of powerful trouble" belonging to no peculiar country.

The Chinese Rebel Chief, Hung-Siu-tsen; and the Origin of the Insurrection in China. By the Rev. T. Hamberg. With an Introduction by G. Pearse. Walton & Maberly.

SUCH a narrative as this ought to be received with caution. The materials were supplied to Mr. Hamberg, a late missionary of the Basle Society, by Hung-Jin, a relative of Hung-Siu-tsen, who is here represented as the leader of the great Chinese revolt. In Europe the pretender has hitherto been known under the name of Tien-te, or T'heenteh, though some accounts describe that personage as only captain-general of the insurgent troops, acting under the orders of a master. The version now proposed suggests that T'heenteh and Siu-tsen are identical,—and that the former appellation has been derived from a flattering title bestowed on the rebel Emperor by his adherents. But, without questioning the good faith of Mr. Hamberg or Mr. Pearse, we cannot avoid doubting the authenticity of Hung-Jin's report. Although "a cousin and intimate friend" of the insurrectionary chief, his knowledge did not come directly from him, but from his "relatives and friends." Now, as Hung-Siu-tsen claims about "five hundred" relatives, we are not much impressed by this fact. Moreover, these informants, notwithstanding their familiar acquaintance with the circumstances of the revolution and with the founder of the new dynasty, only go so far as to say "that they fully believe that T'heenteh is no other person than Hung-Siu-tsen." When the whole story is told, in detail, and the parentage, education, reveries, motives, and policy of the rebel leader are explained, it seems curious that a doubt should still exist whether a name which has become renowned in China, as well as in Europe, belongs to a real or to a fabulous person, or whether it applies to a chief already celebrated under another appellation. The Chinese are a people among whom we expect to find such a confusion of terms, which has caused, indeed, in the minds of learned Orientalists a certain scepticism as to the existence, at any time, of Confucius, or properly, of Kon-fu-tzee. In the same manner, it has been surmised that the Emperor talked of as prepared to mount the throne of the fallen Mantchus is a myth, or is represented in different quarters by different individuals, ambitious of succeeding the lords of the yellow robe. Of course, it is impossible that Confucius should have written a tenth part of the works ascribed to him; and also, it is reasonable to suspect that various impersonations should arise of the spirit of hostility which has been kindled in the northern and eastern regions of Asia against an alien rule. M. Huc believes the revolt to be the work of robbers, and discredits the influence of missionary exertions in largely moving the Chinese mind. MM. Yvan and Callery give a

statement opposed, in many points, to the tale of Hung-Jin; which, however, we do not altogether disbelieve, though we refuse to concede to it the historical importance assigned by the editors of the present volume.

Half-civilized converts especially are apt to give imaginative accounts, not necessarily mendacious, of themselves and their brethren, since these are pleasing to missionaries. The figurative style of Eastern speech also is not to be forgotten. We remember an instance of Asiatic hyperbole which was noticed by a resident in Canara. His servant, a native proselyte, told him solemnly of a storm on the hills, with hail-stones "as big as bulls."—"Was each stone as large as this nut?" inquired the missionary.—"No, no," said his servant; "but I mean they were very large!"

As for the "general appearance of truthfulness" ascribed to the narrative, it has escaped us. The story is too full and fluent, too marvellous and romantic to incline us to credulity. The main statements are,—that Hung-Siu-tuen, the native of a village about thirty miles from Canton, is sprung from a family of all but immaculate virtue; that his parents inhabited a humble cottage, in a back street, where he was born in 1813, and that he pursued from infancy a career as strange and as fortuitous as that of him who sleeps at Mecca. At his birth he received, according to the Chinese custom, a *milk name*, and was called "Brilliant Fire." Upon attaining maturity, however, he adopted his *literary name*, and styled himself *Siu-tuen*, or "Elegant and Perfect," Hung being the patronymic of his clan. When seven years old he was put to school:—

"In the course of five or six years, he had already studied and committed to memory the Four Books on Virtue, Conversations of Confucius, and works of Mencius; the Five Classics, or books of general philosophy, poetry, rites, and history; the Koo-wun and the Hau-king, or memoir of filial duty. Afterwards, he read for himself the History of China, and the more extraordinary books of Chinese literature, all of which he easily understood on the first perusal."

No circumstance is omitted from the narrative which could render it attractive, curious—and incredible. Every one admired and loved the elegant and perfect scholar; teachers were proud of instructing him without payment; his relatives brought him food and clothing that he might continue his studies, yet, at sixteen he was forced to lead herds to pasture. But he soon found friends, and was elected to be tutor of the village. From that time he made progress in the ineffectual and formal pedantry of China, but was unsuccessful in his attempt to obtain a high-class diploma. Now comes the strange part of the story, which is not criticized by the narrator, who repeats it on the testimony of Hung-Jin. Siu-tuen visited Canton in 1836, and again entered the intellectual Olympia in search of academic honours.—

"Just before the office of the Superintendent of Finances, he found a man dressed, according to the custom of the Ming dynasty, in a coat with wide sleeves, and having his hair tied in a knot upon his head. The man was unacquainted with the Chinese vernacular tongue, and employed a native as interpreter. A number of people were gathering round the stranger, who was prognosticating respecting the fulfilment of their wishes, even without waiting for questions on their part. Siu-tuen approached the man, intending to ask if he should attain a literary degree, but the man anticipated him by saying,—'You will attain the highest rank, but do not be grieved, for grief will make you sick. I congratulate your virtuous father.' On the following day he again met with two men in the Liung-tsang Street. One of these men had in his possession a parcel of books, consisting of nine small volumes, being a complete set of a work entitled '*Keuen-shi-leang-yen*,' or 'Good Words for exhorting the Age;' the whole

of which he gave Hung-Siu-tuen, who, on his return from the examination, brought them home, and after a superficial glance at their contents, placed them in his book-case, without at the time considering them to be of any particular importance."

We pass over his sickness, his etherial visions, his ecstasies, the change in his aspect and demeanour, and hasten to resume the tale of the books he thus received and thus disposed of, "after a superficial glance at their contents." They consisted of some tracts compiled from the Bible, and explanatory of its doctrines. Hung-Siu-tuen's cousin borrowed, read and returned them, remarking,— "that their contents were very extraordinary, and differed greatly from Chinese books. Siu-tuen then took the books, and commenced reading them closely and carefully. He was greatly astonished to find in these books the key to his own visions, which he had had during his sickness, six years before; he found their contents to correspond in a remarkable manner with what he had seen and heard at that time."

The literal meaning of all this is, that Siu-tuen, by his dreams, became prescient of the Scriptures without perusing them. Of course, the unpoetical explanation would be, that his visions were reminiscences of what he had read during the "superficial glance" to which allusion has been made. Upon that hint, however, he became the preacher of a doctrine partially new to the Chinese, and thenceforth his career is described as similar to that of Mohammed in Arabia and of Nanak in India. A certain proportion of Christianity was blended with the tenets he promulgated and the discipline he enforced: he was a moral reformer as well as an iconoclast; but there was obviously no little ambition mixed up with his religious views. We pause, however, to note the ideas of Hung-Jin on the nobility and dignity of his kinsman's appearance.—

"He sat erect on his chair, with his hands placed upon his knees, and his feet resting a little apart, but never crossed on the ground, without leaning backwards or to either side; and though sitting for hours, he never appeared fatigued. He did not look aslant or backwards; his pace in walking was dignified, neither quick nor slow; he now spoke less than before, and seldom laughed."

Much as he hated the idolaters' images, this Chinaman must have resembled one of them as he sat, with his feet apart, his limbs straight, his hands on his knees, his back stiffly withdrawn from the chair, and his eyes fixed, like that of a Crusader's effigy. However, the predatory tribes abounding in China began to extend their action; the new prophet attracted multitudes of them to his flag, and declared open war against the reigning dynasty. The Triad Society, we are told, was entirely subordinate, and played only a secondary part, for Siu-tuen cautiously discountenanced any idea of seeking for the lost lineage of Ming.—

"Though I never entered the Triad Society, I have often heard it said that their object is to subvert the Tsing and restore the Ming dynasty. Such an expression was very proper in the time of Khang-hi, when this Society was at first formed; but now, after the lapse of two hundred years, we may still speak of subverting the Tsing, but we cannot properly speak of restoring the Ming. At all events, when our native mountains and rivers are recovered, a new dynasty must be established."

There is policy here, but egotism also. He was already a pretender, and his adherents soon elected him to be Emperor of the new dynasty which divides the Chinese realm.

The story thus presented contains, very probably, some truth. But we scarcely think it accounts for the revolution in China. We seek elsewhere for "the primary origin" of that wonderful movement. Siu-tuen, no doubt, fills a part—perhaps a high part—in the drama;

but the causes are, as we think, more ancient, more widely diffused, more deeply founded in the social state and political vicissitudes of China, than we are allowed to infer from the relation of Hung-Jin. The statement is curious as containing a simple Chinese version of a mysterious history; but as portions of it are obviously addressed to the credulous, we value it as little more than a poetical narrative slightly suggested by actual incidents.

Transactions of the Ossianic Society for the Year 1853.—Vol. I. *The Battle of Gabhra.* By Nicholas O'Kearney. Dublin, printed for the use of the Members.

THE Ossianic Society designs to publish, from manuscripts, the Irish originals of those poems which were manufactured, as is contended by Macpherson, into his Poems of Ossian. To have been consistent, the new Society should have repudiated the very name of Ossian. Oisín is the form in which the name of the old minstrel appears in these poems. The work now presented as the first-fruits of the Society's labours contains several poems upon the Battle of Gabhra,—well known to persons acquainted with these recondite matters as being the engagement which put an end to the rule in Ireland of the Fenian heroes, whose achievements are the great subjects of Irish traditional song. This Battle of Gabhra is also the same which Macpherson converted into "Temora." The chief poem is in the form of a dialogue between Ossian, or Oisín, who was engaged in the bloody fight, and St. Patrick, who came into Ireland about 150 years afterwards. There exist shorter but more ancient Ossianic poems on the exploits of warriors slain at Gabhra. Several of these are here printed, including the one which is perhaps the most ancient of those which at present remain, and the foundation of much that was subsequently written. This is printed from a manuscript, said to be of the twelfth century, entitled 'The Book of Leinster,' preserved in the Library of Trinity College, Dublin. The present volume has been edited by Mr. Nicholas O'Kearney. His illustrative matter, although we cannot say that it always carries with it our assent, has evidently been compiled with care.

Two points of belief asserted to belong to Irish bardic antiquity are of a very distinguishing character,—that, namely, in an elysium of Eastern voluptuousness, and that in the transmigration of souls. We do not assert—for in these matters it is necessary to speak by the card—that either of these points has ever been satisfactorily established; but Mr. O'Kearney supposes the following extracts from a long poem attributed to Oisín, to allude to a future state believed in, and not to a fanciful state of existence poetically imagined. *Tir na n-Og* means "the Land of Perpetual Youth." It is thus described:—

Tir na n-Og is the most beautiful country that can be found,
The most productive now beneath the sun;
The trees are bending under fruit and bloom,
While foliage grows to the top of every bramble.

Wine and honey are abundant in it,
And everything the eye ever beheld;
Consumption shall not waste you during life,
Neither shall you see death or dissolution.

You shall have banquets, gaming, and drinking,
You shall enjoy the enchanting music of the harp;
You shall have gold and silver,
You shall also have many jewels.

* * * * *
You shall get a well-fitted protecting coat of mail,
A gold-hilted sword capable and quick for execution;
From which none ever escaped alive,
Who beheld the keen-edged weapon.

* * * * *
You shall get one hundred merry young maidens,
Bright and shining like the sun;
Who excel in shape, form, and features,
And whose voices are sweeter than the melody of the birds.

You shall get one hundred champions very expert in battle,
All well versed in feats of activity,
Armed and clothed ready to attend you,
In Tir na n-Og, if you come with me.

—There is certainly less of the cold North than of the bright dreams of an Eastern sky in these imaginings.

The other doctrine—that of the transmigration—is brought by Mr. O'Kearney to bear upon the historical value of these poems. The anachronism of making Oisín and St. Patrick contemporaries having been remarked upon, Mr. O'Kearney offers the following explanation:—

"It is very possible St. Patrick met some old Pagans, if not Druids, whom he converted, and who gave much information relative to Ireland, but most probably it was too much sprinkled with Pagan abominations, since, it is said, that he, on one occasion, burned three hundred volumes of Druidical works. It is doubtful, however, if St. Patrick ever saw the real Oisín, but only some Druid or old *seanchaidhe*, who believed himself to be Oisín revived, in virtue of the Druidical doctrine of metempsychosis, or transmigration of the spirit into other bodies."

—This is an explanation which, as it seems to us, can produce little effect upon the original objection, even although fortified by the stronger, but strictly analogous, story of Tuan Mac Coireall. This worthy was able to relate the history of the antediluvian colonization of Ireland, because being then a man and alive, upon his death he lived 300 years as a deer, then 300 years as a wild boar, afterwards 300 years as an eagle, from which state he passed for 300 years into that of a salmon. In his fishy appearance he was caught by a fisherman, and presented as a dainty morsel to the Queen of Ireland. Her Majesty, "immediately when she tasted it, conceived and brought forth the noted Tuan Mac Coireall," who, in due time, related the history of the primitive colonization of his doubly native land,—"and no person," remarks Mr. O'Kearney, "could doubt the accuracy of the history, simply because, like Oisín, Tuan witnessed all the facts he related." Whether we believe his history or not, we may hope that Tuan, after his second residence in the flesh of man, was able to pass that mysterious bridge said to be the complement of the Irish doctrine of transmigration, and which is unquestionably one of the beautiful products of the rich imagination of the East. It is called "the bridge of one hair":—we withhold the original Irish designation, but have it ready to produce in case of necessity. Its passage is easy to the just, but on the touch of the wicked the bridge collapses until it is ultimately neither broader nor stronger than a single hair! Woe betide the poor wretch who is then upon it.

History of My Life—[*Histoire, &c.*]. Part II.
—Part III. Chapters 1 to 3. *Feuilleton* of
La Presse.

OUR last notice of this singular work closed with the marriage of Madame Dudevant's father. At that point the general reader may find it expedient to pause and clear his brain; since the 'History,' if not read with some judicial sagacity, may bewilder him, both by the nature of its facts and the ingenuity with which these are grouped and propounded. To persons of a lively turn, the French Lady's narrative may recall the quatrain from the faëry burlesque—

Suppose that I were you,
Suppose that you were me,
Suppose that both were somebody else,
I wonder who we should be.

They will be tempted, too, to recollect *Lady Blarney's* "Virtue, madam, virtue"! which so profoundly impressed *Mrs. Primrose*, by the manner in which Madame Dudevant throws off her

theory of "solidarity" over the crooked branches of her family tree. She wastes time and labour on details of no interest, on passages which it is useless to follow,—on facts stated singly in order that their bearing on other facts may not create a prejudice. Page succeeds to page, paragraph to paragraph,—in order merely (it seems to us) that we may arrive at some such climax as this:—"I am what I am; I have written what I have written, from having been born of gifted people, who—partly from circumstance, partly from temperament—despised the established ordinances and arrangements of morals and law. I passed my childhood with a brother (who was not my legitimate brother).—I was separated from a sister (who was not my legitimate sister). I learned as I grew up that the semi-royal origin of my grandmother, so dearly prized by her, was disputed, owing to some ambiguous phrases in the 'Mémoires' of Marmontel; which matter in debate was only settled by the testimonies and researches of her brother (who was not her legitimate brother). During a large part of my life I was in doubt as to my own parentage. Can you wonder, then, if I have inherited instincts and advocated principles of rebellion against the world's established code of domestic obligation and duty?"

Had Madame Dudevant said something like this openly when commencing her book, instead of confessing (for her ancestors) with the sentimental subtlety of a consummate artist,—she would have been more intelligible, and she would have appeared to have been more honest. We say "appeared," because we believe there has been no intention on her part to gloss over or to mislead. Why, then, it may be asked, must she resort to all that fencing and management of which we have been speaking? The answer and the reason may be found among the regrets, qualifications, references to past "enthusiasms" and to present tolerations, which the reader will not fail to mark in her 'History.' These, we repeat, are thrown out unconsciously. We conceive that they must not be cavilled at as hypocrisies, so much as regarded as the inevitable experiences of mature genius, when it has commenced its career in youth with turbulent defiance. Again and again those who were rebels and heretics may be remarked as pausing at the cross-roads in middle-age,—again and again be seen nervously stealing back towards shrines of shelter established by Custom, when the shadows of evening begin to fall. If, as Wordsworth sings, "the world is too much with" the common-place and the fearful, it may have been too little with the original and audacious to admit of their ultimately working out their purposes in calm independence of the world. A craving for reconciliation hardly ever fails to succeed to antagonism like theirs. Further, by authors like Madame Dudevant, the world is often most solicitously courted when it is most violently dared. Nor is it of much consequence to our argument if the world courted be composed, not of specious hypocrites and fools of fashion, but of beneficent actors and noble thinkers. Be the audience to be influenced what it may, the very desire indirectly to make the best of a difficult case attests its direct badness. Those who are at ease have no need to plead, to manage, to reveal by halves;—to fascinate with glimpses of a fact, against which, if we saw it as a whole we should exclaim. Those who are not at ease dare not—cannot—move, speak, write naturally. They have recourse to expedients, stratagems, mystifications and false colourings, whether they know it or not. And thus it is with the French Lady. More than this we need not say—less than this we ought not to say—having undertaken to deal with Madame Dudevant's confessions. They

can harm none, when their bearing and meaning are plainly, not uncharitably, understood. They will make some readers—and these not illiberal ones—thoughtful and melancholy.

Shakspeare's *Beatrice* found a far-fetched pedigree for her merriment in the star that danced "under which *she* was born." If analogies hold good, Madame Dudevant ought to be sprightlier even than *Signor Montanto's* tormentor,—under such auspices of gaiety was she ushered into life. The circumstances of her birth even outdid those of the Scottish gentleman,—who, Scott tells us, was all his life called "the Parenthesis," from his having come into the world betwixt the hands of a rubber at whist. The young couple, her father and mother, were sheltered in very poor apartments in Paris, being afraid to confess their marriage to the bridegroom's aristocratic mother, but not in too much awe to divert themselves. They were dancing one day—the bride in a rose-coloured dress, and Monsieur playing for the dancers on his violin—when Madame Victoire stepped out of the *quadrille* and left the room. Hardly was the last *chassez-huit* over, when her sister Lucie, who had followed her, cried,—

"Come, come, Maurice, you have a daughter. * * She was born to music, and among roses. She will have good fortune," said my aunt.

Surely, the young Lady who entered life to the tune of so pretty a prophecy ought to have been as beautiful as a Fairy. But Madame Dudevant, though she takes the utmost pains to represent herself as a poetess, from her cradle upwards,—giving a series of early recollections, the harmony and grace of which must owe something to the retouching of the full-grown artist who narrates them,—seems almost as anxious to disclaim every pretension to personal beauty, as she is to prove the infantine stirrings of fancy, passion, and a rebellious spirit of democratic liberalism.—

During my infancy [says she] I gave promise of being very beautiful,—a promise which I have not kept. This was, perhaps, my own fault; for at the age when beauty comes into flower I already passed whole nights in reading and writing. As the daughter of two beings whose beauty was perfect, I ought not to have degenerated,—and my poor mother, who valued beauty beyond every other gift, often reproached me in simple earnest for it. For myself, I have never been able to constrain myself to care for my appearance. As much as I love the utmost cleanliness, as much have all attempts at effeminacy appeared insupportable.

After a tirade against hats and caps worn for the sake of the complexion, gloves that soften the hands, and shoes that reduce the feet within elfin limits, Madame Dudevant goes on to describe herself, feature by feature,—and says:—

I had only one moment of freshness—beauty never. My features, nevertheless, were well formed, but I never studied how to give them the least expression. The habit which I contracted almost in my cradle of indulging in reveries of which I can give no account to myself, gave me early an air of stupidity. I speak out the word, because during all my life—when I was an infant, in my convent, and in my own intimate family—I have been told that it is so; and it must needs be true.

We cannot help again recalling to the reader how Byron and Rousseau, and other confessing persons, have fancied that there might be a beauty in exaggerating their moral ugliness. Is Madame Dudevant utterly clear of what *Uncle Selby* called "femality," in elaborately dwelling on her want of personal charms? After all, perhaps, Madame de Staël may have been the less weak and womanly of the two, when she so loudly and openly expressed her envy of the dazzling beauty of Madame Récamier. Our authoress is too fine an artist not to know that the really plain and stupid women in her books are dismissed with an epithet, and

not, as here, promoted to the honours of a catalogue of "cheek and lip and eye."—Rarely has coquetry been more solemnly ingenious in its devices and disclaimers.

Nor does the history of her mind and affections, as traced by Madame Dudevant, seem to us more simple and sincere than her highly finished picture of a person which she assures us is wholly unattractive. But she paints characters, and describes scenes capitably, when she has no apology for her own eccentricities in hand—no mystical influence to ascribe to them—no precocious enthusiasm or partizanship to remember. There was enough in the events of her infancy, as well as in her inherited instincts and temperaments, to make any woman conspicuous had she not even been born French and a poetess. Her grandmother, who, she tells us, "loved her father with impassioned jealousy," and set great store by family (!), did as much as her good heart permitted to annul her son's marriage. She got an old libertine *Abbé d'Andrezel* to repair to Paris, with the purpose of trying the question; and, in the hope of procuring evidence that her son had disgraced the Saxe blood by a marriage tending to his ruin, she induced the Mayor of the fifth *arrondissement* to send a spy for the purpose of reporting on the domestic means and habits of the young Dupins. The spy, however, saw nothing to disapprove of—the Mayor counselled the Lady of Nohant to make the best of her son's "bargain," and an adroit introduction of little Aurore to her grandmother, managed much as such a business would be managed in a novel, softened old Madame Dupin's heart, and brought about a recognition, if not a reconciliation. The two women could never become really attached to each other—the one believing in "right divine," as an old Countess should do,—the other standing up for the privileges and pleasures belonging to a child of Paris: a curious compound, so far as we can make out, of fearlessness, frivolity and fierce jealousy. As the 'History' proceeds Madame Dudevant returns again and again to her mother, adding touches and traits to the picture, which confuse it as a whole, without softening outlines too harsh in their first line to be ever obliterated. In spite of the reassuring report laid before old Madame Dupin by the familiar of *M. le Maire*, the household and nursery management of the young couple seems to have been more original than comfortable. Early in the record of it we are introduced to a family friend, whose value and excellence Madame Dudevant assures us are "inappreciable."—

Pierret was the son of a small landowner in Champagne, and from his eighteenth year was clerk in the Treasury, where he always held a very modest place. He was the ugliest of men; but there was a goodness in his ugliness which engaged confidence and friendship. He had a big flat nose, thick lips, very little eyes. His fair hair curled obstinately, and his skin was so absurdly pink and white that he always looked young. * * * He had not the least morsel of what is called *esprit*; but since he judged everything with his heart and his conscience one could ask his counsel in the most delicate affairs of life. * * * His tastes were prosaic enough. He loved wine, beer, a pipe, billiards, dominoes. All the time that he did not pass in our house he spent at the *Cheval Blanc*, a smoking house in the *Rue Faubourg Poissonnière*. * * * With all this he was very nervous, and, consequently, angry and susceptible. * * * There is no imagining the rudenesses and the outbursts which I have had to put up with from him. He would stamp his feet, roll his little eyes, become red, and go through the most fantastic grimaces while he addressed the most violent reproaches to you, in language anything but measured. My mother had the habit of not paying the least attention to these. She contented herself with saying, "Ah! Pierret is in a passion, we shall have some famous-ugly faces;" and on this,

Pierret, forgetting his tragical tones, would begin to laugh.

When Pierret was in the melting mood, and would weep because he fancied himself not sufficiently appreciated, Madame Victoire Dupin would pinch him to make matters right. From the first moment of their acquaintance he seems to have taken his place in the house as useful friend. He kept Maurice Dupin's money matters straight, paid bills for him, and persuaded creditors to wait. He early, too, began to assume authority over our historian—since perceiving that her mother understood little of the duties of maternity, he took the little girl home with him to his own lodging, and weaned her there!—When her father used to ride away to join the army, he would say among other farewells: "Pierret, I recommend my wife and children to thee, and if I do not come back remember it is a charge for life." Persons have hinted, adds Madame Dudevant, that Pierret was too intimate a family friend: but this she does not believe. He subsequently married a general's daughter without fortune, whom her mother spoke of as an estimable person.

When Maurice Dupin was in Spain with Murat, as *aide-de-camp*, his wife became terribly jealous of him. The letters which he wrote explaining the separation as one necessary to his military advancement by no means allayed her suspicions. Join her husband at Madrid she would, though on the eve of becoming a mother again. Pierret packed her and her little daughter up for the journey on the road. Madame Dudevant recollects distinctly meeting the Queen of Etruria and her daughter bound for Bayonne, whither they were hastening to place themselves under the protection of Napoleon.—

This was for me (says she) a tolerably lively sensation—for there were always in my fairy tales Kings and Queens, whom I had fancied to be beings of extraordinary beauty, luxury and splendour. Now, the poor Queen whom I saw wore a poor white dress, scanty, as the fashion then was, and discoloured with dust. Her daughter seemed to be eight or ten years old, and wore the same sort of dress,—both seemed to me very brown and ugly. They had a sad and disturbed air, so far as I recollect,—they had neither suite nor escort, flying as they did, rather than travelling: and my mother remarked in a careless tone, "There's another Queen running away."

More regal impressions were made on the little girl by the palace in which they were installed in Madrid, as belonging to the staff of Murat. The child seems to have attracted his notice, and to have been attracted by him. She called him—still full of fairy lore—*Prince Fanfarinet*. To amuse him she was dressed up by her parents in a hussar uniform, with pantaloons, spurs, sword, sabretash, all in miniature. Thus early did Madame Dudevant acquire that taste for doublet and hose which M. Calamatta of later years perpetuated in his singular *frock-coat* portrait of George Sand. Little Aurore had her Spanish costume, too, in which she danced a baby-bolero. But more painful experiences of Spain are in the 'History' of those days at Madrid; her mother always used to aver that calamities were prepared for them by Ferdinand VII., the Prince of the Asturias. He secretly hated Murat and his officers, and, under the guise of complimentary presents, plotted their destruction. He gave Maurice Dupin the half-wild horse which subsequently threw its rider and killed him. The half-wild woman maintained, too, that her son, who was born shortly after their arrival at Madrid, had foul play.—

My mother pretended that out of hatred against the French, the Madrid surgeon who attended her put out the eyes of her boy. She fancied that she had seen him while she was lying in the exhaustion

which succeeded the paroxysms of child-birth, press with his thumb on the eyes of the infant, and that she had heard him mutter betwixt his teeth, "*This one shall not see Spanish daylight.*"

This horrible idea was probably one of the many hallucinations cherished by one alike quick and ignorant, and who is described as having been able, with or without cause, to work herself up into the most unbridled and bitter frenzy. The poor blind child, however, did not live to know his misery. So soon as Madame Victoire Dupin was able to travel they returned to France. The journey, which is graphically narrated, was a rough one—both children sickened on the road, and shortly after they reached Nohant the boy died. An inconceivable scene followed the boy's death—inconceivable, because it is here dressed up with dialogue, climax of incident, and other romantic effects, such as no actor in it could have recollected, narrated, or set in order. On the night of the infant's burial the husband reproached his wife with the jealousy, which had impelled her to make that journey to Madrid, when her health rendered it so unfit for her to travel. She had thereby, he said, injured their boy. The poor woman, irritated by her distress, dwelt on what she imagined the surgeon to have said; and from the idea of foul play done by him to her baby on its birth, her morbid imagination suggested the more hideous idea of premature burial. She prevailed on her husband to go there and then to the cemetery, and to exhume the infant's corpse. It was brought home to her; she kept it beside her for another day—then she had it buried anew in their own garden, at the foot of a pear-tree. To what purpose has this fantasy of ill-regulated grief been disinterred?—on the "solidarity" theory, to prove that Madame Dudevant has a right by inheritance to the fantastic combinations which she introduces into her fictions?—or from some morbid notion of illustrating the unworldly and impassioned character of her mother? Considered in either point of view, the anecdote becomes repulsive, when published of a parent by a daughter who has prefaced her 'History' by a tirade against indiscreet confession.

A few weeks after this painful transaction Maurice Dupin was killed; being, as we have said, flung from the violent horse which had been given to him by the Prince of the Asturias. This calamity is strikingly described. His mother, who, like other French fine ladies of the olden time, had hardly the use of her limbs, walked out some miles from her home at the dead of the night, uncovered and ill shod, but reached the spot only after life had passed. His wife, in her first paroxysm of despair, vented the exclamation—"And I, who was jealous of him! Well, I shall be so no more!" Tragic poet never devised wilder or more feminine outburst of agony, remorse, and strange security blended. Our historian narrates that it was remembered and repeated in after days, to the disadvantage of the widow, and discusses its real meaning in a manner more critical than filial, even allowing the fullest force of the temptation to prove all her own peculiarities hereditary and inevitable.

For a few years after this frightful catastrophe Maurice Dupin's mother and widow remained together,—bound one to the other by their bereavement, and kept asunder by a rivalry which did not cease because there was no one to choose or to declare whether he loved best his jealous mother or his jealous wife. But the latter, Madame Dudevant frankly owns, was insupportable to live with,—a sort of gifted savage, full of energy, untutored genius, manual dexterity,—one who knew the arts "of a woman of the people," and possessed, in full measure, her foibles. After having enumerated the thou-

sand things which Madame Victoire could do, and did with her hands,—

She was, then, magnificently organized, says her daughter.—“She had so much mother-wit, that when she was not paralyzed by her timidity,—which was extreme in the case of certain persons,—she could be positively dazzling. * * * When thoroughly at her ease, hers was the sharp-cutting, comical, picturesque language of a child of Paris,—to which nothing in the world is comparable. In the midst of all this were flashes of poetry—things felt and said as they cannot be said by people who are aware that they are saying fine things. * * * She was satisfied with her own beauty, without being proud of it; and would say, simply, that she had never been jealous of the beauty of others, finding herself sufficiently well provided in that respect. But in my father's case, she was tormented by the superior intelligence and education which she attributed to the women of the world. * * * She was irascible to the utmost point, and to quiet her it was necessary to feign anger. Grief and patience exasperated her; silence drove her mad,—and it was because I respected her too long that she was so long unjust to me. * * * I have a hundred times seen my mother, outrageous to a frightful pass, suddenly aware that she had gone too far, burst into tears, and raise those whom she had just been trampling under foot to positively adoring her. * * * She had admirable changes of mood, when she was insulting her enemies. If Pierret, to bring her passion to an end, or, more honestly, because he saw with her eyes, chimed in with her maledictions, she would turn suddenly on him—“Nothing of the kind, Pierret,” she would say, “You have no reason. You don't see that I am angry; that I am saying unjust things, and that in an instant I shall be in despair for having said them.” * * * She was as cunning as a fox, and directly afterwards as *naïve* as a child. She lied without knowing it, with the most perfect good faith. Her imagination and the ardour of her blood, perpetually ran away with her: she would accuse one of incredible misdeeds,—and then, all at once, she would stop and say, “But what I am saying is not true! No, there is not a word of truth in it! I have dreamed it.”

Such a tempestuous creature as this could hardly be expected to suit that composed, highly-bred personage, her mother-in-law; especially since, to keep the two asunder, there were meddlers and whisperers, as well as offences of old days still unforgotten, and jealous memories that still rankled. Though Madame Dudevant was “born to music and among the roses,” she must, early in her childhood, have learnt the meaning of such things as discords and thorns. After a few years of painful companionship, the elder lady propounded her desire of taking the sole charge of little Aurore, the younger one being bent on returning to Paris, where her elder child was at school. This transfer, however, was not completed without many struggles on the part of the mother and on the part of the historian, who recalls all that passed in her mind and heart, with the experience of a true artist. The mediator betwixt her mother and grandmother was her uncle, the Abbé de Beaumont, who came to Nohant for a summer, in order to arrange the treaty. The last passages from this family history which we shall paraphrase on the present occasion shall be devoted to the portrait of this sprightly, luxurious man of the old French world.—

He was a genial man—a trifle careless, too, as old bachelors are apt to be—a man remarkable for a ready and fertile wit—at once selfish and generous in character. Naturally sensitive and ardent, celibacy had made him self-engrossed; but that self was so amiable, so gracious, so fascinating, that one was obliged to forgive his not entering into one's troubles to a point at which he would have been unable to divert one out of them. He was the most beautiful old man whom I have ever seen in my life. His complexion was fair and delicate; he had the same soft eyes, regular and noble features, as my grandmother,—but the lines of his countenance were finer; its expression was

more animated than hers. At that period he still dressed his hair in *ailes de pigeon* powdered, and with a *queue à la Prussienne*—wore black satin breeches and buckled shoes; and when he had over his coat his violet silk gown, wadded and quilted, he had the air of an old family portrait. He loved his ease, and kept house with old-fashioned luxury. His table was as refined as his appetite. He was despotic—imperious in words, liberal to weakness in his actions.

We should like to represent, as well as our English enables us to do, Madame Dudevant's capital and richly-finished picture of this luxurious old gentleman's home at Paris,—with his antique furniture—his *gouvernante* who cared for his comforts—his capital Sunday dinners, and his established circle of Sunday-dinner guests,—among these were Madame de Marlière, a philosophical old lady, ugly and queer, who talked incessantly and ate like an ogress (elsewhere commemorated by Madame d'Abrantès in her *Memoirs*), and Madame de Pardaillan, who, not believing in the influence of the music and the roses, prophesied for little Aurore a future in which her chief happiness must lie in the amount of forgiveness which she could bestow on her enemies!—We should like to have also paraphrased the passages in which Madame Dudevant tells us that this charming Abbé uncle sat for the portrait of the *Canon* in her ‘*Consuelo*,’ with exaggerations and improvements. These she substantiates and defends,—warming up as she always warms when some question of Art is discussed, in some eloquent paragraphs. For the last of these, however, we will make room: because it contains truths (and truisms) as generally neglected as if the Author of ‘*Consuelo*’ had only now discovered them for the first time.—

What Lavater says respecting the differences of physical reality is still more true when it is applied to relative verity in Art. Music is not imitative harmony, at least imitative harmony is not music. Colour in painting is only an interpretation, and the exact reproduction of the real tones is not colour. The characters in novels then are not figures copied from existing models. To paint one person, it is necessary to have known a thousand. If the author had only studied a single one, and wished to make an exact copy of him, the portrait would resemble no one and seem impossible.

We must here leave our historian under the tutelage of Madame Dupin; troubled by being made to learn genteel behaviour, and distracted by her preference for the stormy life and companionship of her angry, gifted mother. As the chronicle proceeds, new characters it is to be hoped will appear. The section which we have glanced at in the above is too prolix in its sentimentalities, and will be found tiresome by readers who have less patience with the acts and artifices of the Confessional than the *Athenæum*.

OUR LIBRARY TABLE.

A History of the English Poor-Law, in connexion with the Legislation, and other Circumstances affecting the Condition of the People. By Sir George Nicholls, late Poor-Law Commissioner. 2 vols. (Murray).—The scope of this work is narrow. Sir George Nicholls writes up to his title—a history of the Poor-Law, not of the Poor,—though the one narrative seems inseparably connected, in its historical meaning, with the other. Thus we follow the late Commissioner through a long series of legislative acts, tests, penalties, and modes of relief; but the great human mass affected by these statutes remain in dubious gloom. There is an elaborate enumeration of the devices employed to keep the “common sort” in order, such as whipping-posts, pillories, and death without benefit of clergy; but the character of the poorer classes, and the real vicissitudes of their history, are still left undescribed,—though Sir George Nicholls has compiled two volumes on a subject closely connected with them. His work is, in reality, a legal review, laying open the course of English legisla-

tion, with reference to the maintenance of destitute persons and the chastisement of vagabonds. When, however, historical events, arising out of impulses and resolves on the part of the populace itself, fall into the train of the narrative, they are slightly noticed, and not at all explained. Wat Tyler's movement is glossed over, Walworth's reward is forgotten, and Jack Cade's rebellion remains what it was before, an unwritten page of English history. It is not to be regretted, however, that Sir George Nicholls confined himself, for the most part, to the preambles and clauses of parliamentary acts. Had he diverged more widely from these, and lost sight of his special purpose, incomplete as it was, his book must have been spoiled by a deficiency of critical research, little consistent with its present accuracy of legal reference. A few authorities, all obvious, and some of equivocal value, satisfy him on all questions of a more general nature than those which have formed the peculiar basis of his studies. It results that the work contains matter that will be useful to lawyers, commissioners, and guardians of the poor, and its recital of legislative enactments will spare some trouble to more profound and philosophical writers; while as a history of the Poor-Laws in their extended relations, their origin, their political significance, and their social effects, it can in no way be regarded.

Ruth Hall: a Domestic Tale of the Present Day. By Fanny Fern. (Houlston & Stoneman).—The delicious “*Marry come up!*” of the American dasher, by which the *Athenæum* was some months ago dragged into shame and scolded into silence, does not hinder us from saying that the beginning of ‘*Ruth Hall*’ is more to our liking than any of Fanny Fern's former ruralities; and that, unpleasant as are some of the combinations, it shows a certain power of style which makes us fancy that the Lady might be the Sterne of America, if she would only take to wise ways. But what “a present day” is the one which is here pictured!—a night, call it rather, of hard, hideous, vulgar selfishness, in which everything like domestic trust or tenderness is blotted out, save such as centres in that “bright and particular star”—the heroine herself. Her mother hates her—so does her mother-in-law—her father dislikes her—so does her father-in-law. All four conspire, when she is poor and a widow, to grind her down—to afflict her,—to torment her by forcing her children from her,—to envy and “vilipend” her when she becomes an authoress as famous as Fanny Fern! What is worst, her brother is equally envious, ungenerous and malignant. He is a literary man of pleasure, who has travelled in Europe; and, on his return to the New World, has assumed the airs of an *arbitrator elegantiarum* and a protector of rising genius. When Ruth Hall begins to write, however, he insults her “articles” in place of inserting them in his magazine; telling her that she is fit for no head-work. When she becomes famous—leaping into “sale and profits” as rapidly as, Fanny Fern tells us, she herself has done, this hollow Mr. Hyacinth claims the relationship, and also the merit of having brought her forward! There is more than sentimental misery in this—an appearance of serving up real experiences with a hard and sharp eye to business, which, we doubt not, will sell Fanny Fern's book. Let it be only suspected that a woman is telling her own story in her story, and her readers will be quadrupled;—and scandal will take charge of her literary reputation for better, for worse. In short, as we have heretofore said, we have met few female writers less innocent of wiles and worldly wickedness than Fanny Fern. But she talks about affection, and belief, and nature, and impulse, and free speech, very nearly as bravely as Mr. Barnum talked about his Bible in his wonderful Charlatan's *Vade-mecum!*

A Sketch of the Rise and Progress of Christianity. By Robert William Mackay, M.A. (J. Chapman).—This is a book with which we cannot meddle. The author is of opinion that Christianity has dwindled down to what appears to be “a drivelling, feeble, desultory thing”—“a distorted burlesque of the original, exhibiting itself chiefly in Sabbatarian absurdities, and a crazy infatuation about the

prophecies!" By way of contrast to its present condition, he traces its history down to the time of Wycliffe, with considerable learning, and, as may be supposed from what we have quoted, with abundance of freedom.

History of Christian Churches and Sects from the Earliest Ages of Christianity. By the Rev. J. B. Marsden. Part II. (Bentley.)—The present Part contains complete articles upon the Brownists, the Calvinists, the Coptic Church, the Docetæ, the Donatists, and parts of articles upon the United Brethren and the Church of England. The author displays a generous abhorrence of persecution, very becoming in every man and especially so in an ecclesiastic; but his work is of the same character which we attributed to the former Part. It is full of proofs of haste and want of consideration.

Popular British Conchology. By G. B. Sowerby. (Reeve.)—The name of Sowerby is a guarantee that a book on shells will be well written. Mr. G. B. Sowerby maintains the character of his father and grandfather as a naturalist, and has here produced a very instructive volume as an introduction to the study of shells. We say of shells, because although Mr. Sowerby has, where needful, described the inhabitants of the shells, the object of the work is rather to assist the conchologist than the student of anatomy. This work belongs to Mr. Reeve's illustrated series on Popular Natural History, and is a worthy companion to some of the latter volumes, of the value and interest of which we have spoken when they were published. It will be seen by the title that this work is confined to British shells, and as such will be found more useful for a beginner in natural-history science. It will be found a most convenient handbook at the sea-side, as all the more common shells are not only described, but illustrated. This work will serve as an admirable introduction to the great work on 'British Mollusca,' by the late Edward Forbes and Mr. Hanley.

The Collodion Process. By Thomas H. Hennah. (Knight.)—*The Waxed-Paper Process.* By Gustave Le Gray. (Knight.)—*Practical Photography on Glass and Paper.* By C. A. Long. (Bland & Long.)—Photography has now taken its place among the useful, if not among the fine arts. The beauty and accuracy of the picture produced by it have given it a universal interest, and the facility with which all its processes can be performed has made it a domestic art. The little books, the names of which we have placed at the head of this notice, are published with the object of assisting the amateur in the study and practice of this art. Mr. Long's book gives an account, short but sufficient, of the apparatus and means of producing photographic pictures. The books by Mr. Hennah and Mr. Gray are devoted, as their names indicate, to two particular departments of the art. Those who are engaged in the practice of photography will find useful hints in each of these small volumes, and the price and contents of one and all show that they have been written with the practical end in view of assisting the young photographer.

Ladies of the Reformation. By the Rev. James Anderson. *England, Scotland and the Netherlands.* (Blackie & Son.)—The author has compiled these biographies with diligent reference to all published authorities, even the latest. In this respect he deserves considerable commendation; and it is pleasing to see to what good account he has been able to turn some of the recent additions to our historical libraries. 'The Chronicle of Queen Jane,' published by the Camden Society, has furnished picturesque additions to the biography of Lady Jane Grey, whilst that of the wife of Bishop Hooper has been derived almost entirely from 'The Zurich Letters,' published by the Parker Society. The fault of the book is, that the author is a partizan. He lacks that critical spirit from which historical writing derives almost all its value. All his ladies are not merely beautiful—that is of course—they are faultless. The only one of whom we have seen a recorded failing is the wife of Peter Martyr. She, poor soul, had the misfortune to be "somewhat corpulent," whereupon the Papists wickedly called her "Fustiluggs"—the meaning of which word,

or its connexion with corpulency, we do not pretend to know. But, let it not be supposed that the author's partiality for his heroines leaves his book without the light and shade to be derived from the contrasts which exist in every real human character. If the ladies of the Reformation were super-excellent, not so the opposing Roman Catholics. There is scarcely a wickedness which they are not supposed to have been ready to commit. All varieties of cruelty were amongst their lightest crimes. Some good Protestants think this mode of dealing with their opponents a kind of Shibboleth of their religious profession. In its theological aspect we have, of course, nothing to say to it; but regarded historically, we may point out that exaggerated over-statement of any kind is destructive of *verisemblance*, and therefore fatal to that branch of literary composition. When a biography occurs in which the dreadful Papists are kept in the background, as in the life of Lady Burghley, this author writes as pleasingly as need be; but where, as in the life of the wife of Peter Martyr, to which we have already alluded, and many others, it is necessary to bring the enemy on the scene,—words scarcely seem large enough to express our author's idea of their peculiar atrocity. Anything is readily believed which tells against them, and to be in opposition to the "Roman Moloch" at once constitutes a lady "wisest, virtuous, discreetest, best." With this drawback, the book may be commended as containing a series of popular biographies of more than average merit.

Manual of German Conversation. By Oscar Busch. (Leipzig, Brockhaus; London, Williams & Norgate.)—The plan of this Manual is good, and so is its execution—as far as the German is concerned. The English—though highly creditable to a foreigner, and very superior to what is generally found in such works—is far from what it ought to be. We do not mean to say there are many positive errors in it, but we have met with numerous expressions which lack the *imprimatur* of ordinary usage, the supreme authority in matters of language. In several instances, we have observed that the German might have been translated more literally, the idiom being the same in both languages; while in others the English is too close a rendering to be pure and idiomatic. We are not surprised at this, considering the author is a German; but we certainly do wonder that the necessity of employing two hands upon works in two languages is not more generally felt and acknowledged. The compiler of this Manual deems it necessary to make some sort of apology in his Preface for addressing the English in their own language. He should have dispensed with the necessity for any such apology by securing the assistance of an English fellow-labourer. His work would then have merited unqualified approbation. Even as it is, it may be used to very good purpose. The first part contains a numerous collection of phrases and sentences expressing the simplest ideas, and arranged in portions of convenient length under heads expressive of the leading notions. The same plan is more fully developed in the second part, where are to be found useful vocabularies and a rich store of conversational phraseology suited for all classes and every occasion of ordinary life. A great deal may be learnt from the notes, which explain the usages of particular words with more minuteness than is possible in ordinary grammars and dictionaries; and the index of the leading topics in English and German is a convenient addition.

A Treatise on Greek Tragic Metres: with the Choric Parts of Sophocles metrically arranged. By the Rev. W. Linwood, M.A. (Longman & Co.)—As classical versification has now ceased to occupy the high place it formerly held as a branch of education, it might seem superfluous to publish a treatise like this. But if the practice of writing Greek and Latin verses be unworthy of the attention once bestowed upon it, a knowledge of the metrical principles upon which the ancient classical poets constructed their works is indispensable to a full appreciation of their beauties. Hence, whatever arguments justify the pursuit of classical studies at all will apply in a great measure to the subject of Greek metres; which is here set forth with a degree of systematic

completeness and yet concise simplicity not to be found elsewhere. The different kinds of metre are well explained; and the laws are made to assume a much more scientific form than usual, their mutual dependence being pointed out, and the principles upon which they are based being clearly stated. Practical utility has been the object in view throughout. Hence, points of mere curiosity or doubtful controversy have been passed over, and prolixity in the discussion of the topics introduced has been carefully avoided. The metrical arrangement of the choruses of Sophocles forms a good practical illustration of the theory expounded in the early part of the work.

Mr. J. W. Gilbert, the famous author of 'Logic for the Million,' has favoured the world with a shilling tract, bearing the title *Logic for the Young: consisting of Twenty-five Lessons on the Art of Reasoning, selected from the Logic of the Rev. Isaac Watts, D.D.* The idea of taking Watts as a guide, because he was a favourite with the public a century ago, in preference to modern authorities by whom he has been completely superseded, is well worthy of the distinguished F.R.S. who announces a forthcoming 'Logic of Banking,' but is hardly likely to commend itself to general acceptance. Watts himself is poor enough; what shall we say of him as represented by a writer like the Author of 'Logic for the Million'?—Another shilling volume has been added to Gleig's School Series, from the pen of Mr. Tate. It is an introduction to *Experimental Chemistry*, and will be found of great service to beginners, being precise, distinct, and systematic.—We cannot speak favourably of *Horace: the Whole Works, Satires, Epodes, Odes, and Epistles, translated literally into English, by H. Osgan, LL.D.*—Latin Texts with Notes. *Horatii Carmina; The Odes and Epodes of Horace: with Short English Notes for the Use of Schools.*—*Georgica Virgilii; The Georgics of Virgil, and Minor Poems: with Short English Notes for the Use of Schools.*—*Bucolica Virgilii; The Bucolics of Virgil: with Short English Notes for the Use of Schools.* (J. H. Parker.)—Mr. Parker is supplying a want long felt, in issuing a series of good classical texts, well edited, and in a cheap form. The expensiveness of our school-books is a crying evil which cannot be too soon abated. It is absurd extravagance to put costly books into the hands of schoolboys, to be thumbed and torn to pieces, when cheaper ones would answer every useful purpose just as well. In this respect, our neighbours on the Continent are far more rational than we are. We look with satisfaction upon Mr. Parker's efforts to bring about an amendment. Though we think it would have been better to announce the editor's name, we willingly bear testimony to the ability with which he has executed his task, and have much pleasure in recommending these Texts as suitable for school purposes. The notes contain sufficient information, without affording the pupil so much assistance as to supersede exertion on his part.

LIST OF NEW BOOKS.

- Amy Wilton, by Miss Worboise, 2nd edit. 3s. 6d. cl.
American Almanac, for 1855, crown 8vo. 5s. swd.
Brodhurst (B. E.) On Lateral Curvature of the Spine, cr. 8vo. 3s.
Brougham's Lives of Philosophers of the Time of George III., 5s.
Bunn's (Rev. H.) Vampire of Christendom, 12mo. 3s. 6d. cl.
Burke's (Sir B.) Peacocks, &c., corrected to 1855, imp. 5s. 38s. cl.
Charles X. H. par Voltaire, nouvelle édit. par Cuvier, 12mo. 4s. roan.
Christian Retirement, by T. S. B. Reade, 17th edit. 12mo. 6s. cl.
Chapman's Everyday French Talk, 12mo. 2s. cl.
Cumming's (Dr.) Signs of the Times, new edit. 2s. 6d. swd.; 3s. 6d. cl.
Fishbourne's (Capt.) Impressions of China, crown 8vo. 6s. cl.
Garner's (Robert) Eutheraia; or, an Examination of the Principles of Medical Science, 8vo. 8s. cl.
Gurney's (J. H.) Historical Sketches, Second Series, 'St. Louis and Henry IV.,' 12mo. 6s. cl.
Gwen, or the Cousins, by A. M. Goodrich, 2 vols. 12mo. 9s. cl.
Ida May, Illustrated Edition, 3s. 2s. 6d. cl.
Lardner's (Dr.) Electric Telegraph Potentized, 12mo. 2s. cl. limp.
Macdonald's (G.) Glennings for the People, 2s. 6d. cl.
Mammon, a Novel, by Mrs. Gore, 3 vols. crown 8vo. 31s. 6d. cl.
Massey's Hist. of England during Reign of George III. Vol. 1, 12s.
Napier's (J.) Manual of Dyeing, crown 8vo. 7s. 6d. cl.
Notes and Queries, Vol. 10, 4to. 10s. 6d. cl.
Parlour Lib., 'James's The Step-Mother,' 1s. 6d. cl.
Parry's (Miss) Sketch of the British Church, 18mo. 2s. cl.
Railway Lib., 'Lytton's Disowned,' 1s. 6d. bds.
Scott's (Sir W.) Life of Napoleon, new issue, Part 1, 8vo. 1s. swd.
Speeches of British Statesmen, during the Thirty-nine Years' Peace, First Series, 3s. 6d. cl.

THE SMITHSONIAN INSTITUTION.

A controversy has been raging with some violence for a considerable time in America, which has at length been brought to a public issue by the introduction into Congress of a resolution of inquiry into the management of the Smithsonian Institution, and into the propriety of putting an end to its existence, and returning the fund to the heirs of the founder. Startling as such an announcement must at first appear, it becomes none the less remarkable when we examine the history of the Smithsonian fund, and of the noble Institution which has been founded by it, and consider the services it has rendered, during its brief career, to the cause of knowledge, as well as to the literary and scientific reputation of America.

The founder of the Smithsonian Institution was an Englishman. Dr. Henry, the Secretary of the Institution, in a lecture before the American Association for the Advancement of Education, gives the following brief outline of his history and character.—“Smithson claimed to be of noble descent; and in his will declares himself the son of Hugh, first Duke of Northumberland, and of Elizabeth, niece of Charles, the Proud Duke of Somerset. He was educated at Oxford, and paid particular attention to the study of the physical sciences; was reputed to be the best chemist in the University, and was one of the first to adopt the method of minute analysis. As an example of his expertness in this line, it is mentioned that on one occasion he caught a tear as it was trickling down the face of a lady, lost half, examined the remainder, and discovered in it several salts. He made about thirty scientific communications to different Societies, principally on chemistry, mineralogy, and geology. His scientific reputation was founded on those branches, though, from his writings, he appears to have studied and reflected upon almost every department of knowledge. He was of a sensitive, retiring disposition—passed most of his life on the Continent—was never married—appeared ambitious of making a name for himself, either by his own researches or by founding an Institution for the promotion of science. He declares in writing, that though the best blood of England flows in his veins, this avails him not, for his name would live in the memory of men when the titles of the Northumberlands and the Percys are extinct or forgotten. He was cosmopolitan in his views, and declares that the man of science is of no country—the world is his country and all men his countrymen. He purposed at one time to leave his money to the Royal Society of London for the promotion of science; but on account of a misunderstanding with the Council of the Society, he changed his mind, and left it to his nephew; and, in case of the death of this relative, to the United States of America, to found the Institution which now bears his name.”

Smithson died in 1829; and the amount of the property of which the American Government became the trustee was about 100,000*l*. The language of the will by which this magnificent bequest is to be controlled is clear, concise, and simple:—“To found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men.” This is all in the way of suggestion or direction that the remarkable document contains.

The United States Government accepted the trust; and the money was secured and deposited on the 1st of September, 1838. A portion of the fund was afterwards invested in State securities, and lost through their repudiation; but the Federal Government made good the deficiency, principal and interest, and, after eight years of controversy as to the character of the proposed Institution, passed an act for its establishment on the 10th of August, 1846.

And, now, when the dispute was supposed to have been finally settled, and after eight other years devoted to the erection of costly buildings and the perfecting of the organization, and just when America and the world are beginning to taste the rich fruits, not less precious for being so long delayed, an onslaught is made upon the

management,—the cry of “favouritism” and “corruption” is raised,—the old issues are sought to be re-opened,—and the question is turned into a political and personal controversy; while some go so far as openly to propose to throw away the labour of so many years, and return the whole fund to the heirs of the munificent testator.

It is with profound regret that we see the career of an Institution of so much promise threatened with a fate so unworthy of its founder and of the nation that has solemnly undertaken to carry out his design. As Englishmen, we feel that we have a right to express this regret, because the bequest is English, and was once intended for an English institution; as fellow workers in the field of literature and science, we are included in the benevolent scope of the testator's intentions, and are entitled to demand that they shall be faithfully carried out.

In accepting the trust proposed by the will of Smithson, the self-imposed duties which devolved upon the Government of the United States were in no respect different from those which belong to trustees in ordinary cases. The Government was just as fully bound, in honour and in law, to carry out the intentions of the testator in their true meaning and spirit as a private trustee would have been; and the same rules of interpretation and construction apply to the words of the will as if the money had been left for a private purpose. The American Government has no right to divert a shilling of it from the legitimate purposes of an Institution “for the increase and diffusion of knowledge among men”; and the language of the will is the only proper guide in interpreting the acts of Congress relating to it.

Few and clear as are the words in which the bequest is made, it required, as we have seen, many years to settle their meaning, or rather to appoint a competent body of interpreters with power to act upon their convictions; for the Act of 1846, when its provisions are carefully examined, will be found to amount to little more than this. We have examined that act with care, as well as every other act relating to the Institution, and speak from the book, when we declare that there is little in them to prevent the Governing Board of “Regents,” as they are styled, from carrying out the will of the testator according to their own views of its meaning. The act requires a building, but does not say how much it is to cost,—it prescribes a library but sets an *upper* limit only to the sum to be devoted to it,—the act bestows a museum and provides for its increase, but makes no apportionment of the fund for its maintenance. To the extent to which these requirements involve expense, they subtract from the income of the fund left to the disposal of the Regents; but they do not bind them to any specific amount of action with reference to the objects named; while the 9th section of the act especially bestows upon them power to embrace other objects,—in short, to use the remaining income of the fund in any way they may deem most in accordance with the will of Smithson. This section is as follows:—

“Section 9.—And be it further enacted, That of any other moneys which have accrued, or shall hereafter accrue, as interest upon the said Smithsonian fund, not herein appropriated, or not required for the purposes herein provided, the said managers are hereby authorized to make such disposal as they shall deem best suited for the promotion of the purposes of the testator, anything herein contained to the contrary notwithstanding.”

This clause gives to the Regents power to dispose of the entire balance of income remaining after the expenses of the library and museum have been paid (the proportion and amount to be expended even on those objects being, as we have seen, left to their discretion) in any manner they may consider in accordance with the testator's purpose.

The intention of Congress seems to have been to get rid of an embarrassing controversy, by referring it to the judgment of a competent board, with power to act upon their own decisions, binding them only by the merest outline of a plan. The operations, then, of this board are just as much sanctioned by Congress when they extend beyond

the direct provisions of the act, as when they confine themselves to the specific objects therein mentioned. As the act authorizes them to provide for objects not named, it necessarily sanctions the objects thus embraced. And here lies the very gist of the present controversy; for the party that would overturn the present plan profess to rely upon the act of Congress rather than the will of Smithson, claiming that the Regents have exceeded their power in embracing objects not specified in the act, and therefore, as they contend, not sanctioned by law. They evidently wish to excite the pride of Congress in opposition to the Regents, by representing the present plan as adopted in contempt of the legislative authority; while, on the other hand, the supporters of the plan rely upon the wise latitude in the wording of the law, and the liberal discretion allowed to the Regents.

It was fortunate for the interests of knowledge that this discretion was allowed, for it resulted in the adoption of a Programme of operations which for precision and scope commands our approval. Liberality guided by reason educed from the words of the bequest a fullness of meaning which would have satisfied Smithson himself. Nothing narrow, nothing local, nothing exclusively American was allowed to be held in those cosmopolitan words. Every one of them received its most comprehensive and liberal interpretation. “Knowledge” was limited by no speciality, but allowed to comprehend the whole of what is *knowable* by man in the domains of literature, science and art. To “increase knowledge” was interpreted to make actual additions to the sum of the known. To “diffuse knowledge” was held to be, to disseminate among all nations the new truth thus discovered; and, finally, the word “men” was decided to embrace the entire human family.

Upon an interpretation thus liberal was based a plan carefully considered and comprehensive, but adopted with caution and only provisionally. It was soon evident that the objects not named in the act, would require a larger share of the fund than they who were bent upon having a large library and museum were willing to grant; and here arose an early occasion for a compromise of opinion, which resulted in an agreement that half the income should be devoted to the local objects of a library and museum, while the remaining half was given to the more active and cosmopolitan operations. Such a division was not required by the act, and could at any time be altered at the will of the Regents. As usual with compromises, the arrangement suited neither party, and both parties are now engaged in efforts to set it aside, and secure a larger share of the income for their favourite objects. The controversy waxes warm and threatens the destruction of the Institution.

Should the local policy prevail, we shall have a national library and museum of the United States owing their establishment to the munificence of a foreigner,—whose funds were perverted from their legitimate objects for this purpose, and whose countrymen, in common with their fellow “men,” are thus cut off from the benefits he trusted American honour to secure to them.

Proverbially sensitive to the opinion of other nations, the Americans can hardly, we suppose, be aware of the favourable influence the Smithsonian Institution has exerted upon the European reputation of their country, or they would pause before resigning it to the hands of its enemies. Its ‘Contributions to Knowledge,’ creditable as well for the character of their matter as for the beauty of their typographic dress, are distributed by a well-ordered system of exchanges to every important scientific and literary Institution in Christendom, and have not been confined thus far to any special department of knowledge. They bear testimony to the zeal and ability with which all branches are being cultivated in America. No copyright in the publications is secured, and they are thus thrown freely open to all who may wish to use them as materials for more popular works.

The latest list in our possession shows, that thus far additions have been made to knowledge by the publication of researches in the departments of Astronomy, Bibliography, Botany, Chemistry, Comparative Physiology, Electricity, Entomology,

Ethnology, Geology, Ichthyology, Language, Meteorology, Physique, Physical Geography and Terrestrial Magnetism. The 'Contributions' on these subjects occupy, besides several octavo volumes, four imperial quartos of 350 to 559 pages, the mechanical execution of which is unexceptionable and even luxurious.

Each paper or work has been examined and approved by a commission of competent judges, and decided to be an actual addition to knowledge.

We cannot but think that researches such as these, presented in such a form and with such a sanction, distributed to the men of every land best able to appreciate their worth, and to draw from them those beneficial results which are sure eventually to flow from new truth however abstract, greatly outweigh, as agencies for increasing and diffusing knowledge among men, anything to be anticipated from the establishment at Washington of a great library and museum, useful as these might no doubt be within the narrow circle of that capital. The history of the British Museum ought to warn the friends of the latter scheme, that no limited private bequest, however magnificent, can provide adequately for such an establishment. If the American Government is not yet willing to make the necessary provisions for the national wants in this respect, it is an evidence that the want is not yet sufficiently felt by the people who control the Government. None but government resources liberally applied can give America a worthy national library and museum. The income of Smithson's bequest—some six or eight thousand pounds—would, in a very few years, be inadequate even to provide shelter and care for the collections that would result from its application to such purposes. When this point was reached, there would be an end to all progress, and the necessity for Government aid, which would then become imperative, would destroy the private and personal character of the Institution. Smithson's share in it would soon sink into insignificance beside the larger contributions of Government. The establishment would lose its identification with the original bequest, and the very name, to perpetuate which the Institution was created, be forgotten on the spot of its origin.

If a result so much to be deprecated shall actually come to pass, we may derive a melancholy consolation from the philosophic reflection with which Dr. Henry seems to anticipate it:—"If," says he, "the Institution be destined to a change of policy, what has been well done in the line we are advocating can never be undone. The new truths developed by the researches, originated by the Institution and recorded in its publications; the effects of its exchanges with foreign countries and the results of the cataloguing system can never be obliterated: they will endure to all coming time. Should the Government of the United States be dissolved and the Smithsonian fund dissipated to the winds, the 'Smithsonian Contributions to Knowledge' will still be found in the principal libraries of the world—a perpetual monument of the wisdom and liberality of the founder of the Institution, and of the faithfulness of those who first directed its affairs."

FOREIGN CORRESPONDENCE.

Naples, Jan. 8, 1855.

Of literary progress in connexion with Naples, I cannot speak. The reverse of this is too true; and I cannot better serve the cause of social improvement than by holding up to public attention the checks which from time to time are put upon it. One merit at least this Government possesses, which is that of consistency. For, with a perseverance worthy a better cause, it sets its face against all expression of thought, and, if possible, would annihilate Thought itself—continually is it firing away its pellets against some imaginary monsters, yet with so little effect that new visionary enemies constantly spring up, and the contest never ceases. Indeed, there is too much reason to fear that another "old woman" here in the far South is, like Mrs. Partington, engaging in a hopeless task, for as fast as one wave of thought retires,

others come bounding and rushing in. There has been a series of such Partington efforts within the last few weeks. First came the decree prohibiting the introduction of all Italian papers. A decree purely ridiculous, for, with the exception of the Piedmontese papers, there is not one which might not be much more advantageously used in a grocer's shop. I have seen several specimens of these recently; the proportions of which are about the size of a small sheet of writing paper, and whose most striking piece of information is, that his Imperial and Royal Highness the Duke, or Grand Duke, of — is well. Then an epithalamium on some newly married couple meanders side by side with a charade. The success of a new *figurante* is trumpeted forth with as brazen a throat as would be the fall of Sebastopol. Perhaps, as a *salsa piceante*, may be thrown in the last Russian despatch,—and all is washed down with some very diluted notices, of a venerable antiquity, from the revolutionary west. Yet such are the newspapers which it hath seemed good to Mrs. Partington to prohibit from the Kingdom of the Two Sicilies. The fact is, that it is not the paper which is feared so much as the habit of reading and of inquiry. Curiosity, if once awakened, the Government knows has no bounds,—and hence it must be suppressed directly. So the good old lady takes her mop, and, with a preliminary swing over her shoulder, attempts to sweep out the intrusive waters. One concession, however, has been made to an almost public demand, and the prohibition has been withdrawn as regards the *Corriere Mercantile* of Genoa, and through that some rays of light are permitted to struggle in from the outer world upon this world of darkness. It may not be taken in, however, by private persons. The next Partington effort was the attack on the Jesuits for an article which appeared in the *Civiltà Cattolica*, and which led to a suspicion that the Fathers of Jesus, above all men, were infected with liberal opinions. This venerable body, wise in their day and generation, have found it prudent to conciliate, and Government has sung *Pax vobiscum!* Like the crab in a storm, they have crept under the rock for shelter, ready to dart out and take their revenge when the waters are calm. I do not allude to these events under their political aspect, but simply as parts of that system which is practised here for the suppression of all thought and opinion. So much for the efforts to keep the channels of thought pure and undefiled, or rather to dam them up. The last attempt of the kind has been to chasten and purify the moral sentiments of the people. There is a publication here, little in every respect, rejoicing in the title of the *Journal des Demoiselles*, and it has had a very extensive circulation, as who could doubt who knows anything of the female mind of Naples? A sentimental story, a string of verses, a charade are amongst the serious matter which adorns its pages, and which is *sans reproche* in the eyes of even our high moral censors; but, then, it treated of the fashions and illustrations of the last new bodice, and of walking dresses and evening dresses, and all the other mysteries of a lady's toilette; the illustrations were considered as offending too much against delicacy, so that the paternal Government, anxious for the morality of its people, interfered as usual with prohibiting. It reads like a burlesque, but it is no less true, that the *Journal des Demoiselles* was forbidden to be circulated until it had been expurgated and reformed. The dresses were to be drawn higher up, and if sleeves were painted down to the elbow, too nice descriptions of the figure were cut out; and ladies and milliners are in despair; but public morality has been justified. The consequence is, that the subscribers have fallen off, and the *Journal* is dying by inches, for these moral reformations have destroyed its utility. As I have before observed, the Government is only consistent with itself, as every one must admit who remembers the order to the Ballerine to wear blue or green trousers, instead of flesh-coloured, and the indignant rejection of anatomical works at the Custom House which contained prints of too purient a character.

OUR WEEKLY GOSSIP.

WE learn that the library of Dr. Routh, the late President of Magdalen College, is to go to Durham. By a deed of gift, made two years ago, it was conveyed to the Warden, Masters, and Scholars of the University of Durham. The library is said to comprehend nearly 20,000 volumes.

The following letter, on the subject of Copyright in the Australian Colonies, and the necessity which exists for an immediate organization of an authors' and publishers' committee to see into and redress the wrong there inflicted on literary interests, tells its own tale:—

35, Lower Sackville Street, Dublin,
Jan. 17.

The subject of the actual working of the Copyright Law in Australia and our other Colonies is one of considerable importance as affecting the interests of English publishers; for if it is the case, as stated by Mr. Howitt, "that it is not likely that any law in any of our Colonies will in any degree prevent the freest and fullest circulation of such editions," then the result will be that a market, likely to be always increasing, will be closed, and perhaps closed for ever, against English editions of many works; for it is not to be expected that booksellers in Australia will continue to order English editions, if American editions are allowed to be imported for sale at half the price of the English editions. It is, doubtless, the fact that these American reprints have been introduced into Australia and advertised in the Australian papers; but it does not follow that this should continue, for the Copyright Law extends to the Colonies, and surely no Colonial enactment can supersede Imperial law (no local enactment of this kind exists in Australia). It is, however, desirable that English publishers should come forward in defence of their own property; and when this is done, it will secure the desired result. Mr. Howitt's letter would leave the impression that there is no use in any effort of this kind; but this is surely a mistaken idea, for the Custom-House officers and other authorities in Australia are ready enough, when called upon, to enforce the Copyright Law. This is proved by an extract from the *Empire*, Sydney newspaper, of the 25th of May, 1854, which informs us, that "about seven or eight months since, a respectable Sydney firm imported a considerable number of American pirated editions of English authors. In the course of business they offered the invoice for sale to Mr. Piddington, bookseller of this city. He not only refused to purchase, but explained to them that they were infringing the Copyright Law, and pointed out the penalties they would incur if the books were sold. He also called the attention of the Collector of Customs to the subject; but, in the course of the inquiry, it was ascertained that the official list of Copyright works in possession of the Custom House was slightly imperfect; and some difficulty also arose in proving the Copyright character of a few well-known works. Eventually the books alluded to were re-shipped to America; but Mr. Piddington advised the publishers of the books not to be found in the official Sydney list, of the deficiency, and they immediately communicated with the London Board of Customs upon the subject, and received the following satisfactory letter in reply from the Secretary, which we subjoin. It will be seen that in New South Wales the Imperial Copyright Law will in future be strictly enforced." The letter follows.—"Custom House, London, 22nd February, 1854.—Gentlemen,—The Chairman having laid before the Commissioners of Customs your letter of the 12th inst., inclosing a copy of a communication from Mr. Piddington, of Sydney, stating that he had recently great trouble in preventing the sale of a large importation of pirated American reprints of British works, among which were Macaulay's 'History of England,' McCulloch's 'Dictionary,' and Ure's 'Dictionary,'—I am directed to acquaint you that, the Commissioners having caused inquiry to be made on the subject, it appears that the three works referred to by your Correspondent are duly registered, under their proper titles, in the list of Copyright works published under the provisions of the 63rd section of the 8th and 9th Vict. cap. 86, and former laws, and which list has been forwarded to Sydney. I am, at the same time, to acquaint you that the Commissioners have caused copies of your communication and its inclosure to be transmitted to the Comptroller of Customs and Navigation Laws at Sydney, and have directed that officer to communicate, if necessary, with the Colonial Government, with the view of obtaining the assistance of the local authorities, should occasion require it, in giving effect to the provision of the Imperial Law bearing on the subject. (Signed) H. Maclean. To Messrs. Longman, Brown & Co."—The preceding evidences no desire on the part of the authorities to shut their eyes to the introduction of these reprints; and it is to be noticed as indicating public opinion, that the newspaper mentions with satisfaction that "the Imperial Copyright Law will be strictly enforced." It is true that the leading newspaper in Melbourne openly advocated and recommended the extensive importation of these American reprints, and had several articles on the subject, appearing to be possessed with the idea that British law could be easily evaded, for he observes, "that it is an infringement of the law cannot be denied"; but that, he says, "it is impossible to check it at the Custom House." The views of the newspaper editor were replied to, in his paper, by a leading bookseller in Melbourne, who advocated the rights of English publishers, and in his reply observed:—"It is, therefore, useless, and worse than useless, to recommend the breaking of the law, as if it could be done with impunity at the very time when agencies are at work, which, either immediately or in a very short time from the present date, will insure the punishment of all offenders." The state of things described by Mr. Howitt as existing in our Colonies generally is, I

dare say, attributable in a great measure to their distance from us, and consequent comparative unacquaintance of the English publishers with the extent to which this piratical system is carried, whilst the lists of Copyright works existing at our Colonial Custom Houses appear to be somewhat imperfect. The remedy for these things appears to be an organization of English publishers for the protection of their rights in our Colonies, and for an immediate action for every breach of the law. The Americans have no more right to pour their piracies into our Colonies than into England:—they do not attempt it in England, because they know that immediate punishment would follow; and yet the law which prohibits in England is of equal force in our Colonies. In justice to our Colonial booksellers, some such organization is required,—for how can he sell his English Copyright stock in the face of these inferior, yet cheaper, American piracies? and if no remedy can be applied, and no law can prohibit, then will the Colonial bookseller, however reluctant, be forced to go into the sale of American reprints, and thus narrow his sale of English books. But there is the remedy, and there is the law. Yours, &c.,

WILLIAM ROBERTSON.

The final award has been made in the competition for the Burnett Prizes. On opening the envelopes, the successful competitors were found to be, for the first prize, the Rev. Robert Anchor Thompson, Louth, Lincolnshire; and for the second, the Rev. John Tulloch, Principal of St. Mary's College, St. Andrew's. There were 208 treatises lodged. The judges were, Profs. Baden Powell, Henry Rogers, and Mr. Isaac Taylor. They were unanimous in their judgment. The sealed envelopes were opened in the Town Hall, Aberdeen, by Mr. John Webster, advocate, in the presence of the other trustees and a large assemblage of the principal citizens.—To this information Mr. Webster adds in a note:—

42, King Street, Aberdeen, Jan. 24.
The report and decision of the judges have already appeared in the *Times*, and will be published in your advertising columns on Saturday. It will be seen, that besides merely discharging the letter of their instructions by selecting the two best Treatises, they have, in the spirit of justice and encouragement to others, pointed out such of the other Essays as they consider entitled to marked praise. The Trustees of Mr. Burnett are not at liberty to open the sealed envelopes corresponding to these latter Essays, containing the authors' names; but it will give us great pleasure, and I am aware, be generally gratifying, if the writers shall authorize us to do so, and to publish their names in connexion with the Report. The judges have also very kindly complied with the request made to them by the Trustees, of furnishing us with their views as to the advantage of an alteration in the present plan of the competition. This was prescribed by the founder himself eighty years ago; but the funds as well as the subject, have since grown so much, that, by the end of the next forty years, both will be too large for one or even two writers, however able. I may venture to say that the Trustees will very soon take up the subject of the proposed change, and endeavour to mature a scheme for the bestowal of these great prizes, by which the benevolent designs of the testator may be better answered than by an adherence to the bare framework of his own plan. The consent of Parliament must, however, be obtained for any such deviation.—I am &c.

JOHN WEBSTER.

Still life is no longer the characteristic of the Turkish Exhibition. The interesting illustrations of Oriental manners gathered together at Hyde Park Corner have found an able expositor in Mr. Knight,—who last Saturday began to lecture on Turkey and the Turks. Mr. Knight, we understand, has lived in the East, and records his personal experience and convictions in his lecture.

Among forthcoming sales of literary interest are—"The small, but select Library of a gentleman," which contains a good collection of Prynne's Pamphlets, in forty-two volumes,—various Shakspeariana,—Howet's *Londinopolis*,—a first edition of *Paradise Lost*,—and a first edition of Milton's 'Readie and Easie Way to Establish a Free Commonwealth,' with manuscript corrections—"supposed to be in the poet's autograph," adds the Catalogue:—and a "Collection of autograph letters and other curiosities of literature, the property of a well-known collector," which contains, among other MSS. of Sir Walter Scott, the original MS. of *Kenilworth*,—many autograph letters and poems in the handwriting of Burns, including the *Cotter's Saturday Night*,—books with the autographs of Pope, Johnson, Cowper, Burns and Boswell,—drawings by English artists, including the original drawing, by Stothard, for Chantrey's *Sleeping Children*,—autograph letters of Akenside, Shenstone, Charles the Second, Lord Clarendon and others,—MSS. by Oldys,—some prints and books, from Strawberry Hill and the library of the late Mr. Southey,—together with a collection of original papers con-

nected with the theatres of London, from 1630 to 1745.

The Committee of the Surrey Archæological Society has issued the first Annual Report—a brief document, reporting solid, if not brilliant, progress. Ninety-one members have been added to the Society, raising the list to 391. Two general meetings have been held, with success. Progress, we learn, has also been made in the formation of a library and museum.

The Society of Arts, active in so many good works, have appointed a Committee with the special aim of securing the material means for a vast movement of our artizan classes to and from Paris during the approaching summer,—and this Committee announces that "cheap trips on an extensive scale to and from Paris, during the period of the Exhibition, at low fares, have been already organized." We are happy to re-state the fact, for the benefit of those to whom time and preparation are needful, when a journey to a foreign capital is the subject of consideration. The Committee, we believe, is engaged in promoting arrangements for boarding and lodging the excursionists in Paris during their stay there, with interpreters, guides, &c., on reasonable terms. As soon as the Committee is in possession of the actual terms on which the service can and will be performed, no time will be lost in making these known to the public.

An important Society has been recently established in Paris, under the title of "*Société des Archivistes de France*," which has for its object the examination of all works, printed and manuscript, relating to general history, and the biography and genealogy of distinguished or remarkable families and individuals. It is intended to form a collection of archives, drawn from the best sources, which will be accompanied by elaborate indices. As such an undertaking cannot fail to be useful to the historian and biographer, we may render a service by adding that the present *locale* of the Society is No. 91, Boulevard Beaumarchais, and that the President and Secretary are the Duc de Rohan-Vendadour and Le Vicomte Ponson du Terrail.

Such of our readers as take a special interest in the progress of African discovery will be glad to hear that the Geographical Society of Paris, on the recommendation of our old correspondent M. d'Abbadie, has offered the following prizes:—A medal, value 500 francs, to the traveller who shall have navigated on one of the great branches of the White River for a distance of 120 geographical miles, reckoned in the bed of the current, and higher up than 44° 10' N. lat., or to him who shall have examined the river for the same distance on either bank. An account must be given of the voyage, and the distance travelled be established by astronomical observations of latitude and longitude. A medal of 100 francs to the author of measures serving to establish near Kartum the comparative rate of current of the White and Blue Rivers. A similar medal for the comparative currents of the Saubat and the Keilak at their mouths; and a third medal of the same value for ascertaining the current of the river above the Lake Nu, in 9° of latitude.

The death of Dr. Warneford,—the munificent patron of educational and other charities,—claims a passing notice in a literary journal;—as does also that of M. Merle, the foreign editor of *Galignani* and Paris Correspondent of the *Globe*.—From America we hear that Mr. North, author of 'Anti-Coningsby' and a contributor to our periodical literature, has died by his own act. Mr. North went to America three or four years ago.

The German journals are full of reports concerning the new tragedy, 'Der Fechter von Ravenna' (The Gladiator of Ravenna)—which, after having been represented with success at the Vienna "*Burghtheater*," as our readers have been told, is now making the round of the German theatres, and becoming more and more the subject of enthusiastic praise on one side, and severe censure on the other. The drama must be the work of a true poet; and the theme being patriotic, the commotion about it (especially in times of dramatic dearth and strong national feeling like the present) is easily explained. A great deal of the interest

attaching itself to the play appears to be owing to the circumstance, that it found its way to publicity in a rather mysterious manner,—that it is what is called "*eine Findlings-Tragödie*" (a foundling tragedy),—and that up to this very moment the name of its author has not transpired. There are, of course, many guessers, but none of them, it seems, has hit the truth. Herr Grillparzer and Count Münch Bellinghausen (Herr Friedrich Halm) have declined the honours of its authorship most decidedly; after them Dr. Vincenz Weber and Dr. Guido Mosing (two Vienna poets little known beyond the Austrian frontiers) have been mentioned, and the last conjectures fix upon Herr Moritz Heydrich (a young poet, living in the vicinity of Dresden) and Herr Max Maria von Weber, son of the late musical composer.—The plot of the drama is briefly this:—Thusnelda, the widow of Arminius, led captive to Rome by Tiberius, has given birth to a son, who is torn from her when still an infant, and brought up as a gladiator in the amphitheatre of Ravenna. Having grown up to youth, he, with other gladiators, is called to Rome, to partake in the bloody games of the Circus. At the same time, Merowig, a friend of the dead Arminius, succeeds in penetrating into Thusnelda's presence. He comes as ambassador of the German tribes, who summon the son of Arminius to return to his country,—to place himself at their head,—and, in confederation with them, to shake off the hated Roman yoke. Too soon, however, it is seen that the hope with which this message inspired Thusnelda is nothing but a vain delusion. Grown up in vulgar company, her son Thumelicus is not able even to understand the words with which she tries to inflame him. Brought up a gladiator, he will remain a gladiator. The contempt shown by Thusnelda for his calling serves but to increase his stubbornness and his passion. He abuses Germany, and does not conceal that he is ashamed to be, by his birth, a German barbarian. Meanwhile, Caligula, in his sanguinary madness, is seized with a whim which promises him a double enjoyment: he commands Thusnelda, in her princely robes and the wreath of oak-leaves in her hair, to appear in the Circus, there to see her son, in the rude garb of his fatherland, fight—bleed—and die. Thus, in a horrible game, the fall of Germany and the triumph of Caligula are to be symbolized. In vain Thusnelda conjures her son to avoid the ignominious combat by a quick escape to Germany. Thumelicus remains unshaken; what, in his mother's eyes, is infamy, is to him, after his gladiator's notions, honour. Still Thusnelda hesitates; only one thing she knows with irrefutable certainty, and with heroism she pronounces it:—

Die Schande Deutschlands darf mein Sohn nicht sein!
(His country's shame my son shall never be!)

When there is no other way left, she does not recoil from the most dreadful expedient: she kills first her son and then herself. For Caligula, also, the day of retaliation is drawing near. A conspiracy against him has been set on foot, and the last verses of the tragedy foretell that the very next morning Rome is to be delivered of its tyrant. The idea of a great and glorious Germany, and a spirit of deep sadness about the internal dissensions which stand in the way of the Germans taking the rank due to them among the nations of Europe, are said to pervade the whole drama. No wonder, just at this time, that it excites a great and intense interest, and that many of its pithy speeches find an immediate echo in the political situation of the day. Time will teach best, whether it has merits besides, and is really made of the proper stuff to rank henceforth with the classical works of German dramatic literature. Let us hope that it be so.

THE WINTER EXHIBITION OF CABINET PICTURES, SKETCHES, and WATER-COLOUR DRAWINGS OF THE BRITISH SCHOOL, is NOW OPEN, at the GALLERY, 12, Pall Mall, Daily, from Ten in the Morning until Five.—Admission, One Shilling. Catalogue, 6d.

PHOTOGRAPHIC SOCIETY.—THE SECOND ANNUAL EXHIBITION OF THIS SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—THE CAVALRY CHARGE at BALAKLAVA is now added to the DIORAMA illustrating EVENTS of the WAR. The Lecture by Mr. Stocquer, including Description and Diagrams of Eastons, Gabions, Fascines, &c. Daily at 3 and 8.—Admission, 1s, 2s, and 3s.

THE ARCHITECTURAL EXHIBITION and COLLECTION of MANUFACTURES connected with ARCHITECTURE is NOW OPEN, from 9 till 4, at the Galleries of the Society of British Artists, Suffolk-street, Pall Mall East. Admission, One Shilling; Catalogues, Sixpence.—And in the EVENING (except on Saturday) from 7 till 10. Admission, Sixpence.

WILL CLOSE February 24, and all objects exhibited must be removed on the 26th. JAS. FERGUSSON, F.R.A.S. } Hon. Secs.
JAS. EDMESTON, Jun. }

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening. CYCLOPAMA, Albany Street.—NOW OPEN, with a Colossal Diorama of the City and Bay of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the great Eruption of '79, and present state of the Excavated City. Painted by Mr. J. M. NEVIN, from Sketches taken by himself in 1832. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1s.; Children and Schools, half-price.

Now exhibiting at 57, PALL MALL.—A MUSEUM of MEXICAN ANTIQUITIES, illustrative of the Mythology, the Religious Rites, and the Sculpture of the Toltec and Aztec Nations, as shown in figures of their Idols, Pontif Chieftains, Cinerary and Libatory Vase, Sacrificial and Musical Instruments.—Admission, One Shilling.

LOVE'S NEW ENTERTAINMENTS.—Christmas Holidays.—Ventriloquism Extraordinary.—Upper Hall, Regent Gallery, 69, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday & Sunday, at 3.—Mr. LOVE, universally accepted as the first dramatic ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called 'THE LONDON SEASON,' and other celebrated mimetic and dramatic pieces, on Thursday Evenings at Eight o'clock, until further notice, 1st February the MERCHANT of VENICE.—MONDAY EVENING, the 29th inst., LECTURE to the INDUSTRIAL CLASSES on ELECTRO-MAGNETIC INSTRUMENTS and their remarkable Applications, by the Rev. A. BARN POWER, A.M., F.R.S. &c., Principal of the North Devon Normal Schools. Subject, the NEEDLE TELEGRAPH.—THE LECTURES on CHEMISTRY, NATURAL PHILOSOPHY, and MECHANICS, as usual, with the REMARKABLE SCIENTIFIC NOVELTY, LECTURED on by J. H. PEPPER, Esq., of Professor WHARTON'S Experiments on the TRANSMISSION of SOUND, illustrated by a TELEPHONIC CONCERT.—ENTIRELY NEW and SPLENDID OPTICAL DIORAMA, from the ARABIAN NIGHTS, of the VOYAGES of SINDBAD the SAILOR, with beautiful PHANTASMOGRAPHIA EFFECTS, and appropriate Music arranged by Mr. WADE.—VIEWS of the WAR.—PERKINS'S STEAM GUN, which now discharges 200 BALLS per MINUTE.

SCIENTIFIC SOCIETIES.

GEOGRAPHICAL.—Jan. 21.—Earl of Ellesmere, President, in the chair.—Lieut. Bedingfield, R.N., the Hon. F. H. W. G. Calthorpe, Vice-Admiral Sir G. Seymour, Sir Emerson Tennent, and Mr. Lewis Tonna were elected Fellows.—'Geographical Notes taken during a journey performed in Persia, from the city of Kerman to Khubbeese, and through the southern districts of the country to Sheraz, by a circuitous route never before travelled over by Europeans, and incorrectly laid down in our best maps,' by Mr. Keith E. Abbott, Her Majesty's Consul at Tehran,' communicated by the Earl of Clarendon. Second series.—The paper contained a description of the state of the districts traversed, the miserable condition of the inhabitants, though living in a fine country, enjoying a fine climate, and the weakness of the fortified places, as well as the roads by which artillery could most easily traverse the country.

'Proposed Expedition to the Somali Country, in Eastern Africa,' by Lieut. R. Burton.—Lieut. Burton's object in visiting Hurrur, is to explore a totally unknown country, and to ascertain whether a direct channel of commerce could not be there opened for British enterprise. The soil is reported to be most fertile. On the hills round this populous town flourish the coffee plant (the produce of which at present commands the best price in the market), the grape, the khal, and the wurras; herbs and gums are also articles of export. Hurrur is also the head-quarters of an odious slave trade. No less than 6,000 woolly-headed Galas of both sexes find their way thence annually to the western ports of the Red Sea to supply the Arabian and Egyptian slave markets. Lieut. Burton purposes going from Hurrur to Berbera, to join the other members of this adventurous

expedition. Lieut. Speke, of the Bengal army, is to make his way up the Wadi Nogal, to ascertain the water-divide of the country, as, according to the latest conjectures, Jebel Gamr runs north and south, and not, as Ptolemy taught, east and west. If this hypothesis be correct, the Nile source must of course be sought on the western slopes. Lieut. Speke will employ his gun in collecting specimens of the natural history of the country. He purposes, further, making for Berbera the place of general assembly, to visit a totally unknown country, viz., that of the Dhoulbahanta Somali, and to collect for the final expedition horses and camels of the superior description which are said to abound among this people. Lieut. Speke will adopt the character of a trader for the occasion, and has little to fear beyond hardships and loss of property. Lieut. Herne will cross over to Berbera to make inquiries respecting the various caravans frequenting the annual fair, and to discover by which opportunity the expedition can penetrate furthest to the westward. Lieut. Herne intends to explore the country in search of coal, said to exist at Kurrum, inquire about and inspect the beds of guano on the islands along the coast, compare the gums, the produce of the neighbouring country, with specimens forwarded for that purpose by Sir W. Hooker to Lieut. Burton, and take general observations. When Lieut. Burton joins the two last-named members at Berbera, the united expedition will proceed directly westward.

GEOLOGICAL.—Jan. 17.—Mr. Hamilton, President, in the chair.—'On the Laminated Structure of the Primary Rocks,' by Mr. Evan Hopkins.—The author described wide regions in several parts of the world, as exhibiting in their geological structure the phenomena of successive vertical bands of schistose and crystalline rocks, parallel with each other, and having a north and south strike. This structural condition was illustrated by several extensive and highly-finished sections made from the author's own observations in California, South America, Australia, and Ceylon.

SOCIETY OF ANTIQUARIES.—Jan. 18.—J. P. Collier, V.P., in the chair.—Mr. Henry Norman was elected a Fellow.—The Rev. Edward Trollope exhibited a bronze ampulla, and a carved ivory knife-handle, found in Lincolnshire.—The Rev. T. Hugo exhibited an iron spur, found in the Fleet Ditch.—Mr. John Martin exhibited a dagger found near Thornhaugh.—Mr. Wylie, in a letter to the Secretary, communicated some remarks 'On the Angon of Agathias and the Pilum of Vegetius.'—Mr. Brooke communicated an account of the 'Field of the Battle of Mortimer's Cross.'

ENTOMOLOGICAL.—Jan. 22.—Anniversary Meeting.—Edward Newman, Esq., F.L.S., President, in the chair.—Messrs. F. Bond, J. Curtis, J. Lubbock, and J. O. Westwood were elected Members of the Council, in the place of four who retired, and the following gentlemen were elected officers for the year:—John Curtis, Esq., President; Samuel Stevens, Esq., Treasurer; and J. W. Douglas, Esq., and Edwin Shepherd, Esq., Secretaries. The Treasurer's accounts duly audited showed a large balance in hand. Four Parts of *Transactions* have been published during the past year,—thirteen Members have been elected,—and the condition of the Society generally is better than at any previous period of its history. The President delivered an Address on the state of the Society and Entomology, referring to the principal subjects brought before the Society during the session; commenting on the entomological books published in England during the year, and giving biographical notices of entomologists lately deceased. For this Address, the Meeting passed a cordial vote of thanks; and the President was requested to allow the Address to be printed.

INSTITUTION OF CIVIL ENGINEERS.—Jan. 23.—J. Simpson, Esq., President, in the chair.—The discussion was renewed on Mr. Rennie's 'Description of the Aqueduct of Roquefavour, and the Canal of Marseilles.'—The paper read was 'On the construction of the Sea Embankments across the Es-

tuaries Kent and Leven, in Morecambe Bay; for the Ulverstone and Lancaster Railway,' by Mr. J. Brunlees.

SOCIETY OF ARTS.—Jan. 24.—John Brady, Esq., M.P., in the chair.—'On Peat and other Vegetable Charcoal, and some of its Uses,' by Mr. W. Longmard.

MEETINGS FOR THE ENSUING WEEK.

MON. Institute of Actuaries, 7.—'On the Rate of Sickness and Mortality among the Members of Friendly Societies in France,' by Mr. Brown.
TUES. Institution of Civil Engineers, 8.—'Description of the Large Roof over the New-Street Railway Station, Birmingham,' by Mr. Phillips.
— Royal Institution, 3.—'On Magnetism,' by Prof. Tyndall.
WED. Society of Arts, 8.—'On the Chalk Strata considered as a Source for the Supply of Water to the Metropolis,' by Mr. Homersham.
— Geological, 8.—'Notes on a Geological Map of Christiania,' by M. Kierulf.—'On the Geology of part of Norway,' by Mr. Forbes.—'On the Geology of the Peel River District, Australia,' by M. Odenheimer.—'On the Geology of the Ballarat Gold-field, Australia,' by M. Rosales.
THURS. Zoological, 3.—General.
— Royal Academy, 8.—'Architecture,' by Prof. Cockerell.
— Society of Antiquaries, 8.
— Royal, 8.
— Royal Institution, 3.—'On English Literature,' by Mr. Donne.
FRI. Archaeological Institute, 4.
— Royal Institution, 8.—'On Pendulum-Experiments made in the Harton Colliery,' by Mr. Airy.
— Society of Arts, 8.—Special Meeting.—'Observations on the proposed Congress for the Improvement of International Commercial Law,' by Mr. Levi.
SAT. Asiatic, 2.
— Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

Pompeii Described and Delineated by Ernest Breton, of the Imperial Society of Antiquaries of France: followed by a Notice of Herculaneum—[Pompeii décrite et dessinée, &c.] Paris, Gide et Baudry.

THIS book is written with no intention of superseding the labours of Mazois, Raoul-Rochette, Gell, Gandy, Avellino, Ardit, Bonucci, Josio, or Minervini; but of furnishing the public with a summary more portable and less costly.

The Editor professes to avail himself of all previous works upon the subject, and to confirm and verify the observations of past travellers. M. Breton writes for the world, and not for the antiquary. Having resided a long time among these tombs, the author has had time to finish in detail what others have but sketched. The Neapolitan Government, the Neapolitan savans, and even the Neapolitan guides seem to have aided him with much generous eagerness.

M. Breton has meditated much over the relics of the great nation that for more than ten centuries was the arbitrator of the world's destinies. We follow him from the Forum to the House of the Skeleton, from the Thærmæ to the Vintners, from the Theatre to the Street of Tombs.

He remarks with great justice that Pompeii was nothing but a small provincial town, mimicking the luxuries and vices of the capital—a retreat for banished voluptuaries, pensioned officers, and moralizing poets. It would be ridiculous to expect to find within its walls any traces of the ancient grandeur of antique Rome. Taste in ornamentation, skill in design, we look for and find,—and in the City of the Dead we discover, as we might expect to do, more traces of the private life of the Roman citizen than we could find in the Pantheon or the Coliseum. The Coliseum seems a work that might have come from the hands of the Titans, the buildings of Pompeii and Herculaneum, though mere toy-houses in comparison, appear to be the work of men of nearly our own rank in creation.

We find still standing at Pompeii what at Rome are mere ruins,—we mean the theatres, Basilica and Forum. Pompeii might be a city from which the inhabitants had but just fled. It wants only roofs to the houses and the sound of life within the chambers to realize the Odes of Horace or the Satires of Juvenal. If Nasidienus, in a threadbare toga, had stepped out of the house of Sallust, we should scarcely be startled. The traveller can scarcely believe that eighteen centuries have passed since the red rain of Vesuvius fell on those roofs and drove out their inhabitants.

The following condensation of the last survey of Pompeii will be interesting to our readers. The edifices of the town are built in the Greek style,

modified by Roman customs. They are generally small, but nothing is forgotten to render them convenient. The decoration is in so uniform a taste, that Mazois was at first inclined to think that it was the work of the same artists, directed by one and the same man.

Marbles are found rarely, except in the temples and theatres; the chief decorations being mural paintings, either mosaic or stucco arabesques.

The most striking feature of the city is the profusion of ornamental detail even in the meanest house. The walls are painted in fresco, black, red, yellow, blue or green. The arabesques were painted on dry ground, and are not encaustic. Mosaic pavements were universal in this little city of artists and Art-lovers. The simplest are white, with black borders; others are labyrinths of white and black cubes, and a few are richly coloured.

The houses were flimsy, built of lava, brick and petrified concrete. The wooden planks have all perished; and iron was often used by the Pompeians where the richer Romans would have used bronze. The streets were narrow in order to keep out the sun; and this was no inconvenience as the chariots were few and small, and horses and mules were used as beasts of burden. The paving is of brick, asphalt, and even marble and mosaic. The roads were paved with huge polygons of lava, clamped with iron, and filled up with loose granite, marble or flints. In the rainy season of December and January, the streets must have become mere torrents. High stepping-stones are still found to enable passengers to cross. Before the shop-doors are frequently found blocks of stone, pierced with holes, which were used to fasten horses. At the angle of most of the streets are fountains: these are ornamented with reliefs and carved masks.

The house-walls facing the streets are covered with innumerable inscriptions, votive or secular, with advertisements of shows and fights, lampoons and caricatures.

M. Breton remarks, with French antithesis, "There are some men to whom death has given a renown which the obscurity of their life never seemed to promise—some nations have acquired a celebrity by their defeats—some towns have become famous by their very destruction. Such was the fate of Pompeii, Herculaneum and Stabia,—unimportant towns of the Campania, which would have left a name unknown and inglorious in history; but a sleeping volcano awakes and swallows them up, and they become the inheritors of immortality." Seventeen hundred years pass away, and the lid of the tomb is lifted off, and we look down upon the Roman corpse untouched by decay—the bloom still upon the cheek. The mummy pits have preserved for us the manners of ancient Egypt:—Pompeii enables us to revisit the Rome of the Cæsars.

Numerous illustrations and a ground plan conduce to make M. Breton's book useful to the traveller.

NEW PUBLICATIONS.

Dozing by the Old Pump. Painted by W. Huggins; Engraved by Harris and Quentry.—*A Foraging Party.* Gambart & Co.

THESE two plates are very admirable in drawing and expression, but inferior in colour, and more like rough German lithographs than most of Messrs. Gambart's previous publications. We see no attempt to blend the rude colour, which is neither truthful nor pleasing, and is quite unworthy of what we remember of the original pictures. The half-shut eye of Chanticleer, in the first print, is admirable: so twinkling and sleepy, and yet so watchful and cunning. There is in it just that spark of latent humour and malice which makes us sometimes feel an uneasy suspicion, when we catch an animal's eye, that animals possess a secret or two of nature that is unknown to us, and that our ignorance amuses them while they pity it; or, in an hour of superstition, fancy the animal for the moment tenanted by some small familiar as a convenient and unobserved lurking-place, from whence to view us, and see how it might best egg us to mischief. We feel that they

could speak, but will not. The hen's neck turned pryingly round as if half-listening to some distant cackle is equally well observed and well conveyed.

A Jar of Roses. By W. Hunt. Gambart & Co.

A more tantalizing daub than this we have seldom seen, and regret to pronounce the plate a failure. The roses are such "blobs" of pink and red as used to encircle rows of melancholy verse in young ladies' albums fifty years ago. Coloured printing has not yet attained either clearness or sharpness; if this plate may be taken as a specimen, the art seems to be retrograding.

FOREIGN CORRESPONDENCE.

Paris, Jan. 1855.

IN my last letter [*ante*, p. 17] I reported the substance of what took place in the first sitting of the Permanent Commission of the Fine Arts. I resume the story.

As the Director of the Museum was descending the "monumental staircase," the Duc de Luynes took him aside, and said, "You spoke warmly. You were alone in your opinion, but perfectly convinced; and a strong conviction always pleases and produces its effect. Many things in your fierce declamation struck me, and are worth examination. The Commission will consider them. For my part, they interest me. But let us set aside for a moment the obscure problems you talk of, and say something of the unknown talents. You believe, then, in unknown talents?"—"Probably, M. le Duc."—"In many arts, sciences, and professions," continued the first speaker, "I can believe in them; but in Painting not. A book may want readers,—but a painting, a statue, is always seen. Come, come, M. le Directeur, that was a careless, a regrettable accompaniment of your brilliant improvisation; but you do not believe in it." M. Jeanron, who talks of these matters as of a religion, replied with great earnestness, "Improvisation may be the cause of bad speaking, but it cannot make a man utter what he does not think. Perhaps I was wrong to say what I did; but I cannot prevent myself from believing it."—"Yet, reflect a little. How can you persuade a Parisian of such a thing? We have annual Exhibitions. We have the attractive windows of so many picture-dealers. Amateurs, like myself even, sometimes enter the poorest shop."—"To be sure, because they expect to find something good,—which bears on what I say."—"I cannot believe it. Our means of publicity are too extensive. If a man is overlooked in one Exhibition, he is consoled at the next. What I chiefly complain of is our great indulgence for the most deplorable attempts."—"Again you support my views."—"Well, M. le Directeur, if you are convinced, you must convince me, positively."—"I shall be most happy. But this is a delicate matter, and I should not like to advance indiscreetly. However, had I not the honour lately to accompany you and many other persons sent to the Tuileries to carry out certain projects of the Assembly? We saw numerous paintings,—testimonies of the artistic munificence of the last reign. I was silent, as fitted a person of my small importance; but I saw you shrug your shoulders before most of those works, saying, 'All this is detestable!' Now, if it is possible that so much honour can be paid to so much weakness, is it not possible that many good things have passed unnoticed?"—"This reasoning is not sufficient. The king in that particular was a private person. But the public—but all the amateurs who visit our too numerous Exhibitions! Come, come, I defy you. I summon you to point out a single name of an unknown artist who has produced anything good in our Exhibition!"—"Yet I esteem, M. le Duc, as many whose names you do not know, as you esteem others whose names you do know. However, I am not obliged to go further than I ought. I will not mention any name. It is sufficient to state truths."—"So you withdraw, and admit yourself vanquished!"—"No," replied the artist, who had reasons for his silence; "and indeed it is perhaps a duty to put the powerful and the benevolent on the right track. Yet if I mention twenty names, completely unknown, what

will be the result? You will think I have no taste, or a particular taste quite unjustifiable, or that I have some special object to serve,—perhaps of friendship. However, listen to what I say. I have a clerk in the Louvre, who is not rich, but who sacrifices all he can to the frenzy of picture-buying. Yesterday, he showed me a painting which an anxious-looking person had brought him from a poor devil who wanted twenty-five francs for it. My clerk, a friend of the Arts and a mighty judge, would not buy, because a short time ago, for fifteen francs, he had acquired a painting by the same hand which he considered to be more important and more beautiful. I was much moved;—but let me come to the point. That picture, which did not find a purchaser at twenty-five francs, the exclusive Academician whom I have refuted could not produce it. I do not admit him to possess so rare a talent. There, M. le Duc, I have spoken out, and given the finishing stroke to my imprudence. But I now stick to my point; and I peril the reputation of my judgment in a matter which I have studied in solitude for thirty years."—"You alarm me," replied the Duc de Luynes, smiling; "but you have not mentioned the name of this painter."—"His name is Guignet. I do not know whether he is young or old, fair or brown. I have never seen him, and had no call to see him. But I tell you that he is a master in our French School, to whom no other, who does not wish to be set down for a fool, has a right to prefer himself."—The Duc de Luynes, still smiling incredulously, admitted that he had never heard the name. "The youth has probably not yet exhibited," said he, lightly.—"Monsieur," answered Jeanron, "I said I did not know whether he was young or old; but this I know, that he has been exhibiting for ten years, and that his early works were as remarkable as are his late ones."

A week afterwards, the Duc de Luynes, as he came out of the Commission of Historical Monuments with M. Jeanron, said to him, "I have, at last, seen a painting by your M. Guignet."—"Well?"—"I thought it very fine, very original, very powerful. Without doubt, he is a man of wonderful talent. But, *mon Dieu*, how difficult it is to find his works! He must produce very little!"

M. Jeanron answered, that he was much relieved at finding his opinion of Guignet confirmed by an amateur whose respect he wished to preserve; but added, "For my part, without searching, I have seen many things by Guignet; but, even if you must search, is it not necessary to admit that what is common is not rare, and that what is rare is not common?"

In another week, M. Jeanron, one morning, was visited by a man, about thirty-five years of age, distinguished and intelligent in appearance. This was Guignet, who came to say that the Duc de Luynes had found him out in his garret, had bought many of his paintings, and had ordered of him some extensive works, to be handsomely paid for, which would occupy many years. "In fine," exclaimed the rising artist, "I come to thank you for my fortune. We cannot be long in learning to love one another," added Guignet, pressing his hands; "let me embrace you!"

The other incidents of this painter's life are not particularly remarkable, though some of them assist in manifesting his character. One of the earliest events he remembered had some influence, no doubt, in determining the character of his paintings. He narrowly escaped death, at Salins, in the Jura, during an inundation, which utterly ruined his family. Then he was sent, or taken, to Paris, without object; and, afterwards, removed to the Château de Bonneuil, where his father was steward. Here he passed his time in hunting through the woods. In 1830 they sent him as a pupil to a surveyor; but he was disgusted in a couple of days, and escaped into the forest, where he lived for nearly a week like a wild man. Returning to his family, he boldly expressed his desire to be a painter; and, as a proof of capacity, undertook the portraits of both his father and his mother. He succeeded to parental satisfaction. What was to be done?

They yielded to his wishes, and sent him to Paris. Luckily, General Pajol was known to them. He gave the young student a garret in his hotel for a studio; and, in 1840, Guignet was able to offer to the Exhibition five paintings,—which were noticed by some and praised by all who noticed. The world, however, was too much dazzled by Delacroix's famous picture of the 'Triumph of Trajan' to load its memory with the name of this new artist.

The following is the list of the works of Guignet, in chronological order:—1840.—1, Prisoners cast from the Summit of a Rock. 2, Moses exposed on the Nile. 3, Travellers attacked by a Bear. 4, Joseph explaining Dreams. 5, Agar in the Desert. 1841.—6, Cambyse and Psammetichus. 1842.—7, St. John the Baptist Preaching. 8, Combat of Barbarians in a Defile. 1843.—9, Episode in the Retreat of the Ten Thousand. 1844.—10, A Méléé. 11, Salvator Rosa among the Brigands. 1845.—12, Joseph explaining the Dreams of Pharaoh. 1846.—13, Xerxes. 14, Condottieri after Pillage. 1847.—15, A Landscape. 16, A Forest. 17, A Gaul. 1848.—18, The Bad Rich-Man. 19, Flight into Egypt. 20, Two Philosophers. 21, A Knight Errant. 22, Don Quixote mad.

Some of these paintings have been lithographed by Moulleron & Leroux. We may add, that the works ordered by the Duc de Luynes—and all completed—were three vast paintings:—'The Garden of Armida,' 'Balthazar's Feast' and 'The Battle of Châlons.' The last mentioned, a splendidly elaborate production, was finished only a short time before Guignet's death. But the young painter, on re-consideration, thought it not adapted to the light in which it was to be placed—the Duc intended it, as well as the others, to adorn his Château de Dampierre,—and had already commenced another, when illness seized him, and in two or three days he was carried off, on the threshold of what promised to be a course of uninterrupted success.

Guignet's death produced a great sensation among a few artists, who were above the influence of the feeling of competition and rivalry, and among a few friends of Art capable of choosing for themselves, without reference to the decrees of fashion or the intrigues of coteries. But, as it was natural to expect, the French public, so prone to vaunt the elegance of their taste and parade their enthusiasm for artists and for Art, has remained perfectly indifferent. Whose business is it to announce that a great genius is departed? Since the day when M. Jeannon succeeded in conquering for the struggling artist the esteem and admiration of a rich amateur, his name has by no means spread abroad. His success was not paraded either by himself or his friends. Besides, there exists as it were an organized silence in matters of Art. People only talk of what they understand and appreciate. How could Guignet, with his careless character but assiduous industry, his deep and powerful talent, expect to reap the benefit of that daily talk of eager comrades—Knights of the order—"Praise me, and I praise you"—on which all noisy and profitable reputations are founded in Paris, and perhaps in other countries too? He worked for many years under M. de Luynes' roof, in a comfortable and respectable condition: what more could he desire? He did not even take care to invite people to see his works as he finished them off. "The artist," he would say, "who labours for the satisfaction of his vanity is a fool; but he who labours for the satisfaction of his conscience alone is wise." The distinction is delicate, but true; and it was this reflection that restrained him from much seeking applause. There are people, whom independence of this kind irritates, and who say that such a stiff character is well paid by being left aside utterly forgotten. Perhaps so; but let us admit frankly that the artists thus neglected are often the most genuine. They love their art; and when the light thickens in their ateliers,—when the forms they have called into existence seem to fade in premature death,—when the hand is weary and the brain demands repose,—these are the men who still remain at home a-thinking what they cannot perform till

the morrow, dreaming away along the innermost regions of invention;—instead of carrying their rough exterior into elegance, and going forth into the world to seek amusement or applause until ten in the morning, rising at mid-day to make their pallets in lieu of refreshing their eye-balls with the first breeze that is warmed by the sun.

M. Albert de la Fizelière, endeavouring to do justice to a departed genius, in a pretty article professes to estimate the powers of Guignet; and of course brings in the names of Delacroix and Decamps. But he lauds and lyrifies, instead of analyzing and scrutinizing, the capabilities of the remarkable artist. I hope to do in a future letter what he has not attempted:—to examine Guignet's talent in itself, and in its relation with the French contemporary school as well as with old schools.

B.

FINE-ART GOSSIP.—M. Kiss, of Berlin, whose 'George and the Dragon'—a companion group to the 'Amazon'—has been several times spoken of in the *Athenæum*, is preparing to send his model of this uncast work to the Paris Exhibition, where it may possibly find the purchaser it has not found in Prussia.

We hear from Paris that M. Delaroche has the following works in progress:—'Mary Stuart receiving the Sacrament before her Execution,'—'Napoleon on the Rock of St. Helena,' a very large picture, 'Good Friday,' a small picture, representing the Virgin and the holy women preparing to leave their house to follow Christ to Calvary, 'A Companion Picture,' the return to their house. We hear that it is impossible to describe the expression of sorrow in the faces of the figures. M. Delaroche is now making studies for a series of pictures to represent all the events of Holy Week. Another work on which M. Delaroche is engaged, is 'The Last Meeting of the Girondins,'—a large picture, begun some years since, and laid aside after the revolutionary excesses of 1848, which disgusted the painter.—M. Horace Vernet has in hand a large picture of 'General Randon in Kabylie.' In a picturesque valley, after the defeat of the Kabyles, the General and his army attend mass, performed by the Priest Régis: the smoke of cannon veiling the altar and partly concealing the rustic cross. Of this scene M. Vernet was a witness. M. Vernet, says our Correspondent, "is again off to Africa. Though sixty-seven years of age, he works with the freshness of youth. Dreaming at night of a subject, he rises at dawn to commence it; and completes the picture without studies or models of any kind with the truth and fidelity of a daguerreotype."—M. Ary Scheffer has just completed a grand picture of 'The Devil tempting our Saviour,' also another subject, 'Our Saviour with a little Child,' and a composition of 'The Unbelieving converted.' The unbelievers are standing on earth, and, their eyes cast up to Heaven, are in a kind of ecstasy converted by the Spirit of God.—The Government has given a large number of commissions to various artists in Painting and Sculpture for works to be exhibited in the Exposition Universelle of 1855.

The death of M. Guérin, a French painter of some celebrity—one of whose pictures, 'The Curse of Cain,' has been thought worthy of a place in the Luxembourg Gallery,—is announced among the other news of the week.

Prof. Fogelberg, a Swedish sculptor, best known by his last statue of Charles XIV., has just died at Trieste.

The spire of St. Stephen's Cathedral, at Vienna, has just been repaired at a cost of about 50,000 florins. More important restorations are spoken of, and the lively Viennese seem at last, in spite of their French bias, awaking to an appreciation of Gothic architecture. By this revival we may hope the glories of Gothic Art may be preserved among us for some centuries longer. In France the same good work progresses at Notre Dame, Rouen, and in nearly all the French provincial towns the same good work goes on.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS, Willie's Rooms.—FOURTH SEASON OF CLASSICAL INSTRUMENTAL CHAMBER MUSIC. The Reserved Seats of Subscribers, 1854, not claimed by the 1st of February, will be let to new applicants. The dates of the Concerts are Thursday, February 15, March 1, 15, 22, and 29. Subscription, 30s. Single Admission, Half-a-Guinea. Seats for parties of five may be secured, and for schools a sixth admission will be given free, with reserved places. The best talent will be engaged. For a list of Patrons and other particulars vide Prospectus and Records of the past seasons, at Gramer & Co.'s, Regent Street; Chappell & Co.'s, and Ollivier's, Bond Street.

J. ELLA, Director.

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA. FRIDAY NEXT, Feb. 2, Haydn's 'CREATION.' Vocalists: Miss Birch, Mr. Sims Reeves, and Mr. Weiss, with Orchestra of (including 10 double basses) 700 Performers.—Tickets, 3s., 5s., and 10s. 6d. each, at the Society's Office, No. 6 in Exeter Hall.

EXETER-HALL.—Mrs. FANNY KEMBLE will have the honour of reading Shakspeare's Play of A MIDSUMMER NIGHT'S DREAM, on MONDAY EVENING, FEBRUARY 5. The reading will be accompanied by the whole of the incidental Music, composed by Mendelssohn, and performed by a full Orchestra and Chorus, under the direction of Mr. Benedict. To commence punctually at 8 o'clock.—Reserved Seats (numbered), 7s. 6d.; Reserved Seats (not numbered), 5s.; West Gallery, 3s.; Area, 2s. Tickets and places may be secured at Mr. Mitchell's Royal Library, 33, Old Bond Street, and at the Music-sellers and Libraries.

SACRED HARMONIC SOCIETY.—We must advert to Madame Rudersdorff's singing in 'Judas' at the last performance of the *Sacred Harmonic Society*, since, having expressed dissatisfaction with her efforts on the stage, an opportunity of giving her credit when credit is due must not be overlooked. Her reading of Handel was the reading of a good musician,—her pronunciation articulate and refined,—and her voice, being far less forced in oratorio than in opera, was more agreeable than it had as yet appeared to us. The performance, in short, was decidedly a good one,—and, we should imagine, may open a new path for the Lady. In proportion as she can forget the violent ways of German singing will the concert-public in England which she can gather and retain be large.—The *Harmonic Union* will begin its performances with 'The Creation.'

OLYMPIC.—That the authors of French pieces adapted to the English stage derive an unfair advantage and undeserved reputation from the practice is frequently evident:—the superiority to the original of Mr. Talfourd's version produced on Monday, under the title of 'Tit for Tat,' of 'Les Maris me font toujours Rire,' by MM. Delacour and Jaimes fils, is an instance in point. Neither in structure nor dialogue are many of these dramas really stage-eligible as they originally stand, while frequently, as Mr. Charles Mathews stated in his pamphlet on the subject, the story and incidents, if imported in their native shape, would prove either intolerably tedious or revolting. More than half the credit they have with us is due to the adapter. In this case, Mr. Talfourd has been indebted for a mere suggestion and outline;—the filling up, carrying out, and colouring are entirely his own, and it would have been better still had the plot also been so. The only objection to the piece lies in the latter, which of course has an unnecessary intrigue, that uniform motive-spring of action in French pieces, as offensive for its monotony as its immorality. There is also a want of novelty in the part of Sowerby (Mr. Robson), who is made jealous by a careless and jocose bachelor admirably impersonated by Mr. Wigan; who, in the second act, gets married himself, and then suffers jealousy by the contrivance of his former victim. Whoever might suppose from this, however, that Mr. Wigan is fitted with a part calculated to enable him to compete with Mr. Robson in the manifestations of this semi-tragic, semi-comic passion, would be mistaken. When served up a second time, the dish is cold and scanty;—it merely helps to round-off the tale, and by the meeting of extremes to complete the interest. The merit of the piece consists in the surprises of the dialogue, and the mystification by turns of the whole *dramatis personæ*, who are, however, made to work out completely, notwithstanding their and his blunders, the malicious purpose of Sowerby. His plans succeed in the end, though not in the means, and in this heterogeneity of design, and result consist the sport and amusement, the collision and embarrassment of the action. The joy manifested by Mr. Robson when he gets his former

tormentor into the very cabinet in which he had been formerly made to conceal himself, is humorous. We must not close this notice without doing justice to Mr. Emery and Mr. Clifton; the former of whom as *Mr. Frankland*, a banker and Sowerby's partner, had a nice and difficult part to perform; the latter, as *Mr. Easy Bolter*, a member of the turf, guilty of false aspirates, and yet accepted as a verse-writer and a gentleman, made the most of his part, and was uneasily amusing and annoying. The drama has a peculiarity in its structure:—it consists of two actions, and is, in fact, two dramas, represented in two acts, and performed by the same individuals, with the exception of Bolter. This arrangement is somewhat after the Greek fashion of constructing a series of pieces for consecutive performance on the same argument in its different phases; and the idea might be profitably carried out in some future venture.

MUSICAL AND DRAMATIC GOSSIP.—A rumour repeated by us last week in the spirit of caricature, illustrating the extent to which wanton talk could outdo the real doings of foolish debate—namely, the invitation of Herr Wagner to conduct the *Philharmonic Orchestra*—is now proved to be no idle report, but a reality. A deputation, we believe, was despatched to Zurich, with the hope of averting the possibility of denial. Such compliments were not paid to Beethoven, Weber, or Mendelssohn in their day. Nor is this all. It is said, further, that the Philharmonic Committee has resolved for the future to elect for conductor no artist residing in London! There is a time in every man's experience at which nothing ought to amaze him. Still, we are astonished at this engagement of Herr Wagner,—since, supposing that it was agreed on as necessary and graceful to shut out Messrs. Bennett, Mellon, and Lucas, Herren Molique, Benedict, and Halle from having a chance—supposing that we were to be spiritedly shown that no competent conductors exist in England,—we submit that it was not needful to pick out from among all the Continental musicians the man of men whose avowed and published creed is contempt for all such music as the English love, and whose acceptance in Germany is universally spoken of as a business of party, arranged and maintained by the destructives and kept at fever heat by the strong personal influence of one of the most remarkable men of his time, Dr. Liszt. Where this has not penetrated, Herr Wagner's two operas are not received. Our own opinion of them, as false in principle, repulsive in effect, and bad as examples, has been already recorded, nor does increasing acquaintance with them lead us to reverse our judgment. In short, the appointment of Herr Wagner can be regarded as nothing short of a wholesale offence to the native and foreign conductors resident in England,—the justification of which can only be found in the quarrels of selfishness with self-interest, terminated by a joint resolution to elect the candidate whom there was no possibility of any section of our amateurs or connoisseurs supporting.

At the "Mozart Night" of M. Jullien's *Promenade Concerts* (one of the most crowded assemblages ever collected by M. Jullien), among other pieces, the *rondo* of a *Sonata*, performed by Madame Pleyel and Herr Ernst, was *encored*. It might have been thought impossible to get even a hearing for music so quiet, and on so small a scale, in the vast arena of Covent Garden Theatre.

We hear from Sydenham, that the courtesy which was suggested by a Correspondent in commemoration of the visit of the band of the *Guides* had been already anticipated by a resolution of the Directors of the Crystal Palace, who struck a commemorative medal, an impression of which, in bronze, was sent to each member of the detachment, accompanied by a ring—with an inscription for each of the four officers—viz. the Baron de Verdère, *aide-de-camp* to the Emperor; Baron Vidil, officer of the Guides; M. Mohr, Director; and M. Ory, Sub-Director of the band. These articles were transmitted through the Ambassador on the 18th of December. An impression of the medal, it is added, was also given to each member of the

fifteen military bands who combined with the Guides in the concerts. We have only further to add, that the medal was executed by Mr. Pinches; the obverse being from a sketch by Mr. D. Wyatt.

We perceive by extracts from Scottish papers, that some intention exists of placing a statue of Mr. Wilson, the well-known singer, in one of the niches of the Scott monument,—partly because of his skill in illustrating the Waverley characters,—partly because, ere he took up music, Mr. Wilson, then in a printing-office, was among the few who held the secret of "the Great Unknown." Both claims are fair ones:—but if honour is to be done to the Scottish musician, his monumental place should be, not near Scott—but Burns.

Letters from Paris mention that the "Te Deum" of M. Berlioz, for orchestra, organ and three choirs, will be performed at the Church of Saint-Eustache, on the 1st of May, on the eve of opening the Great Exhibition: after which he will come to England to fulfil his engagement with the *New Philharmonic Society*.—We are informed, also, that M. Gounod is engaged on a new grand opera;—and that the rehearsals of Signor Verdi's "Les Vêpres Siciliennes" have been resumed.

About this time of year "when Valentines begin to peer" in the shop-windows, Opera rumours take something like form and colour.—Mr. Gye is said to have engaged Madame Cerito: so that ballet, it would seem, is to bloom in "the Garden."

M. Scribe's new five-act play, just produced at the *Théâtre Français*, is a work, in more than one point of view, of considerable temporary interest. It is understood to contain the last new part which Mlle. Rachel will attempt previous to her American journey. From the past experience of these Transatlantic flights, we should be justified in fearing that this might prove altogether Mille. Rachel's last new play;—but we would rather hope against precedent.—Then, again, "La Czarine" is noticeable, at this present time, as another Russian story put upon the French stage.—Is the "unbelief" of this age, or rather its enlightened spirit, shown in the resolution to separate works of warfare and works of Art, which has hitherto marked the contest in which we are engaged? In more than one passage have we been reminded of Hood's wondrous whimsy of "civil war" by the courtesies of the time, till we are recalled to the frightful barbarisms and sufferings which have marked this winter's campaign, by some new fact which calls us out of the world of perfumed and complimentary letters and "shining theatres." Time was when no subject from an enemy's history could, at such a time as the present, have been presented on the stage save for the coarse purpose of inflaming national hatred. M. Scribe, however, does not appear to have written Mille. Rachel's new part in rose-water: since, though the drama is generally pronounced weak, and though the language is not such as the Lady shines most in delivering, she has a last act of hate and revenge, ending in her proclamation as Empress, which ought to satisfy the most wicked of wicked stage queens. We may speak of this "Czarine" again. — Meanwhile, *à-propos* of Mlle. Rachel's performances, we may here introduce part of a note from another Correspondent, completing the information which the *Athenæum* requested, on the subject of the great French actress in *Athalie*.—

"She played the character at the *Théâtre Français*, in Paris, in the month of April, 1847. I witnessed her performance of it on, I think, the 18th of that month, the occasion being the *début* of her younger sister. It is not probable that you will attach much value to the opinion of one wholly unknown to you; but still I may mention, that I thought it one of the finest, because one of the most ideal, of her impersonations, and I have often regretted that it could not be repeated during her London visits. Of the rest of the cast I remember but little. The terrible figure of Rachel, and the girlish timidity of her young sister—particularly in the scene in which the two appeared together—alone remained fixed in my memory."

A new piece, called "Leon of the Iron Mask," by Mr. Bernard, will be produced at the Marylebone on Monday week.—Miss Cushman will appear in *Romeo* at the Haymarket on Monday next.

The *Théâtre de la Monnaie*, at Brussels, a handsome theatre, (too large, indeed, it always seemed to us for the Belgian capital,) was entirely destroyed by fire on the morning of the 21st inst.

MISCELLANEA

The Black Book of Breadalbane.—At the last meeting of the Society of Antiquaries, Scotland, Mr. Cosmo Innes gave an account of "The Black Book of Breadalbane," preserved at Taymouth, containing portraits of several members of the Breadalbane family, executed in the beginning of the seventeenth century. This volume was stated to be almost wholly written by Master William Bowie, who seems to have filled the double office of tutor to the sons of the Laird, and family notary at Balloch (now Taymouth), under Sir Duncan Campbell, the seventh laird of Glenorchy. He began the work in the month of June 1598, and the last entries, in the hand of a younger scribe, are continued down to 1648. The acquisitions of the family, and the tastes of the various lairds in their "plenishings" are described; and particular reference is made to Sir Colin, the eighth laird of Glenurquhay, as to his taste for pictures, fine furniture, Arras hangings, Flanders napery, and silk beds. He employed two artists to paint pictures, chiefly from imagination, of historical personages. One of these is only distinguished as the "German painter" whom he entertained in his house "aucht moneth, and that for painting of threitie broads of the Kings of Scotland, &c., and of the said Sir Coline his awin and his predecessors portraits, whilkis portraits are sett up in the hall and chalmor of dais of the house of Balloch." The other artist was the celebrated painter George Jamesone; and the notices of his employment showed the rate of payment of the first of Scotch artists to be at the rate of 20*l.* Scots for each picture. It also appeared that Jamesone was working at Balloch while the book was writing; and that he might be the artist who dashed off the last of the rude but curious sketches on the blank leaves of vellum at the end of the volume.

Knowledge of the Early Fathers.—Penrith, Jan. 23.—The recent number of the *Edinburgh Review* contains an article on the great linguist Mezzofanti, which is prefaced by a cursory notice of other persons famous for the same gift. The remarks there made on the linguistic attainments of several of the early Fathers of the Church, appear to me exaggerated. The remarks I refer to are these:—"St. Jerome, besides the classic languages and his native Illyrian, is known to have been familiar with several of the Eastern tongues; and it is far from improbable that the commentators and expositors of the Bible, such as Origen, Didymus, St. Augustin (who besides Greek, Latin, Coptic, and Hebrew, may, from his Manichean associations be presumed to have known other Eastern languages), Theodore of Mopsuestia, and even the more modern St. Ephrem the Syrian, may be taken as amongst the most favourable specimens of the linguists of the classic times." Now although Jerome possessed such a sound knowledge of Hebrew as to make his works far more valuable to us in a philological point of view than those of all the other Fathers put together, yet we have not this exalted notion of his attainments. It is the absolute uniqueness of his Hebrew philology among the early interpreters of the Old Testament, and the fact that he represents so old a phasis of Jewish tradition concerning that tongue, and by no means the extent or grammatical accuracy of his Oriental scholarship, as judged by our much higher standards, that constitute his chief merits in our eyes. A certain knowledge of Hebrew and Chaldee is readily conceded to him; but Von Coelln and Gesenius reasonably deny him any acquaintance with other Semitic languages. As for Origen, his editor, Huet, and Clericus absolutely deny his acquaintance with the Hebrew alphabet; and Gesenius and Von Coelln only modify this so far as to say that "he perhaps possessed such a superficial knowledge of Hebrew as a few weeks' instruction could give," or that "his writings lead to the conclusion that, at the utmost, he could read the Hebrew character, and knew the traditional, and often ungrammatical, interpretation of proper names." Of Didymus, who was quite blind from his fourth year, Von Coelln says,—"He betrays a general knowledge of Hebrew in his work on the Trinity." Augustin more than once distinctly avows his ignorance of Hebrew; and the elder Rosenmüller does not allow him sufficient acquaintance with Greek to be able to use the Greek text. Coptic is possibly a mistake for Punic; the native, and not then extinct tongue, of his race, of which his writings show him to have had some knowledge. Rosenmüller speaks of Theodorus as having no knowledge of Hebrew at all, or only a very slight and ungrammatical one. Sozomen and Theodoret flatly declare that Ephrem was ignorant of Greek; and Zengerke extends that assertion to the Hebrew language also.

I am, &c.

JOHN NICHOLSON.

TO CORRESPONDENTS.—D.—T. R.—G. G.—J. B.—D. B.—A. R.—W. B.—L. J. H.—W. B. C. (Sydney)—M. Q.—M. A. G.—M. & Co.—J. R.—G. J.—received.

* * * The title-page and table of contents for the year 1854 are given with our impression this week on a separate sheet;—an additional stamp, for the stamped edition, being required by the Post-office,—subscribers are therefore recommended to preserve them carefully, as duplicate copies cannot be had.

THE WESTMINSTER REVIEW.

The 82nd Thousand, price only 1s. sewed, or 1s. 6d. in stout cloth boards, (postage free, 4d. extra),
WITH A VERY USEFUL GENEALOGICAL CHART OF THE SOVEREIGNS OF ENGLAND,

INCE'S (HENRY, M.A.) OUTLINES OF ENGLISH HISTORY,

WITH INTERESTING

Remarks on Manners, Customs, Arts, Dresses, &c.

BY JAMES GILBERT.

* * In consequence of the rapidly extended sale and approval of this Work, every page of the present Edition has again been very carefully enlarged and much improved. By a judicious enlargement of the width and length of the page, one-third more letter-press is introduced without any increase of price.

"A new, enlarged, and improved edition of a little work, which has long been favourably known in schools and families. It is admirably calculated to do what it pretends to do—that is, to put the young pupil in possession of an accurate knowledge of the leading events of English History."—*Tail's Advocate*, September, 1854.

"We are glad to see a new and improved edition of 'Ince's Outlines of English History,' a work which on its first appearance obtained our approval, and has since been well received by the public."—*The Athenæum*, September 16, 1854.

"A new and stereotyped edition of a very valuable little book. It contains within a small compass the main facts of English History, and a variety of information respecting the manners and customs of the different periods. Although professedly written for the use of schools, there are few of us who will not find it useful to refer occasionally to its pages."—*Lady's Newspaper*, Aug. 19, 1854.

"We are pleased to see this very valuable little volume still being multiplied, and extending the sphere of its useful operation. The present edition is very much extended and improved. It now embodies, to an extent nowhere else to be found within the same space, the main facts of the history of this great country, and is calculated to be alike useful to old and young."—*The Christian Witness*, September, 1854.

"This book is not undeserving of the popularity it has obtained: it is full of information, and contains the substance of more knowledge of the social progress, manners, and customs of our ancestors, than many works of far larger pretensions."—*The third review of the Athenæum*.

"A great deal of information in a small compass, and the author has availed himself of the latest authorities. We prefer the form of Outlines to Catechisms. It contributes to the formation of more logical views, both by the teacher and scholar. Catechisms are the school-books of parrots."—*Spectator*.

"In the system of education, sufficient regard is not always paid to impressing on the pupil's mind the leading points in a branch of study. His memory is confused with a too great variety of details. This manual of Mr. Ince's is well calculated to counteract this defective method, by affording a well-digested outline, which should be carefully committed to memory, and afterwards filled up by means of oral instruction or reference to larger works. Lively chapters of historical memoranda, and brief sketches of manners and customs are appropriately introduced. We can cordially recommend this well-digested manual."—*Sharpe's Magazine*.

"Well-digested and useful Outlines of our history, and deserves to be a standard educational work."—*Edinburg Review*.

"Superior to anything of the kind; here is a clear and comprehensive outline of the whole History of England. We cordially recommend it."—*Weekly Banner*.

"A good compendium; it contains the essence of very many volumes, serving not only as helps for the education of youth, but as refreshers to the memory to those who are old."—*Sunday School Magazine*.

"Both the plan and style are perspicuous; it is admirably adapted for what it is intended."—*The Times*.

"A well-digested book."—*Literary Gazette*.

"Well adapted for the education of the young."—*New Monthly Magazine*.

"The brief statements of the principal events of each sovereign's reign are neat and succinct."—*The Economist*.

"An improved edition of Mr. Ince's very useful book."—*The Rambler*.

"These 'Outlines' are particularly well done."—*Banker's Magazine*.

"A valuable addition to those books specially designed for education."—*Bell's Messenger*.

"A neat and accurate compendium, and written with perspicuity. The events of each reign are arranged under different heads, so as to give at a glance a comprehensive view of the whole."—*Athenæum*.

"A new edition, with improvements. It is a little 'Rapin' in its way—a history condensed into a nutshell; and we feel assured will, with its companion works, form the future text-books of the young of both sexes. Works intended for the mental culture of the young are sure to meet our approval when properly deserving it; and in the present instance, we feel inclined to extend the usual limit of our remarks in favour of the lucid and well-arranged books which Mr. Ince has issued for the rising generation. We could not forbear to smile, on glancing over their contents, at the recollection of the sundry fat quartos and huge folios through which in boyhood we were obliged to wade, for the acquirement of a less amount of information than is here presented within the space of one hundred pages."—*The Mirror*.

"The leading points are clearly traced, and adapted for easy transmission to the mind."—*Mark-lane Express*.

"Contains a vast amount of interesting and useful knowledge, and admirably adapted as helps to parents and teachers of youth."—*Tail's Magazine*.

"A very useful book for the instruction of youth, being a complete résumé of the whole History of England."—*Melropolitan*.

In 18mo. price 1s. sewed, or 1s. 6d. stout cloth boards, (postage free, 4d. extra),

THE EIGHTH EDITION OF INCE'S (HENRY, M.A.) OUTLINES OF FRENCH HISTORY,

WITH NOTICES OF

The Manners, Customs, Arts, &c. of the different Periods.

BY JAMES GILBERT.

"It affords a very pleasing view of the whole History of France. The author being gifted with a philosophical mind and a classical taste, the subjects, though treated in a detached, are far from being treated in a dry and unentertaining manner."—*The Times*.

"It is embellished with some capital engravings, and abounds in the narration of those romantic events which form the groundwork of so many delightful works."—*The Mirror*.

"Mr. Ince is not of those men who speak much without saying anything; he says much in a few words."—*French Paper*.

"A very useful educational work."—*Literary Gazette*.

Preparing for Publication, uniform with the above,

INCE'S (Henry, M.A.) OUTLINES:—GEOGRAPHY, by Professor Wallace.

INCE'S (Henry, M.A.) OUTLINES:—GRECIAN HISTORY, by the Rev. E. Walford, M.A.

INCE'S (Henry, M.A.) OUTLINES OF ROMAN HISTORY (Will be ready shortly).

Price 1s. sewed, or 1s. 6d. bound in stout cloth boards, (postage free, 4d. extra), the Twelfth Thousand of

INCE'S (HENRY, M.A.) OUTLINES OF GENERAL KNOWLEDGE.

BY JAMES GILBERT.

* * This Edition has been very much extended and improved; by an enlargement of the size of the page, and careful arrangement of the type, a very great quantity of highly valuable information has been added.

"The 'Outlines of General Knowledge' embraces a great variety of facts connected with the natural sciences. Even the names of all the divisions into which the moderns have classified knowledge, fill no inconsiderable space. Add to them the names and height of mountains, and names and lengths of rivers, the names of constellations, the names of the chemical elements, the amount of population of the different kingdoms of the world, the amount of their respective taxation per head, &c. &c. and the mere nomenclature seems calculated to fill a tolerably large book. All this, and more than this, is collected in Mr. Ince's 'Outlines,' and those not accustomed to the art of the author, will wonder how one small head could carry all he has brought together."—*The Economist*.

"Well-digested 'Outlines,' which should be committed to everybody's memory."—*Sharpe's Magazine*.

"Contains for its size a remarkable quantity of interesting and well-arranged information. It would make a valuable present to Sunday Schools and Lending Libraries."—*Athenæum*.

"A capital book, deserving especial attention."—*Family Friend*.

"A vast amount of condensed information."—*The Rambler*.

"Contains a considerable amount of information of a very valuable kind, on a variety of subjects, that in ordinary routine of education are too much overlooked, an acquaintance with which is every day becoming more and more indispensable. They are gems which cannot fail to vegetate in the mind, to fructify in the head, and eventually to produce a fourfold reward to him who labours in the acquisition of them."—*Sunday School Magazine*.

"Calculated to instruct any one of common intelligence on every known topic of importance, and to start him with a mind stored with the accumulated learning of 6000 years."—*The Mirror*.

"A valuable little publication, full of information in a small compass, creating an appetite for deeper investigation."—*Bell's Life*.

Any Lady or Gentleman, engaged in Education, not already using these Books, may have a Specimen Copy sent gratis on written application to the Publisher.

PART ONE of a New Issue of the LIFE OF NAPOLEON THE FIRST.

By SIR WALTER SCOTT.

TO BE COMPLETED IN NINE FORTNIGHTLY PARTS.

"What could now be more delightful to me than leisurely and calmly to sit down and listen to the discourse of such a man, while clearly, truly, and with all the skill of a great artist, he recalls to me the incidents on which through life I have meditated, and the influence of which is still daily in operation?"—*Goethe*.

ADAM & CHARLES BLACK, Edinburgh. HOULSTON & STONEMAN, London.

NEW WORK BY FANNY FERN.

Just ready, price 2s. with a Frontispiece and Title by BIRKET FOSTER,

R U T H A L L :

A DOMESTIC STORY OF THE PRESENT DAY.

By FANNY FERN.

"This story is exciting great interest here, being Fanny Fern's first attempt at a long story. It is also thought by some to be the story of her own early life. Some of the scenes are delineated with touching pathos, others display the vigorous flashes of satire so natural to her when vice or meanness fall under her lash."—*New York Correspondent*.

London: HOULSTON & STONEMAN, 65, Paternoster-row; and WM. S. ORR & Co. Amen-corner.

THE EMPEROR NAPOLEON AT ELBA.

Now ready, and at all the Libraries, One Volume, 8vo. cloth, with coloured Illustrations, 12s.

RUSSIA AND HER CZARS.
 By E. J. BRABAZON,
 Author of 'Outlines of the History of Ireland,' 'Tales from the History of the Muslims in Spain,' &c. &c.

Just published, cloth boards, price 2s.
POLITICAL SKETCHES:
Twelve Chapters on the Struggles of the Age.
 By Dr. CARL RETSLAG,
 Dr. Phil. of Berlin, late Professor of Philosophy in the University of Bostock.

"Sed dux, atque imperator vite mortalium, animus est." *Sallust.*
THE PHILOSOPHICAL TENDENCIES OF THE AGE.
 Being Four Lectures delivered at Edinburgh and Glasgow.
 By J. D. MORELL, M.A.

Author of 'An Historical and Critical View of the Speculative Philosophy of the Nineteenth Century,' 'Philosophy of Religion,' 'The Analysis of Sentences,' &c. &c.
 8vo. cloth, Cheap Edition, price 3s.

THEOBALD'S BIBLE EXERCISES;
 or,
Scripture References for Schools and Families.
 The principle is simple: in most cases the chapter is given, and the pupil is required to add (in a space left) the verse or verses applicable to the subject. These Exercises are thus adapted both to individual teaching and the Bible Classes.
 A Specimen Sheet sent free on receipt of a postage stamp.
 Post 4to. price One Shilling.
 London: ROBERT THEOBALD, 26, Paternoster-row.

Price 3s. 6d. boards.

 Simpkin, Marshall & Co. Stationers' Hall-court.

NEW ETON GREEK GRAMMAR.
 Price 1s. cloth, lettered.
THE NEW ETON GREEK GRAMMAR.
 Translated, with Permission, by the Rev. W. KOUTLEDGE, D.D.
 This is believed to be the only English edition of the entire Greek Grammar as now used at Eton, comprising the accidence, as lately reconstructed, and Wordsworth's admirable Syntax; and is thus substantially identical with the Greek Grammar used at Harrow, Manchester, Rugby, and all other public or private schools in England.
 London: George Routledge & Co., 2, Farringdon-street. Eton: E. P. Williams.

Just published, Second Improved Edition, in 1 thick vol. 12mo. (400 pages), bound in cloth, price 5s.

HUGHES'S READING LESSON BOOKS.

—Mr. EDWARD HUGHES, Head Master of the Royal Naval Lower School, Greenwich Hospital, begs respectfully to direct public attention to his Series of

FIVE READING LESSON BOOKS,

well illustrated, and suited to the educational requirements of the present day.

These Books are carefully graduated, so as to lead the pupil step by step from the observation of the simplest to the comprehension of the more complex phenomena of Nature. They are now being practically tested in the school under the Editor's care. The First Book, which is now ready, 12mo. 448 pp. price 3s. 6d. contains—

1. How to get Knowledge, and the Use of Books.
2. Scientific Biography.
3. Physical Geography.
4. Geology and Metallurgy.
5. Vegetable Physiology.
6. Animal Physiology.
7. Natural History and Ethnology.
8. Political and Domestic Economy.
9. Chemistry and its Applications.
10. Arts and Manufactures.
11. Mechanics and Mechanism.
12. Natural Philosophy.
13. Astronomy.
14. Fine Arts.
15. Literature.

Influenced by the idea that no individual could do complete justice to the numerous and varied regions of knowledge necessary to be surveyed in such a series, Mr. HUGHES has sought, and obtained, the co-operation of men eminent in science and literature, as also of well-known and valued practical educators. In this way their varied and practical will go hand in hand, and correct each other. The articles are written by—

The names of the contributors are a sufficient guarantee that the matter of the books will be of the highest class, and it will be the Editor's business to see that the form in which the various articles are presented shall be suitable for general instruction. The experience he has already had in preparing school-books, and the success which has attended his labours, inspire him with a confident hope that this Series will both supply an admitted want, and give general satisfaction.

Also, just published, price 3s. 6d.
OUTLINES OF PHYSICAL GEOGRAPHY, descriptive of the Inorganic Matter of the Globe, and the Distribution of Organized Beings. Fifth Edition, 12mo. with Coloured Maps, and an Etymological Appendix on Geographical Names. By Dr. ROBERT GORDON LATHAM, F.R.S.

Arthur Hall, Virtue & Co. 25, Paternoster-row.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition to the centre and margin of the picture, and have their visual and chemical acting fool coincident.

Great Exhibition Jurors' Report, p. 274.
"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.
A. Ross, 2, Featherstone-buildings, High Holborn.

THE IODIZED COLLODION, manufactured by J. B. HOCKIN & CO. 293, STRAND, LONDON, still remains unrivalled for sensitiveness and density of *Negative-plates* all others in its keeping qualities and uniformity of constitution.—Albumenized Paper, 17s. by 11, 5s. per quire; Waxed ditto, 7s., of very superior quality.—Double Achromatic Lenses, equal in all points to those of any other manufacturer: Quarter Plate, 2s. 2s.; Half Plate, 6s.; Whole, 10s.—Apparatus and pure Chemicals of all descriptions.

Just published, "PRACTICAL HINTS on PHOTOGRAPHY," by J. B. HOCKIN. 3rd edition, price 1s.; per post, 1s. 4d.

COLLODION PORTRAITS and VIEWS, obtained with the greatest ease and certainty, by using BLAND & LONG'S preparation of SOLUBLE COTTON. Certainty of uniformity of action over a lengthened period, combined with the most faithful rendering of the half-tones, constitute this a most valuable agent in the hands of the Photographer.

Albumenized Paper, for printing from glass and paper negatives, 5s. per quire.

The PNEUMATIC PLATE-HOLDER for Colloid Plates. Waxed and Iodized Papers of tried quality.

Instruction in the Processes.
BLAND & LONG, Opticians and Photographical Instrument Makers, and Operative Chemists, 153, Fleet-street, London.

*** Catalogues sent on application.

X-YLO-IOIDIDE of SILVER, exclusively used at all the Photographic Establishments.—The superiority of this preparation is now universally acknowledged. Testimonials from the best Photographers and principal scientific men of the day, warrant the assertion that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action. In all cases where a quantity is required, the two solutions may be had at Wholesale prices separately in Bottles, in which state it may be kept for years and exported to any climate. Full instructions for use.

Caution.—Each Bottle is stamped with a Red Label bearing my name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to counterfeit which is felony.
CYANOGEN SOAP, for REMOVING all kinds of PHOTOGRAPHIC STAINS. The genuine is made only by the inventor, and is secured with a red label bearing this signature and address, RICHARD W. THOMAS, CHEMIST, 10, PALL MALL, Manufacturer of pure Photographic Chemicals; and may be procured of all respectable Chemists, in Pots, at 1s., 2s., and 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-yard; and Messrs. Barclay & Co. 55, Farringdon-street, Wholesale Agents.

PHOTOGRAPHIC CAMERAS of EVERY DESCRIPTION CAN BE HAD AT

W. C. URQUHART, Secretary.

ESTABLISHED 1838.

VICTORIA LIFE ASSURANCE COMPANY, No. 18, KING WILLIAM-STREET, CITY.

At the recent Division of Profits the Assets were valued at £176,863

The Liabilities at £144,371

Leaving a Surplus for division of £32,492

The Reversionary Bonuses to the Assured averaged 53 per cent. on the amount of premiums paid by them.

The business of the Company embraces every description of risk connected with Life Assurance.

Loans continue to be made to Assurers on undoubted Personal or other Security.

WILLIAM RAYFAR, Actuary.

MUTUAL LIFE ASSURANCE

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

Head Office—26, ST. ANDREW-SQUARE, Edinburgh.

London—126, BISHOPSGATE-STREET.

Instituted 1831.

Incorporated by Special Act of Parliament.

The Profits are divided every Three Years, and wholly belong to the Members of the Society. The next division takes place at 1st March, 1856.

EXAMPLE OF ADDITIONS

On a Policy for 1,000l., dated 1st March, 1832.

1,523l. 8s. will be payable if it become a claim during the current year, after payment of this year's Premium. This is an addition of more than Fifty per Cent. on the Sum Assured, and averages 2l. 3s. 7d. per cent. per annum.

Supposing such a Policy to have been effected at the age of thirty, the additions might now be surrendered for a present payment of 221l. 7s. 10d., or if applied in reduction of the future Premium, would reduce the Premium from 25l. 10s. 10d. to 23s. 4d.; and even this small payment must be reduced every Three Years during the subsistence of the Policy.

AMOUNT of EXISTING ASSURANCES. £4,234,598

ANNUAL REVENUE 152,615

AMOUNT of ACCUMULATED FUND 839,354

Copies of the Annual Report, Forms of Proposals, and all information may be had on application at any of the Society's Offices in Town or Country.

W. COOK, Agent.
126, Bishopsgate-street, London.

MITRE GENERAL LIFE ASSURANCE AND ANNUITY ASSOCIATION.

No. 23, Pall Mall, London. Established 1845.
(With which is united the Business of the *Ægis Assurance Office*, late of 41, Moorgate-street.)

This Society offers the option of Mutual Assurance with Share of Profits; or of very moderate rates under the guarantee of a large Protective Capital.

The Profits are either added to the Policy, or paid in cash, or to reduce the Annual Premium; while in the Non-profit Branch, the low rates, as compared with those of pure Mutual Offices, are equivalent to an immediate Bonus of from 30 to 50 per cent. of the Amount Assured.

SPECIAL FEATURE.—The annuities granted by the Mitre increase periodically on the Mutual System. All expenses of the Annuity Deed are defrayed by the Association.

WILLIAM BRIDGES, Secretary.

FAMILY ENDOWMENT, LIFE ASSURANCE AND ANNUITY SOCIETY,

12, Chatham-place, Blackfriars, London.
Established 1845.
CAPITAL £500,000.

Directors.
William Butterworth Bayley, Esq., Chairman.
John Fuller, Esq., Deputy-Chairman.
Lewis Burroughs, Esq., Edward Lee, Esq.,
Robert Bruce Chichester, Esq., Colonel Ouseley,
Major Henderson, Major Turner,
Charles Henry Latouche, Esq., Joshua Walker, Esq.
An Annual Bonus is allowed to parties who have made Five Annual Payments on Policies taken out on the Profit Scale. That for the current year is 20 per cent. in reduction of the Premium. Endowments and Annuities granted as usual.

BRANCH.
The extensive Assurance Business of the Agra and United Service Bank has been transferred to this Office, and the Society has Branch Establishments or Agencies at Calcutta, Madras, Bombay, Agra, and Hong Kong. JOHN CAZENOVE, Secretary.

ARGUS LIFE ASSURANCE COMPANY,

39, THROGMONT-STREET, BANK.
THOMAS FARNCOMB, Esq., Alderman, Chairman.
WILLIAM LEAF, Esq., Deputy-Chairman.

Richard E. Arden, Esq., John Humphrey, Esq., Ald.
Edward Bates, Esq., Rupert Ingleby, Esq.,
Thomas Camplin, Esq., Thomas Kelly, Esq., Ald.
James Clift, Esq., Jeremiah Pilcher, Esq.,
Lewis Pock, Esq.

Physician.—Dr. Jefferson, 2, Finsbury-square.
Surgeon.—W. Coulson, Esq., 2, Frederick's-place, Old Jewry.
Consulting Actuary.—Professor Hall, M.A. of King's College.

ADVANTAGES OF ASSURING WITH THIS COMPANY.
The premiums are on the lowest scale consistent with security. The Assured are protected by an ample subscribed capital—an assurance fund of nearly 400,000*l.*, invested on mortgage and in the Government stocks—and an income of 80,000*l.* a year.

Age.	Premiums to Assure £100.		Whole Term.	
	One Year.	Seven Years.	With Profits.	Without Profits.
20	£0 17 8	£0 19 9	£1 15 10	£1 11 10
30	1 13	1 2 7	2 5 5	2 0 7
40	1 5 0	1 6 9	3 0 7	2 14 10
50	1 14 1	1 19 10	4 6 8	4 0 11
60	3 2 4	3 17 0	6 12 9	6 0 10

Mutual Branch.

Assurers on the Bonus system are entitled, at the end of five years, and afterwards annually, to participate in four-fifths, or 80 per cent. of the profits.

The profit added to each Policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.

At the first division a return of 20 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 10 to 25 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit for seven years, or one-third of the Premium may remain for life as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid in one month after proofs have been approved. Loans upon approved security.

No charge for Policy Stamps.

Medical Attendants paid for their reports.

Persons may proceed to or reside in any part of Europe or British North America without extra charge.

The Medical Officers attend every day at Throgmont-street, at a quarter before 2 o'clock. E. BATES, Resident Director.

BOOKBINDING.—W. HOLMES, Practical

Bookbinder, 135, Oxford-street, London. Books bound in Morocco, Russia, Calico, or any of the best materials, at the lowest terms. Gentlemen waited upon with patterns. Estimates given for large or small Libraries.—Address, 135, Oxford-street.

BOOKBINDING with the PATENT INDIA-

RUBBER BACK, which furnishes a flexible hinge to every leaf of the book, causes it to lie flat, and open freely, without strain or breaking, as in the old binding. All kinds of binding, including music, maps, engravings, albums, manuscripts (which can be bound in no other way), promptly executed by J. ROWBOTHAM & Co., 70, Castle-street East, Berners-street. A list of prices to be had on application.

LIQUID INDIA RUBBER.—This superior

substitute for either gum or paste may be had in its purest state by J. ROWBOTHAM & Co., India-Rubber Bookbinders, 70, Castle-street East, Berners-street, in tin canisters, 1*lb.*, 2*lb.*, and 4*lb.* each, or by order of any Bookseller or Druggist. N.B.—Brushes for using the Liquid India Rubber, 6*d.* each. A list of prices for bookbinding may be had on application.

CAMP LANTERNS for the CRIMEA, com-

bing every recent improvement, adapted for burning the Patent Fuse Candles, which can be instantly ignited as a lucifer. These Lanterns are equally suitable for warehousemen and others. Price 9*s.* each; Fuse Camp Candles, 1*s.* 3*d.* per box. Sold by all Lamp-Dealers; by F. CLARKE, 55, Albany-street, Regent's Park; and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES,

can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1*s.* 3*d.* per box, by all Grocers, Candle-Dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made

so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and can be as quickly removed and used for a Hand-Lantern in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The appearance and fit are equal to that of a carriage lamp of superior finish, but the price being less than half, these lamps are placed within the reach of every person requiring a light when driving.—Price 12*s.* 6*d.* each, at any of the Lamp-Dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by the Patentee, S. CLARKE, 55, Albany-street, Regent's Park, London.

MODERATOR LAMPS.—IMPROVED

PRINCIPLE.—For simplicity, strength and general finish, the LAMPS sold by THOMAS PEARCE & SON are far superior to any other kind. They are all made expressly for their house and trade, before they leave the Manufactory, and have important improvements peculiar to only these Lamps. The patterns are singularly uncommon and beautiful, and for art, elegance and good taste, the assortment is quite unexceptionable, many of the designs belonging exclusively to T. PEARCE & SON.

Direct Importers of Oil of the finest quality.
T. PEARCE & SON, 23, Ludgate-hill.

PURE FRENCH COLZA OIL, 4*s.* 9*d.* per

gallon.—Messrs LEMAIRE & Co. Manufacturers, Paris.—Sole Depot in England, the London Soap and Candle Company, 76, New Bond-street.

assortment of superior Hair and other Brushes for the
Toilet.

DURABILITY OF GUTTA PERCHA
TUBING.—Many inquiries having been made as to the
Durability of Gutta Percha Tubing, the Gutta Percha Company
have pleasure in giving publicity to the following letter:—FROM
SIR RAYMOND JARVIS, Bart., VENEZOR, ISLE of WIGHT.
—Second Testimonial.—"March 10th, 1882.—In reply to your letter,
received this morning, respecting the Gutta Percha Tubing for
Pump Service, I can state, with much satisfaction, it answers per-
fectly. Many Builders, and other persons, have lately examined it,
and there is not the least apparent difference since the first
laying down, now several years; and I am informed that it is to be
adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the COR-
ROSIVE WATER of the ISLE of WIGHT has no effect on
Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

TRY BATES'S VALUABLE and CELE-
BRATED IRISH EXHIBITION RAZORS, only Two
Shillings each; by post, Two-and-Sixpence, prepaid. They are
the best now made for keen shaving. Manufactured by JAMES
BATES, at 62, South George-street, Dublin.

USE BARKER'S RAZOR PAPER for
Wiping the Lather from the Razor while Shaving; by
which simple process alone—giving not the least trouble—Razors,
once properly set, instead of getting dull by use, improve in keen-
ness and evenness, and are constantly preserved in perfect shaving
condition.
"It is an invention that should be patronized on every gen-
tleman's dressing-table; and in saying thus much we speak from
long and comfortable experience."—*Morning Advertiser*.
Sold (in Packets of 6d. and 1s.; and Boxes, at 3s. and 6s.) by all
Papers, Stationers, Chemists, &c., and by the Inventor and
Sole Manufacturers, F. BARKER & SONS, Stationers, Hammer-
smith; who will, on receipt of sixteen postage stamps, return a
Shilling Packet for trial, post-free.

DR. ARNOTT'S SMOKE-CONSUMING
FIRE-GRATE is manufactured by F. EDWARDS, SON &
Co., 42, Poland-street, Oxford-street; where one may be seen in
daily use. The advantage of this grate consist in the smoke
being perfectly consumed, no chimney sweeping being required,
and a saving of from 40 to 50 per cent. being effected in the cost of
fuel. Prospectuses, with Testimonials, sent on application.

RUPTURES.—BY ROYAL LETTERS PATENT,
WHITE'S MOC-MAIN LEVER TRUSS is
allowed by upwards of 200 Medical Gentlemen to be the most
effective invention for the cure and treatment of HERNIA. The use
of a steel spring, so often hurtful in its effects, is here avoided; a soft
bandage being worn round the body, while the requisite resisting
power is supplied by the MOC-MAIN PAD and PATENT LEVER
fitting with so much ease and closeness that it cannot be detected,
and must be worn during the day, and at night, if required. The
Truss (which cannot fail to fit) forwarded by post, on the
circumference of the body, two inches below the hips, being sent to
the Manufacturer, Mr. WHITE, 225, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c.
For VARICOSE VEINS, and all cases of WEAKNESS
and SWELLING of the LEGS, SPRAINS, &c. They are porous,
light in texture, and inexpensive, and are drawn on like an
ordinary stocking. Price, from 7s. 6d. to 16s. each; postage 6d.
MANUFACTORY, 225, PICCADILLY, LONDON.

INFANTS' NEW FEEDING BOTTLES.—
From the *Lancet*.—"We have seldom seen anything so
beautiful as the nursing bottles introduced by Mr. Elam, of Ox-
ford-street. They are adapted to milk, bisouits, and all kinds of
food; and, whether for weaning, rearing by hand, or occasional
feeding, are quite unrivalled."—BENJAMIN ELAM, 196, Ox-
ford-street, 7s. 6d. The bottle and mouthpiece are stamped with
my name and address.

DECAYED TEETH and TOOTH-ACHE.—
Patronized by Her Majesty the Queen, and H.R.H. Prince
Albert.—Mr. HOWARD'S PATENT WHITE SUCCEDANEUM
for filling decayed teeth, however large the cavity. It is placed in
the tooth in a soft state, without any pressure or pain, and in a
short time becomes as hard as the enamel, lasting many years.
Sold by Sanger, 220, Regent-street; Sanger, 150, and Hannay, 63,
Oxford-street; Butler, 4, Cheapside; Johnston, 63, Cornhill; and
all Chemists and Medicine Vendors in the Kingdom. Price 2s. 6d.,
with full directions for use enclosed.

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.? If so, Miss GRAHAM'S NIOU-
KRENE is unfailing in its efficacy. It reproduces the Hair when
lost by disease or decay, prevents its falling off, effectually checks
greyness, strengthens weak hair, and is guaranteed to produce
Whiskers, Moustachios, &c. in three or four weeks. For beautify-
ing the hair, and sustaining its curling powers, it has no equal.
Sent post free on receipt of 24 penny post stamps, by MISS
GRAHAM, 10, Chichester-place, London. Extracts
from Testimonials.—No. 569: "My whiskers are greatly im-
proved." J. Short, Dudley.—No. 1327: "It has produced hair
where I was bald." W. Morgan, Milford.—No. 3,313: "My hair has
thickened since using it." Miss Cowie.—No. 619: "I have a full
pair of whiskers." H. Robb, Hertford.

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.? No other compound for the Hair has
maintained such enduring celebrity as EMILY DEAN'S
CRINILENE. It is guaranteed to produce Whiskers, Mous-
tachios, Eyebrows, &c. in a few weeks, and restore the Hair in
baldness, from whatever cause, strengthen it when weak, prevent
its falling off, and effectually check greyness in all its stages. For
the nursery, Dr. Williams says, "It is invaluable." Price 2s. per
Package (elegantly perfumed), sent post free on receipt of 24
penny postage stamps, by MISS DEAN, 37A, Manchester-street,
Gray's Inn-road, London. Sold by every Chemist in the Kingdom.
"One fortnight it produced a beautiful set of moustachios,"
H. Adams.—"It has prevented the falling off of my hair."
"It has quite checked the greyness that was coming on." Mrs. Elder.

TO PARENTS AND GUARDIANS.
THE return of Youth to the respective Boarding-
schools induces a solicitude for their Personal Comfort and
Attraction. Now it is that
ROWLANDS' MACASSAR OIL,
for accelerating the growth and for improving and beautifying
the hair,
ROWLANDS' KALYDOR,
for improving the Skin and Complexion, and removing Cutaneous
Eruptions, and
ROWLANDS' ODONTO,
or PEARL DENTIFRICE, for rendering the Teeth beautifully
white and preserving the Gums, are considered indispensable ac-
companiments for the attainment of these Personal Advantages so
universally sought for and admired.
Sold by A. ROWLAND & SONS, 20, Hatton-garden, London;
and by Chemists and Perfumers.
BEWARE OF SPURIOUS IMITATIONS.

BEAUTIFUL HAIR, WHISKERS, &c., are
INVARIABLY PRODUCED IN TWO OR THREE
WEEKS by COUPELLE'S CELEBRATED CRINUTRIAR,
which is universally acknowledged as the only preparation to be
relied upon for the unfailing production of Hair, as also
checking Greyness, Baldness, &c., and rendering the Hair luxuriant,
curly, and glossy.—Mr. Williams, 5, Leinster-street, Liverpool. "I can
now show as fine-a-head of hair as any person, solely from using
your Crinutriar."—Sergeant Craven, Longford Barracks, Ireland.
Through using your Crinutriar, I have an excellent Moustache,
which I had before despaired of."—Mrs. Carter, Pangbourne,
Berks. "My head, which was quite bald, is now covered with new
hair."—Price 3s. per packet, through all Chemists and Perfumers;
or sent post free for 24 penny stamps, by ROSALIE COUPELLE,
69, Castle-street, Newmarket-street, Oxford-street, London.—Guard
against imitations under closely similar names. Twenty pages of
Testimonials, with list of Country Agents, post free for two stamps.

METCALFE & CO.'S NEW PATTERN

Caution.—Beware of the words "From Metcalfe's," adopted by
some houses.
METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DR. DE JONGH'S
LIGHT BROWN COD LIVER
OIL.

PREPARED FOR MEDICINAL USE IN THE LOFFODEN
ISLES, NORWAY, AND PUT TO THE TEST OF CHEMICAL
ANALYSIS. PRESCRIBED BY EMINENT MEDICAL MEN
AS THE MOST EFFECTUAL REMEDY FOR CONSUMPTION,
BRONCHITIS, ASTHMA, GOUT, RHEUMATISM,
SOME DISEASES OF THE SKIN, RICKETS, INFAN-
TINE WASTING, GENERAL DEBILITY, AND ALL SCRO-
FULOUS AFFECTIONS—effecting a cure or alle-
viating suffering much more rapidly than any
other kind.

PURE AND UNADULTERATED.

TESTIMONIAL FROM
ARTHUR H. HASSALL, M.D. F.L.S.
Member of the Royal College of Physicians,
Physician to the Royal Free Hospital,
Author of 'Food and its Adulterations,' &c. &c.

"Dear Sir,—I beg to return my acknowledgments for the copy
of your Work on Cod Liver Oil, with which you have favoured me.
I was already acquainted with it, and had perused it some
time previously with considerable gratification, especially the
chapter devoted to the consideration of the adulteration of Cod
Liver Oil.
"I have paid, as you are aware, much attention to the subject
of the adulteration of drugs. Amongst the articles examined, I
have not overlooked one so important as Cod Liver Oil, and this
more particularly, since it is a very favourite remedy with me,
and is, moreover, so liable to deterioration by admixture with other,
especially inferior Fish Oils. I may state that I have more than
once, at different times, subjected your Light Brown Oil to che-
mical analysis, and this unknown to yourself, and I have always
found it to be free from all impurity, and rich in the constitu-
ents of bile.
"So great is my confidence in the article, that I usually pre-
scribe it in preference to any other, in order to make sure of ob-
taining the remedy in its purest and best condition.
"I remain, yours faithfully,
(Signed) "ARTHUR H. HASSALL, M.D."
"Bentley-street, London, 1st December, 1884."

SOLD IN LONDON by ANSAR, HARFORD, & CO., 77, STRAND.
Dr. De Jongh's sole accredited Consignees and Agents for the
United Kingdom and the British Possessions, and sent by them,
CARRIAGE FREE, to all parts of town.
May be obtained in the Country, from respectable Chemists and
Vendors of Medicine. Should any difficulty be experienced in
procuring the Oil, Messrs. ANSAR, HARFORD & Co. will forward four
half-pint bottles to any part of England, CARRIAGE PAID, on receipt
of a remittance of 10s.
Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.;
Quarts (40 ounces), 9s.—IMPERIAL MEASURE.

CAUTION.—The bottles are labelled with Dr. De
Jongh's stamp and signature, without which none are genuine.
The Public are especially cautioned against frequent attempts
to induce them to purchase other kinds of Cod Liver Oil, under
the pretence that they are the same as Dr. De Jongh's, or
equally efficacious.

DR. BARRY'S HEALTH RESTORING
REVALENTIA ARABICA FOOD counteracts Dyspepsia
(Indigestion), Constipation and their consequences.—Andrew Ure,
M.D. F.R.S., London. These consequences are Nervous Bilious
and Liver Complaints, Acidity, Heartburn, Flatulency, Sick
Headaches and General Debility, Low Spirits, Cough, Asthma,
Insipient Consumption, Nausea, &c. It is, moreover, the best
food for infants, and invalids generally, as it never purges or
turns acid on the weakest stomach, nor interferes with a good
liberal diet, but imparts a healthy relish for lunch and dinner,
and restores the faculty of digestion and nervous and muscular
energy to the most enfeebled. Highly approved of by Drs.
Ure, Shorland, Harvey, Cantrill, Gattick, Wurzer, Lord
Stuart de Decies, and 50,000 other respectable persons, whose
health has been perfectly restored by it after all other means
of cure had failed.
In enesters, 1lb. 2s. 9d.; 2lb. 4s. 6d.; 5lb. 11s.; 12lb. 22s.; super-
refined, 1lb. 6s.; 2lb. 11s.; 5lb. 12s.; 10lb. 33s. The 10lb. and 12lb.
carriage free on receipt of Post-office order. Barry & Co.,
Carriage & Co., 77, Regent-street, London; Fortnum, Mason & Co., Fur-
veyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street;
339 and 461, Strand; 4, Cheapside; 68, Cornhill; 49, Bishopgate-
street; 55, Charing-cross; 54, Upper Baker-street; 63 and 150,
Oxford-street.

RUPTURES EFFECTUALLY CURED
WITHOUT A TRUSS!—All sufferers from this alarming
complaint are earnestly invited to consult or write to Dr. LESLIE,
as he guarantees them relief in every case. His remedy has been
successful in curing thousands of persons during the last twelve
years, and is applicable to every kind of single and double Rup-
ture, however bad or long-standing, in male or female of any age,
causing no confinement or inconvenience in its use whatever. Sent
post free to any part of the world, with full instructions for use,
on receipt of 7s. 6d. in postage stamps, cash, or post-office order,
payable at the General Post-office, to Mr. Herbert Leslie, 37A,
Manchester-street, Gray's Inn-road, London.—At home daily (ex-
cept Sunday) from 11 till 3 o'clock. A Pamphlet of Testimonials
sent post free on receipt of one postage stamp.

ANOTHER CURE of a NINE YEARS'
COUGH by
DR. LOCOCK'S PULMONIC WAFERS.
"29, High-street, Lynn.—Sir,—A Lady, who had a severe cough
for nine years, and could get nothing to allay it, from one box
Dr. Locock's Wafers is enabled to speak more freely, and her
cough is cured. (Signed) W. BARTLE."
Dr. LOCOCK'S WAFERS give instant relief, and a rapid cure
of Asthma, Coughs, and all disorders of the Breath and Lungs.
They have a pleasant taste. Price 1s. 14d., 2s. 9d., and 1s. per
box. Sold by all Druggists.

CHILBLAINS, RHEUMATISM, LUM-
BAGO.—Chilblains are prevented from breaking, and their tor-
menting itching instantly removed, by WHITEHEAD'S ESSENCE
of MUSTARD, universally esteemed for its extraordinary efficacy
in Rheumatism, Palsies, Gouty Affections, and Complaints of the
Stomach; but where this certain remedy has been unknown or
neglected, and the chilblains have actually suppurated or broke,
WHITEHEAD'S FAMILY CERATE will ease the pain, and very
speedily heal them.

CHILBLAINS.—WHITEHEAD'S ESSENCE OF MUSTARD.
"The Rev. the Rector of Borton, Norfolk, to Mr. R. Johnston,
Huntingdon Rectory, Radstock, Bath."
"Sir,—Last winter my little boy was very much trou-
bled with chilblains, which scarcely ever allowed him to sleep
at night, and which ultimately broke and covered his feet with
wounds. I tried all the outward applications I could hear of
without the slightest success. This year the chilblains appeared
as bad or worse than before, and I was obliged to try Whitehead's
Essence of Mustard, which I purchased from Mr. Johnston. I
course, when changing to catch my eye on the advertisement of
Whitehead's Essence of Mustard, I made a trial of it, and though
the chilblains were on the point of breaking, the first application
stopped the itching, and in a day or two they were completely
cured. It is my duty to testify to the efficacy of this remedy, and
advise that I may assist in making known a specific for a com-
plaint which is both so general among children and so distressing to
them.—I remain, yours obliged, WHITEWELL ELWIN."
Prepared only by the Executors of the late Robert Johnston,
in bottles, 2s. 9d., each, and the 10lb. bottles, 10s. 6d., each,
1s. 14d. each, by Messrs. Barclay & Sons, 95, Farringdon-street,
London, wholesale agents; and by every Druggist and Medicine
Vendor in the United Kingdom. The genuine has the name,
"R. Johnston," engraved on the stamp.

DEAFNESS and NOISES in the HEAD.—
Institution for the Cure of Deafness, 9, Suffolk-place, Pall
Mall, London. Instant and permanent restoration of hearing
guaranteed, without the use of ear-trumpets, instruments, or
causing one moment's inconvenience to the most aged or nervous
sufferer. Dr. HUGHOTON'S new and extraordinary discovery, by
one consultation enables deaf persons of either sex to hear im-
mediately with perfect ease the lowest whisper, and magically
removes all singing in the ears. Hospital and private testimonials
and certificates from the most eminent Physicians and Surgeons
in England, in whose presence deaf persons have been cured, and
many hundreds of private patients cured can be seen or referred
to on application, 11, St. Paul's Church-yard, London. Dr. Hugh-
Houghton, Member of the London Royal College of Surgeons, May
2, 1845; Licentiate of the Apothecaries Company, April 30, 1846.
Just published,
"SELF-CURE OF DEAFNESS," for country patients; a stop to
empiricism, quackery, and exorbitant fees, sent on receipt of seven
stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

KEATING'S COUGH LOZENGES.—
Upwards of Forty Years' experience has fully confirmed
the superior reputation of these Lozenges, in the cure of Asthma,
Winter Cough, Hoarseness, Shortness of Breath, and other Pul-
monary Maladies.
Prepared and sold in boxes, 1s. 14d., and tins, 2s. 9d., 4s. 6d., and
10s. 6d. each, by Thomas Keating, Chemist, &c., No. 79, St. Paul's
Church-yard, London.
The Testimonials of their efficacy are too numerous for pub-
lication.

KEATING'S COD LIVER OIL, imported
Direct from Newfoundland, of the finest quality, pale, puri-
fied, and free from all impurities. Imperial Measure, half-pints, 2s.; pints,
3s. 6d.; quarts, 6s. 6d.; five-pint bottle, 15s.
Orders from the country should expressly state "KEAT-
ING'S COD LIVER OIL."

A LIEUTENANT of DRAGOONS CURED OF
RHEUMATISM by HOLLOWAY'S OINTMENT and
PILLS. The Officer, who is in the 4th Dragoon Regiment, states that Hol-
loway's Pills and Ointment have cured him of rheumatism, which
appeared to be incurable, as neither sea-bathing, vapour-baths,
nor preparations vaunted as sure remedies, did him any good, and
the treatment of the doctor, after several months' trial, was with-
out success. He is now perfectly cured, and has taken these Pills,
and rubbing the Ointment into the complaining part twice a day,
which effectually cured him in the course of six weeks. The truth
of this statement can be vouched for by Mr. J. B. Stratman, of
Boile-Duc.—Sold by all Druggists; and at Professor H. H. H. Es-
tablishment, 244, Strand, London, and at 80, Maiden-lane, New
York.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

Parents, who prefer it, may pay inclusive terms, viz., 48 guineas and 5*s.* guineas, according to age, covering every charge, except books and medical attendance.

There are several excellent Exhibitions to Oxford, Cambridge, and Durham.

DAY BOYS, whose Parents reside in, or within 10 miles of Ludlow, are free on payment of 3*l.* per annum, to the ordinary teaching of the Schools.

BRIGHTON.—EDUCATION.—There are twelve Young Ladies in a First-Class Establishment where only VACANCIES are received. A Parisian Governess resides in the house. Signor F. Lablache, Herr Kuhe, Messrs. E. de Paris, Michau, and other eminent Professors, attend. References to Parents of Pupils.—For Terms, which are inclusive, address Misses B., care of Mr. Rolandi, 20, Berners-street, Oxford-street, London. Here Prospectuses can also be had.—A Governess Pupil required.

EDUCATION in GERMANY.—A LEGAL GENTLEMAN, of high standing, residing near one of the largest and pleasantest cities in Rhenish Prussia, wishes to RECEIVE TWO YOUNG ENGLISH GENTLEMEN of good family. The pupil to their acquiring a correct knowledge of the German language, and to their completing the Education of a Scholar, and at the same time imparting a thorough knowledge of the German language. Good Masters in every branch of instruction can be obtained at moderate charges. The Advertiser's residence is pleasantly situated, and commands a fine view of the Rhine.—Full particulars, references and terms can be obtained by letter, post paid, addressed H., 340, Strand.

EDUCATION in GERMANY.—A RARE OPPORTUNITY.—One or two English Children, between the ages of six and fourteen years, will be received into the Family of one of the Professors in the University of Berlin, where they will have all the comforts of a home, where all possible attention will be paid to their acquiring a correct knowledge of the German language, and where the best facilities will be furnished for their pursuing other studies. For references, terms, and other information, application may be made to Dr. Märcker, Oranienburger-str., 59, Berlin.

GERMAN, ITALIAN, AND FRENCH.—DR. ALTCHUL, Member of the Philological Society of London, Examiner B. College of Professors, gives LESSONS in the above-mentioned LANGUAGES and LITERATURE. Pupils may study TWO Languages in the same Lesson, without any addition to his terms. 2, CHANDOS-STREET, CAVENDISH-SQUARE.

GERMAN.—WILHELM KLAUER-KLAT.—TOWSKI, of Schwerin, in Mecklenburg, Author of the German Manual for the Young, &c., proposes to RESUME his teaching, and will be limited to six members. Fee, 2*l.* for a course of two months, twice a week.—Applications are requested to be addressed to No. 20, South Molton-street. Professor Klawer continues to give Private Lessons at his own, and at the pupil's residence.

TEDESCO.—Signor GUGLIELMO KLAUER-KLATOWSKI, già Professore in Lingua Tedesca nell'Accademia Pontificia, dà lezioni di Tedesco in casa sua, comincerà quanto prima un CORSO di LINGUA e di LETTERATURA TEDESCA mediante la lingua Italiana. Questo corso, da servir di pratica in ambedue le lingue, si farà due volte la settimana, ed ogni lezione sarà d'un'ora e mezzo, la mattina per le signorine, e la sera per signori. Le ore saranno regolate con la signorina, e la mattina per signori. Si daranno i richiedimenti, necessari dal Professore, No. 20, South Molton-street, Londra.

A LADY Twenty-six years of age, of superior Education, and who has had a few years' experience in tuition, is desirous of AN ENGAGEMENT as RESIDENT GOVERNESS. Hercomprehends Music, Pencil-Drawing, French, German, and the Rudiments of Latin.—Address, 935, Midland Counties Herald Office, Birmingham.

VISITING GOVERNESS.—A LADY, highly educated, is desirous of forming an engagement for two or three months of the year as COMPANION or FINISHING GOVERNESS. She is fully qualified to instruct in English, French, Italian, Music and Singing, and all the usual branches. Terms not a first consideration.—Address L. L., Bird's Library, Blenheim-terrace, Abbey-road, St. John's Wood.

A LADY, experienced in the Tuition of Pupils of various ages from 5 to 20, desires an ENGAGEMENT in a GENTLEMAN'S FAMILY, in or near London, for two or three months, and two Afternoons in each week. She is highly qualified to instruct in English, French, Italian, Music, and Singing, and all the usual branches, and also instructs in Drawing in several styles, Flower Painting, Music, French acquired in France, Italian, and German to beginners. She is a decided Churchwoman, and can offer most satisfactory references as to family and ability. A liberal salary required.—Address to DELTA, Mrs. Wright's, Stationer, Croom's-hill, Greenwich.

AN ENGLISH TEACHER, of considerable experience, who can obtain the highest testimonials of character and efficiency, wishes to meet with an engagement as ENGLISH MASTER in a School or College in or near PARIS. He can read and translate French with ease. His present duties close at Easter, when he can, at once, enter on a new engagement.—Address J. G., 18, Ormond-road, Old Kent-road, London.

TO GENTLEMEN, DIRECTORS OF PUBLIC COMPANIES, &c.—WANTED, an ENGAGEMENT as SECRETARY, or some similar appointment, suitable for a Gentleman. Occupation being the chief object, no objection for a time to a London residence.—For particulars and references the best.—Address Z. A., Brooke's Newspaper Office, 24, Old Cavendish-street, Cavendish-square.

AS PRIVATE SECRETARY to a Nobleman or Gentleman, or as Secretary to an Institution.—The Advertiser, age 24, who holds a responsible Government Appointment, being at liberty early in the afternoon, is desirous of an ENGAGEMENT in either of the above capacities. He has acted as Private Secretary to a late Diplomatist; has received a Classical Education; understands French, German, and Spanish; is well experienced in Correspondence and Accounts, and is prepared with satisfactory references as to competency and respectability.—Address G. H., Post-office, Stockwell Green.

BRIGHTON.—A HOME for INVALID and ORPHAN CHILDREN of the HIGHER CLASSES, in a superior mansion, in the most delightful and healthy part of Brighton. Only a limited number taken, and from the age of one month to twelve years. A Governess, Nurses, and every suitable accommodation. References permitted to several eminent medical men and clergymen.—Address to A. C. L., care of Mr. Wallis, 5, Bartholomews, Brighton.

TO AUTHORS, EDITORS, and PUBLISHERS.—A LADY, desiring regular or occasional Literary Occupation, in which she has already been engaged, offers her services to arrange and prepare, or copy, Manuscripts for the press, and to correct proofs. She can undertake Translations from the French and Italian languages, and is sufficiently acquainted with some others to verify quotations from them, and to secure accuracy in the printing of such.—Apply, by letter only, to X. Y. Z., 20, Park-walk, Chelsea.

AS COPYIST, &c.—A Person having several hours a day unoccupied, would be glad to engage himself to any Gentleman requiring such services.—Address C. D., 91, Hercules-buildings, Lambeth.

TO PUBLISHERS.—An Experienced BOOK-KEEPER (double entry) and PRESS READER, well accustomed to the Publishing business, seeks a permanent engagement; or, being unoccupied after 2 p.m., would give four or five hours daily for a reasonable remuneration.—The advertiser has been much employed in the revision and preparation of MSS. for press, and speaks French.—First-rate references.—F. B., 1, Crane-court, Fleet-street.

BEDFORD CHARITY COMMERCIAL SCHOOL.—WANTED TWO ADDITIONAL ASSISTANT MASTERS, competent to teach English generally and the rudiments of the Latin Language.—Salaries to commence at 80*l.* per annum.—Applications and Testimonials to be addressed to George Hurst, Esq., Chairman of the Board of Trustees, on or before Tuesday, February 6th, and due notice will be given to the Gentlemen selected for Examination, as to the day when their presence will be requested.
By order of the Board,
GEORGE HURST, Chairman.
The Schools, Bedford, Jan. 24th, 1855.

AS COMPANION to an INVALID who requires assiduous care and delicate attention.—A Lady is recommended by one to whom her value is well known. Age about 30. Has travelled on the Continent.—Address Mr. B., care of Dr. Bence Jones, 30, Grosvenor-street, Grosvenor-square.

COMPANION for a VOYAGE WANTED.—A Gentleman, whose Son, aged 19, requires for his health a Sea Voyage (out and home) from three to six months, wishes to find him a COMPANION. This may meet the eye of some Father similarly situated. With such an one the Advertiser would be glad to arrange. Or, he would place his Son in the care of a Student or Professional Gentleman, to whom travel (which must be chiefly at Sea and fair remuneration might be desirable, and who, by education, manners, and morals, is fit for such a charge. Address, with real name and description, to M. S., care of Mr. Foster, Stationer, 114, Fenchurch-street.

TO PUBLISHERS.—WANTED, by the Advertiser, a Book, entitled 'CLAVIS VIRGILIANA,' published by Whittaker & Co.—Address Mr. T. GUNNEY, Jun., White-thorn House, Stoke Mandeville, Bucks.

HOWELL'S STATE TRIALS, 33 vols. and Index.—A COPY, in good condition, strongly half-bound in Russia, price 12*l.*—BENTON SEELY, 2, Hanover-street.

CONVERSAZIONE.—To SECRETARIES.—The Advertiser has a very interesting OPTICAL INVENTION, which he would be happy to exhibit at any Conversazione or numerously-attended Soiree, in Town or Country. The exhibition would in all cases be FREE, as the Advertiser wishes to make the invention generally known. Secretaries, and others wishing to secure the exhibition for their meetings, are requested to send particulars to T. H. C., 13, Bayham-place, King-street, Camden Town.

BRITISH SHELLS and FOSSILS.—B. R. DANON, of Weymouth, Dorset, supplies collections of BRITISH SHELLS, FINE SPECIMENS, CORRECTLY NAMED, 100 Species for 52*s.* 6*d.*, 200, 6 guineas; 300, 12 guineas. An Elementary Collection of 50 SPECIES (100 specimens) for 15*s.* Specimens sent by post. Improved Dredges for Collecting Shells, Zoophytes, &c. Neat Labels for British Shells. List of British Shells, 6*d.* Collections, illustrating 100 genera of recent shells, 30*s.*; Ditto of 500, 100*l.*, 200*l.* Species, equally reasonable. Labels for recent shells.

FOSSILS.—Saurian Remains, Pentacrinite, Ophiura, Fish, Shells, &c., characteristic of the Blue Lias and other Oolitic strata. Elementary Collections of Fossils to assist in the study of Geology, 1*l.* to 6*l.* upwards. Labels for Fossil Shells.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyl-place.

DAQUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life &c. without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected.—*Athenæum*, July 22, 1854.

Mr. Mayall's portraits represent the high art of the daguerreotype; they are superior to the generality of such pictures as a delicate engraving is to a coarse woodcut.—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

HEALTH.—GYMNASTICS.

THE LONDON GYMNASIUM.—Capt. CHIOSSO (and Son), Professor of Gymnastics at University College School, 123, Oxford-street, near Regent Circus. FENCING, BROAD-SWORD EXERCISE, DRILLING.—PRIVATE LESSONS, and CLASSES.—Also at 21, New-road, corner of Gower-street, University. Private Establishment, 25, Baker-street, Portman-square.—Lately published, 'THE RATIONALE OF GYM-NASTICS,' price 1*s.* 6*d.*

To be had of Messrs. TURNER & Co. 12, Paternoster-row, London, by whom also Orders are received.

A CATALOGUE of Marbles, Bronzes, Stuccos, Wood and Ivory Carvings, Old Coins, Glass and Oil Paintings, Engravings, Woodcuts, Etchings, Valuable Books of Prints, and a Library of 7,000 Volumes, from the Collection of the late Augustus Klein, at Ansbach, Kingdom of Bavaria, which will be sold by Public Auction, at Ansbach, on the 30th February, 1855.

THE ROYAL ASSOCIATION FOR PROMOTION OF THE FINE ARTS IN SCOTLAND.

Committee of Management for the Year 1854-55.

The Right Hon. the EARL OF DALKEITH.
The Hon. LORD NEAVES.
The Hon. LORD ARDMILLAN.
Sir WILLIAM GIBSON-CRAIG, of Riccarton, Bart.
Sir WILLIAM JOHNSTON, of Arkhill.
GEORGE PATTON, Esq. Advocate.
DR. FARQUHARSON.
DAVID MACLAGAN, Esq. M.D.
ALEXANDER S. LOGAN, Esq. Sheriff of Forfarshire.
ALEXANDER ALLAN, Esq. Advocate.
DAVID SMITH, Esq. W.S.
JAMES GIBSON THOMSON, Esq.
ROBERT HORN, Esq. Advocate.
Professor CHILDESTON.

LINDSAY & ESSON, Esqs. Auditors.
J. A. BELL, Esq. Architect, Secretary and Treasurer.

THE ROYAL ASSOCIATION for the PROMOTION of the FINE ARTS in SCOTLAND, the first of the Societies now generally known in this country under the name of "Art-Unions," was founded in the year 1834, and was incorporated by Royal Charter in 1847. The promotion of Art, which, as its title bears, is the object of the Association, is effected by a system of co-partnership, in the following manner:

The Association is composed of Annual Subscribers of One Guinea and upwards, and the Funds are appropriated to the purchase of Modern Works of Art, in Painting, Drawing, and Statuary, and to the execution or purchase of Engravings, Etchings, Bronzes, Bas-Reliefs, Models, or other productions of Art, for distribution among the Subscribers by lots publicly drawn at an Annual General Meeting, which is held in July for that purpose, and for the appointment of a Committee of Management for the ensuing year. A portion of the Funds is also devoted to the production of an Engraving, or Set of Engravings, which is annually sent to each Subscriber, and to the acquisition of Modern Works of Art, towards the formation of a National Gallery.

Immediate and eminent success attended the Association at its commencement, and has continued to distinguish its career during a period of twenty years down to the present time. To its animating influence, must mainly be attributed the improved condition of Art and Artists in Scotland, for not only has a large sum been expended by the Association upon works of Art, and a fresh impetus been given through its means to private purchases, but in accordance with the regulations of the Board of Trade under the Royal Charter of Incorporation, it has already acquired, with a view to the formation of a National Gallery, three admirable pictures, at a cost of 1,200*l.*, viz., "Christ Teaching Humility," by Robert Scott Lauder; "Oberon and Titania," by J. Noel Paton; "Columbus discovering America," by George Harvey. The total amount subscribed since the commencement of the Society is 52,251*l.*, being an average for each year of 4,125*l.* 10*s.* The amount of the Subscriptions for the year ending July, 1854, was 4,159*l.*

PLAN FOR THE CURRENT YEAR 1855.

First—Each Subscriber will have a chance of obtaining a valuable Work of Art, at the Annual General Distribution in July, 1855.

Second—Each Subscriber will receive a beautifully-illustrated Edition of the Poem of

"RAM O' SHANPER."

By the NATIONAL POET, ROBERT BURNS.
Embellished by Seven Large Engravings, by LUMB STOCKS, A.R.A.E., WILLIAM MILLER, and JAMES STEPHENSON, after Original Compositions executed expressly for the Association by

JOHN FAED, R.S.A.

Third—Each Subscriber who subscribes and after 1854 continues to subscribe for five consecutive years, will receive, in addition to the Engraving, Engravings, or Illustrated Works, which will be annually issued as usual, an Impression of a magnificent Plate, upwards of 34 by 24 inches in size, now being engraved by W. H. ELLIOTT, after the first Great Picture acquired by the Association for the National Gallery—

"CHRIST TEACHING HUMILITY."

By ROBERT SCOTT LAUDER.

Subscribers who, by their Subscription of last year, have already secured a certain interest in the Engraving of "Christ Teaching Humility," will be waited upon with receipts for the current year; and those desirous of becoming Members are requested to furnish their names, without loss of time, to Mr. J. A. BELL, the Secretary, No. 69, York-place, Edinburgh; or to the following Honorary Secretaries, in whose hands an Etching of the Engraving of "Humility" may be seen:—

Charles Robertson, 51, Long-acre.

W. G. Drake, 43, Lothbury.

Alexander M. L. Logan, Standard Life Assurance Office, 82, King William-street, City.

William Cook, 61A, Moorgate-street.

F. N. Johnstone, 8, Fenchurch-street.

F. A. Curtis, Manager, Mentor Life Assurance Company, 2, Old Broad-street.

Smith, Elder & Co., Cornhill.

James Watson, 31, Berners-street.

George Rowney & Co.

C. Hitchcock, Trafalgar-square.

W. B. Maccombe, 55, Hatton-garden.

READING FAMILIES AND BOOK CLUBS.

—All the New and Popular Books, including the best Works of Fiction, may be obtained for perusal at SAUNDERS & O'LEY'S Extensive LIBRARY, Conduit-street. Supplies are sent monthly to Country Subscribers, and the number of volumes sent at one time regulated by the amount of annual subscription. Catalogues and boxes are furnished without charge.—Terms on application to SAUNDERS & O'LEY, Publishers, Conduit street, Hanover-square.

NEW AND CHOICE BOOKS.

MANY COPIES of each of the following WORKS are "AT HOME" THIS DAY at MUDIE'S SELECT LIBRARY, 510, New Oxford-street:—

Marchion's Sicily—Mountains and Meads—Gwen; or, the Cousin's Heartsease—Philip Lancaster—Antipodes—Milman's Latin Christianity—The Stop-Grace—Katharine Ashton—Lamarine's Celebrated Characters—Grace Greenwood's Tour in Europe—The Old Chelsea Boudoir—Barlett's Explorations in Texas—Jerusalem Revisited—Davy's West Indies—Russian Life in the Interior—Warren's Essays—Guislain's Count of Henry the Eighth—Mrs. Clay's Australian Life—Lord Carlisle's Diary—Curzon's Armenia—Parkyn's Abyssinian—Our Camp in Turkey—Miller's Shores of the Baltic—Oliphant's Black Sea—Matthew Paxton—Malgolade Hepburn—Hide and Seek—De Saulcy's Dead Sea—Badham's Fish Tattle—Matthew Arnold's Poems, &c.

Fresh Copies are added whenever a delay occurs, and an ample supply is provided of all the principal New Works as they appear.

Single Subscription, One Guinea per annum.

First-Class Country Subscription, Two Guineas and upwards, according to the number of Volumes required.

Prospectuses may be obtained on application

CHARLES EDWARD MUDIE, 510, New Oxford-street.

ADDRESS OF ENGRAVERS

TO

MR. S. C. HALL.

January 12, 1855.

WE, the under-signed Engravers, feel ourselves called upon at the present time, to give expression to our feelings of entire confidence in you; and to tender to you our cordial co-operation in the important Work—the Royal Gallery—on which you are now engaged.

Many of us have had the satisfaction of labouring with you, in connexion with various Works, during many years; and we all bear cordial testimony to the courtesy, kindness, and liberality we have invariably received at your hands.

It is almost unnecessary for us to remark upon the services which, for a long period, you have been the means of rendering to Art; your works have been a very eligible and important source of employment to Line Engravers, in particular, during several years past; and all our transactions with you have been conducted in the most kind and appreciative spirit, and to our mutual satisfaction.

Signed,

P.—Homœr's Ilias, 4 vols. 4to, atlas folio, of which only 170 copies were printed, Bodoni's Magnificent Edition in morocco—Delpech, Iconographie Française, et Iconographie des Contemporains, 7 vols. folio, morocco—Biblia Sacra Polyglotta, Waltoni, 6 vols. old morocco—Biographie Universelle, avec Supplément, 40 vols. folio, morocco—Mémoires de Moreri, Trévoux, Bayle, and Chausépé, all in old morocco—Histoire Littéraire de France, par des Religieux Bénédictins, 22 vols.—Cook's Voyages, 8 vols., the Original Editions, with Proof Impressions of the large Atlases, and Specimens of South Sea Cloth, old russia—D'Agincourt, Histoire de l'Art par les Monuments, 6 vols. folio—Lodge's Portraits, the original edition, 4 vols. L. P., proofs—Rousseau, Œuvres de, 22 vols. L. P., with repetitions of the plates in different states—Voltaire, Œuvres de, 66 vols. mor. with proofs before letters of the plates—Boccaccio, I Decamerone, the genuine Edition of 1572—Du Sommeray, Les Arts du Moyen Age, 10 vols. folio, morocco—Casar's Commentarii, à Clarke, 2 vols. old morocco—Bartoli, Recueil de Peintures Antiques trouvées à Rome, 3 vols., of which only 100 copies were printed—Stuart and Revett's Antiquities of Athens, with Suppléments, 5 vols. folio, morocco—Houbraken and Vertout's Heads of Illustrious Persons, 2 vols. L. P. old russia—Opere di Lorenzo de Medici, 4 vols., the splendid edition privately printed at the expense of Leopold II., Grand Duke of Tuscany, morocco—Britton's Works, 17 vols. L. P. morocco—Biblia Græca Sacre Scriptura, folio, first edition printed by Greek Veneris, A.D. 1515, morocco—Goussier's Specimens of Ornament, Art, 4 vols.—Wilkins's Concilia, 4 vols. morocco—Collection des Mémoires relatifs à l'Histoire de France, par Petitot. Buchon, Guizot, &c., 277 vols.

The Library also includes sets of the Books Privately Printed for the Bantayr and other Clubs. It is also peculiarly rich in Works on English Jurisprudence.

Mr. NISBET begs particularly to call the attention of Collectors and the Public to this Sale, which, as regards literary property, will be the most valuable and important that has ever taken place in Scotland.

The whole of the Books are the best editions, having been collected with great taste and judgment. They are in the finest possible condition, and afford choice specimens of the best binders of the day—both of this and the last century.

Catalogues of the whole are in preparation, and will be ready one month previous to the Sale, and may be had in London, of Messrs. Evans & Son, 408, Strand; in Paris, of M. Rapilly, Bookseller, Quai Malaquais; and at the place of Sale, 11, Hanover-street, Edinburgh.

THE RISE and PROGRESS of CHRISTIANITY. By R. W. MACKAY, M.A., Author of 'The Progress of the Intellect as exemplified in the Religious Development of the Greeks and Hebrews.'

"Mr. Mackay has treated his difficult and delicate subject in a manner which ought to offend no sensible person of any sect or persuasion. He writes moderately, with the spirit of a philosopher and the candour of an honest man."—*Leader*.

"A very learned work. * * Mr. Mackay traces the historical development of popular doctrines, and gives profuse references to his authorities at every step."—*Edinburgh Review*.

London: John Chapman, 5, King William-street, Strand.

Royal 4to. price 21s.

THE POETICAL WORKS of the late CATHERINE GRACE GODWIN. Edited, with a Memoir, by A. C. WIGAN. With 40 Illustrations by BIRKET FOSTER, JOHN GRIFFITH, &c.

From the *Literary Gazette*.—"There are many striking and pleasing pieces in Mrs. Godwin's collection of poetry, and we think that Mr. Wordsworth expressed a fair and candid opinion of the writer's general merit, when he said—'I have read your volume ('The Wanderer's Legacy,' &c.) through with much pleasure. Wherever it is read such poetry cannot but do you honour. It is neither wanting in feeling, nor in that much rarer gift which is the soul of poetry—imagination. There is a great command of language and fine versification.'"

London: Chapman & Hall, 193, Piccadilly.

This day is published, price 2s.

THE WHITEBOY: a STORY of IRELAND IN 1822.

By MRS. S. C. HALL.

THE LITERARY LIFE and CORRESPONDENCE

OF THE

COUNTESS of BLESSINGTON.

By R. MADDEN, Esq.

Author of 'Travels in the East,' 'Life of Savonarola,' &c.

"This long-promised and anxiously-looked for work is at length published, and we may, with perfect truth, affirm, that during the last fifty years there has been no book of such peculiar interest to the literary and political world. It has contributions from every person of literary reputation—Byron, Sir E. Bulwer (who contributes an Original Poem), James D'Israeli, Marryat, Savage Landor, Campbell, L.E.L., the Smiths, Shelley, Jenkyn, Sir W. Gell, Jekyll, &c. &c.; as well as Letters from the most eminent Statesmen and Foreigners of distinction, the Duke of Wellington, Marquis Wellesley, Marquis Douro, Lords Lyndhurst, Brougham, Durham, Abinger," &c. &c.

2.

NEW NOVEL.

In 3 vols. 31s. 6d.

MARRIED WOMEN.

By the Author of 'Broomhill.'

3.

THE WARHAWK.

By the Author of 'The Two Midshipmen.'

"Mr. Newby commences the year with an admirable novel, 'The Warhawk'—a novel that will please all readers; and the author more firmly establishes his position as the successor of the late Capt. Marryat."—*Guardian*.

In 2 vols. crown 8vo. price 11s. 6d., with 113 Illustrations on Wood, and a Copious Index,

THE CHEMISTRY of COMMON LIFE.

By JAMES F. W. JOHNSTON, M.A.

F.R.S.S. L. & E. &c.,

AUTHOR of 'LECTURES on AGRICULTURAL CHEMISTRY and GEOLOGY,' &c.

"All will concur in admiring the profound thought which has ennobled so many familiar things, and has even tinged the commonest processes of household life with the hues of novelty and surprise. The work deserves to be universally read."—*British Quarterly Review*.

WILLIAM BLACKWOOD & SONS, Edinburgh and London.

Quoted in the *Quarterly Review* of Sept., No. 190, pp. 171, 181, and 182 described as "very clever," and no over-statement.

**GIBBON'S DECLINE and FALL of
the ROMAN EMPIRE.** Edited, with Notes,
by WILLIAM SMITH, LL.D. With Portrait
and Maps, 8 vols. 8vo. 60s.

This Edition includes the Autobiography of Gibbon, and is
distinguished by careful revision of the text, and Notes incor-
porating the researches of Modern Scholars and Travellers.

"An edition incomparably the best in every respect that
has hitherto appeared."—*Examiner*.

"If there be any man capable of bringing to bear upon
the improvement of Gibbon's work the various additions
which have been made to our knowledge since his time, it
is Dr. Smith."—*Athenæum*.

III.

**JOHNSON'S LIVES of the ENG-
LISH POETS.** Edited with Corrective and Ex-
planatory Notes. By PETER CUNNINGHAM,
F.S.A. 3 vols. 8vo. 22s. 6d.

"The most popular and entertaining of Johnson's
works."—*Croker*.

"The richest, most beautiful, and, indeed, most perfect,
production of Johnson's pen."—*Boswell*.

"We are much mistaken if this Edition is not destined
hereafter to be the standard one in English literature."
Literary Gazette.

In Preparation.

WORKS of ALEXANDER POPE.

Edited by the Right Hon JOHN WILSON CROKER.

Assisted by PETER CUNNINGHAM, F.S.A.

*** This edition will be collated, for the first time, with
all the editions which appeared in the Poet's lifetime, in-
cluding those of Warburton, Warton, and Roscoe, and the
allusions throughout will be explained with greater fullness
and accuracy than has yet been attempted. The Letters
will include Pope's hitherto unpublished correspondence
with Edward Earl of Oxford, and with Broome, his assistant
in the translation of the *Odyssey*; while the *Life* will con-
tain many new facts of importance, and correct many errors
of previous biographers.

The WORKS of JONATHAN SWIFT.

HUME'S HISTORY of ENGLAND.

A New Edition, carefully revised throughout, with
Notes and Commentations, to correct his errors and
supply his deficiencies.

POETICAL WORKS of LORD BYRON.

WORKS of JOSEPH ADDISON.

WORKS of JOHN DRYDEN.

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, FEBRUARY 3, 1855.

REVIEWS

The Literary Life and Correspondence of the Countess of Blessington. By R. R. Madden, M.R.I.A. 3 vols. Newby.

THIS 'Literary Life' will be found an embarrassing book. Many of those connected with light literature and Fine Art in London during the past twenty years will feel, while they read, as if the turning of the next page must reveal some undertaking or social pleasure of yesterday in which they themselves had part,—so largely and so generously did Lady Blessington exercise hospitality and indulge in delicate and gracious acts of kindness to persons of the class in question. To such intimate and immediate reminiscences we shall not grow reconciled—let them become ever so much the fashion of the day and the rule of the biographer. In the 'Life of Lord Jeffrey,' as our readers may remember, we had calculations concerning the gains or losses of living authors—and printed letters of condolence on private bereavements, of which the shadow had scarcely passed. This Biography of Lady Blessington is calculated to excite painful feelings of a similar character. We deal sharply with those travellers who make market of the dinner-parties and "drums" of London to the Transatlantic newspapers:—but are our own hands white?—Books like the one before us tell another story. They may not be—this is not—conceived in a mischievous spirit; yet still, whatever their execution, they cannot fail to cause uneasiness. Some of Lady Blessington's correspondents, whose letters to her Dr. Madden has here printed, with disparaging comments of his own, are still alive. Others, again, are persons who cannot have anticipated public exposure of the pleasantry or pathos which they flung off unreservedly to one whose gracious welcome of everything meant to please her—and whose patience with every one whom she could befriend—encouraged confidence. There may be reasons in the present case why publication should be precipitated; but, we repeat, the book is embarrassing.

In another point, to which we must allude, a Biography of Lady Blessington is a task of singular delicacy, which had better have been deferred. In the *Athenæum* of the 9th of June, 1849, while we announced her death in a few hasty paragraphs (courteously quoted by Dr. Madden), it was said, that "into the causes which limited her gifts and graces within a narrower sphere than they might otherwise have commanded, we have no commission to enter." We wish that this feeling had been shared by others. Concerning certain matters, it were well for writers, who must think of the living, even when they would deal most gently by the dead, to be silent. But when we notice a Biography, in which these matters are at once awkwardly hinted at and transparently glossed over, silence becomes more damaging than helpful to the deceased, as well as to the living. Lady Blessington was throughout her life exposed to an exaggerated amount of harsh construction, which, however, had its root and its reason in the story of her early years. She was married when very young—was soon separated from her husband,—and the interval betwixt their separation and her second marriage was not clear of reproach. This second marriage was a rich, splendid, but peculiar one, and its sequel of circumstance afforded precisely those points of attack which are most precious to curious and thoughtless persons. The censors, falling back on what no one could deny, tri-

umphantly built up, and coloured at their will, a history of motives, adventures, follies and worse, out of the circumstances of Lady Blessington's position as a widow. But the task of separating truth from falsehood would involve a hearing of testimonies which no living jury would be patient and kindly enough to weigh. For another reason, every attempt at biographical minuteness, apology,—still more, mystification,—in such a case is a mistake. There are those living who would gladly forget the past,—there are those who have not forgiven it,—and this is as well known to Dr. Madden as to ourselves. The knowledge might have made him pause, and finally decide on giving merely a literary life and correspondence of the fascinating and kind-hearted lady, without any weary resuscitation of marriage-settlements and wills, and trials, and schedules of debts, and intimations of private sorrows and private wrongs, and partial glimpses of the "skeleton in the closet."

Having said thus much, we shall deal with this book in a fragmentary fashion. Too large an amount of extraneous matter has been introduced into its pages. There is no attempt at arrangement; and how insufficient is Dr. Madden's knowledge, and how hasty his inaccuracy, may be inferred from his speaking of one of Lady Blessington's friends, who is still alive, actively enjoying literary interest, and dispensing beneficent hospitality,—in such retrospective and conjectural language as belongs to those who have passed away. We may have to cite other errors as we proceed. Further, the press has been so carelessly corrected as to make a rectifying pencil perpetually necessary. Yet as it stands, with its faults and exuberances of every kind, the book is rich in matter which must interest for the moment, and will furnish its quota of anecdote to the literary records of the first half of this century.

Dr. Madden's notices of Lord Blessington, and of the lying-in-state of his first Lady in Dublin—"under a velvet pall of the finest texture, embroidered in gold and silver, which had been purchased in France for the occasion, and had recently been used at a public funeral in Paris of great pomp and splendour, that of Marshal Duroc"—remind us that this fantastic and extravagant nobleman is said to have been the original of *Lord Rosbrin*, in Lady Morgan's 'Florence Macarthy.' His private theatricals, too, at Rash, in Tyrone, merited honourable mention in Moore's *Review* article on the subject.—

"About 1807, he expended a great deal of money in enlarging the offices, building an extensive kitchen and wine cellars, and erecting a spacious and elegantly decorated theatre, and providing 'properties,' and a suitable wardrobe of magnificent theatrical dresses for it. The professional actors and actresses were brought down by his Lordship, for the private theatricals at Mountjoy Forest, from Dublin, and some even from London. But there were amateur performers also, and two of the old tenants remember seeing his Lordship act 'some great parts,' but what they were, or whether of a tragic or a comic nature, they cannot say, they only know 'he was thought a fine actor, and the dresses he wore were very grand and fine.' The ladies who acted were always actresses from the Dublin theatres, and during the performances at Rash, his Lordship had them lodged at the house of the school-mistress, in the demesne near the avenue leading to the house. The 'Quality' who came down and remained at Rash during the performances, which generally lasted for three or four weeks each year, were entertained with great hospitality by his Lordship. The expenditure was profuse in the extreme for their entertainment, and the fitting up and furnishing of places of temporary accommodation for them during their brief sojourn. The dwelling-house of Rash was

more a large cottage, with some remains of an older structure, than a nobleman's mansion."

There was an Irish close to the absurd and disproportionate pageant,—type, it might be added, of much that subsequently befell the pomps and glories of Lord Blessington's wealth.

"The house became in a short time so dilapidated, as to be unfit to live in. His Lordship gave directions to have extensive repairs and additions made to a thatched house of middle size, about a quarter of a mile distant from Rash. The furniture was removed to this place, which Lord Blessington called 'the Cottage,' and the old home at Rash was left to go to ruin. When I visited the place recently, nothing remained but some vestiges of the kitchen and the cellars. The theatre had utterly disappeared, and nothing could be more desolate than the site of it. The grounds and garden had been broken up, the trees had been all cut down in the vicinity. Here and there, trunks and branches, yet unremoved, were lying on the ground. The stumps of the felled trees, in the midst of the *débris* of scattered timber, gave an unpleasant and uncouth aspect to a scene, that had some melancholy interest in it for one who had known the noble owner of this vast property."

In Dr. Madden's account of Lord and Lady Blessington's Italian journey—during which he made their acquaintance—the meeting with Byron, which served to introduce the Lady prominently into authorship, makes a handsome figure,—thanks, chiefly, to quotations of the best passages in the Lady Blessington's book. In the second volume, however, where a considerable space is devoted to *La Contessa Guiccioli* (now *Marquise de Boissy*) the amount of the Irish Lady's opportunities for observation is curiously diminished by the following statement.—

"Lady Blessington's intimacy with Byron was only for a period of two months, and during those two months, I am informed by the Countess Guiccioli (now *Marquise de Boissy*) that the interviews between Lady Blessington and Byron did not exceed five or six; and that the feelings of friendship entertained by his Lordship were not of that very ardent nature which would have prevented him from indulging in his favourite propensity of bewildering his *entourage*, by giving expression to satirical observations even on a friend on whom he had written such eulogistic verses as he had composed for the Countess of Blessington." * * * Lady Blessington courted the society of Madame Guiccioli, it is true, showed her great civility, and made a great deal of her in the *salons*; but any little peculiarities of the Italian lady were seized hold of eagerly, and made the most of in society, and laughed at in it. Like most Italian women, Madame Guiccioli has very little comprehension of badinage or irony in conversation. The Guiccioli could not understand anything like a joke; she could bear with any neglect, or even a slight, provided it extended not to Byron's memory. Lady Blessington, who delighted in certain kinds of mystification in a sportive humour, mischief malikien of a playful sort, used sometimes to take advantage of Madame Guiccioli's simplicity and amusing peculiarities, her exaggerated ideas of Italian superiority in all matters of refinement, her invincible persuasion that Italians exceeded all other Europeans in genius, virtue, and patriotism, to enter into arguments at variance with her notions, and to propound strong opinions unfavourable to the people, culture, and climate of Italy."

The following story, too, is amusing, though we should have been glad to see the name of "one who has a good knowledge."

"It must also be observed, that the interview with her Ladyship is described as having been sought by Lord Byron. It is more than probable, however, a little *ruse* was practised on his Lordship to obtain it. It is stated by one who has a good knowledge of all the circumstances of this visit, that a rainy forenoon was selected for the drive to Byron's villa. That shelter was necessitated, and that necessity furnished a plea for a visit which would not have been without some awkwardness under other circumstances. Lord

Blessington having been admitted at once, on presenting himself at Byron's door, was on the point of taking his departure, apologizing for the briefness of the visit, on account of Lady Blessington being left in an open carriage in the courtyard, the rain then falling, when Byron immediately insisted on descending with Lord Blessington, and conducting her Ladyship into his house."

This anecdote is, of its order, a *pendant* to the well-known enterprise of the French Lady who, despairing of otherwise obtaining access to Mr. *Mississippi* Law, when that financier was in the flood-tide of his popularity, directed her coachman to overturn her carriage in the Rue Quincampoix, "over against" his residence.

The reminiscences of these Genoa days and Byron, of course, include the English poet's well-remembered mention of Count d'Orsay and his commendations of that MS. Diary kept by the young "*De Grammont redivivus*," which, from the day when Moore's '*Life*' was published, so sharpened public curiosity and expectation. In that journal a lively picture of the dandy days of English high-life was said to exist, as bright and pointed as those chronicles of *la Blanche* Wetenhall and *la Belle* Muskerri—which, in some sense, have made the Beauties of Charles the Second classical heroines. Brilliant and shrewd any journal kept by Count d'Orsay must have been; though, possibly, in his compliments, Byron may have somewhat exaggerated his admiration, according to his usage; but the author of the '*Literary Life*' before us gives a death-blow to curiosity, by stating that Count d'Orsay's Diary exists no more, having been burnt by its writer some years since. If this be the case, it should have been added, that the MS. was destroyed in no fit of spleen (for never was diarist, to the last, less splenetic than Count d'Orsay); but out of gentlemanly regard for the society in which, long after the journal of a passing stranger was written, its writer made himself at home. Yet more, it cannot have been burnt without cogent temptations offered to its writer to adopt the contrary course. We believe that during the later part of Count d'Orsay's residence in England, when his embarrassments were notorious, he might again and again have coined money on the pages of a manuscript reputed (on no less an authority than Byron's) to be so piquant. We have heard him again and again declare that he never would "sell the people at whose houses he had dined!" and think it possible that the Diary may have been destroyed by himself, in order to render all temptation impossible.—

What's done we partly can compute,
But know not what's resisted.

Among other residents in Italy who gathered around Lady Blessington, Dr. Madden (whose own acquaintance with her began during that period) makes honourable mention of the quaint, learned humourist, Mr. Mathias, author of '*The Pursuits of Literature*' and a translation into Italian of Beattie's '*Minstrel*,'—Dr. Millingen, the antiquary,—and the venerable and gracious Archbishop of Tarentum, whose courtesies and whose cats make a figure in the pages of almost every tourist who has written of society in Italy since the century began. Who has forgotten the chaplain's solemn answer at an Arch-Episcopal dinner-party, when, on the host inquiring whether his tortoise-shell favourites were served to their liking, the attendant replied, "*Desdemona* will wait for the roasts"?—But the liveliest of the circle was Sir William Gell, whose letters figure brightly in the second volume. The history of "*The English in Italy*" (and a curious book of *virtù* and anecdote might be written with such a title) will not be complete without liberal extracts

from this correspondence, with its references to Sir William Drummond at Monte Cassino,—to Mrs. Dodwell's dazzling beauty,—to the Hon. Keppel Craven's hospitalities in "the tremendous large old convent," which Sir William maintained he inhabited half out of perversity,—to the delicious *malaprop* of that Irish lady, who talked (among other wonders) of the "*liquidation*" of the blood of St. Januarius. But the above are somewhat local and dowager topics:—of more general interest is the following, from a letter addressed to Lady Blessington in the year 1833:—

"At this moment, I received a little work of a few pages from the Archbishop upon Cats, on the occasion of a cat's mummy brought for him from Egypt by a friend of mine, Dr. Hogg, who is just come from that country. The good old soul is really very little altered since you saw him, though he is now ninety-one; but I cannot imagine how the machine is to go on much longer. He desires one thousand loves to you, and I am to take the Bulwer to dine with him shortly, though I fear if he is not quick at Italian, he will scarcely become very intimate, as I observed Walter Scott and Monsignore did not make it out very well together, for the Archbishop will not take the trouble to talk much or long together in French. By-the-by, I observed to you that my life of Walter Scott in Italy, which I wrote by the desire of Miss Scott, was very entertaining in its way, and I sent it to Mr. L. by Mr. Hamilton. He has never, however, thanked me for it, nor even acknowledged the receipt of it, nor sent me Sir Walter's works, which he ordered for me with almost the last sentence he uttered that was intelligible, and if it does not appear in the work, it will be really worth publishing, and I shall send it to you."

These letters contain more concerning the Gell MS. furnished to the Author of '*The Life of Scott*,' with the reception of which, by that gentleman, Sir William seems to have been anything rather than content, *vide* the following passage from a letter written in 1834:—

"As to Mr. L——, I fear much that he is not good for much, and I am certain he got the work, for I sent it to Mr. William Hamilton, who gave it with a request that he would not omit a word of it in printing. I kept a copy of it, however, and I will send it to you. There are no remarks, except such as tend to explain away and render less ridiculous the total want of classical taste and knowledge of the hero, in a situation full of classical recollections, and which I have added, that I might not seem insensible to his real merits. They were written for the family, and by the desire of Miss Scott herself, and therefore nothing offensive could have been inserted; and when I had finished the anecdotes, I was surprised myself at the number of circumstances I had recollected, and perceived that the account of the last days of so distinguished a person was really interesting, when told with strict regard to truth. The circumstances of his illness having changed his mind, or deprived it of its consistency, which I myself much doubt, might be judged of from his way of treating the subjects of conversation which presented themselves, and this alone would be of consequence to his numerous friends. I think it scarcely possible that any of those most attached to him could be displeased at my manner of representing him, and at all events, I have repeated what he said, and related what he did in Italy, in a way that satisfied every one here, who was the witness of his sayings and doings. However, I shall send the copy to you, and if the *Life* is published by the said L——, without use and acknowledgment of my papers, the best way will be to sell it to the bookseller, and to let it come before the public. I will affix, or rather prefix, Miss S——'s request, that I would write it, and will suppose that the original has been lost or mislaid, in consequence of her premature decease. In this case, I shall beg of you to make the most advantageous bargain you can, for a poor author under your protection."

Under the idea broached in the last passage, of publishing his Reminiscences of Sir Walter in Italy in a separate form, Sir William, in a later letter still, begged Lady Blessington to

introduce the following anecdote, which is in every way characteristic:—

"On our return to the Palazzo Caramanico, we passed Mr. Laing Mason in the street, and this brought to Sir Walter's mind the refutation of the antiquity of Macpherson's *Ossian* by Mr. Laing, who had shown that the names of the heroes were taken from the map, I think, of the channel between the Isle of Skye and the main land. 'One of these names,' said he, 'happens to have been given in the last century, and the date of that is well known.' Mr. Laing knew those countries well, and his proof was striking and satisfactory. I think he said Mr. Laing came originally from Orkney, and he added, 'I once went to see him, and carried over in my boat a faggot of sticks for the peas in his garden, which were reckoned there a great curiosity.' He said, however, that elders would grow, and that the face of the country might be improved by them. From this he was led to compare the once flourishing state of those islands with their present forlorn appearance, and observed, that 'to a people from the furthest North, these might perhaps have seemed the abodes of the blessed.' They were certainly, said he, esteemed holy, and there was a great circular building like Stonehenge, not far from Kirkwall, which proved the importance of the place. Saying this, he searched for, and presented to me, a pencil drawing of the temple, which I preserve, and highly value. It is entitled, 'Standing Stones of Stenhouse in Orkney,' and has on the back inscribed the name of J. Keene, Esq., by whom it was probably drawn. Sir Walter mentioned another pillar, called the stone of Odin, which is perforated, and afterwards desecrated on the ordeal, by which persons accused of crime were deemed innocent, if capable of passing through this species of aperture, in very remote ages."

We already knew how strong the love of home was in the Scottish poet; and can easily conceive how one so imbued with Southern *diletantism* (the inevitable condition apparently of a protracted residence in Italy) as Sir William Gell, may have been a sarcastic, rather than a sympathetic, observer of a guest so pre-occupied and so little flexible. But on all occasions there seems to have been an extra drop or two of vitriol in Gell's ink; as, for instance, in the following passages, where he alludes to the possibility of his writing his own memoirs.—

"By living partly in London and partly abroad, I have certainly met with, and have known, a great variety of personages, not to mention Dr. Parr and the Queen, of whose life and manners I could certainly make very good fun and much amusement; but I must treat them in a very different manner to that which I measured my account of Sir Walter, for the inspection of his family. I have a neighbour who often desires me, and urges me, to write my life; but I really do not see the possibility of making it true and entertaining, without committing half my acquaintance. I have some sixty or seventy letters of Her Most Gracious Majesty Queen Caroline; and '*Mein Gott!*' what curious things they are, and how rightly it would serve the royal family supposing they had not quarrelled with her, to publish their wife and cousin's correspondence, as they have cheated me out of my pension."

The following anecdote is short and sharp enough.—

"Dear Gell, I send you my friend Mr. —; you will find him the greatest bore, and the most disputatious brute you ever knew. Pray ask him to dinner, and get any one you know of the same character to meet him."—This was brought me by the man himself, and I found him in every way answering to the character."

It should be recollected, in conclusion, that Gell was tempted to the indulgence of the humour which speaks out in the above,—not merely by the training which he must have acquired in the years when he served a royal mistress whom he despised,—but also from the influence of long-protracted bodily suffering. His later years were passed in martyrdom from gout and rheumatism.

There are some plausible letters from Count Matuschewitz, written in wonderfully good English; others from Prince Schwartzberg, who made use of the *nom-de-guerre* of Capt. Wolf, after the safe fashion of old-fashioned Austrian diplomacy. To these follow some letters and a notice of that finished gentleman, the late Duke of Ossuna, prefaced with the somewhat astounding remark, that "the present Duke has inherited all that was his brother's except his intelligence:"—which, we submit, is tolerably personal as applied to a gentleman at present circulating in London society.—Dr. Madden does scanty justice to the dead as well as to the living. The polished breeding which distinguished the late Duke of Ossuna was remarkable enough to merit especial commemoration. How completely, but how courteously, he contrasted with the members of the circle into which he was thrown in England; and how he "held his own" with a quiet ease, independent of commanding intellectual superiority, will not be forgotten by any one accustomed to study what is called "manner" who saw him in society. It was he who, when pressed by an English nobleman with some inquiry more close than considerate as to the exact amount of his vast fortune, replied, with a polite smile, "My Lord, I do not understand your English money."

M. Eugène Sue, characterized as "a strange compound of credulity and imposition,"—M. le Vicomte d'Arlincourt, whose letters are indorsed by Dr. Madden as about "the most remarkable specimen's of 'intense literary vanity' and 'consummate self-conceit' (!) which any language affords,"—MM. Casimir Delavigne and Alfred de Vigny (the last mere passing acquaintances) fill sundry pages. After these comes an elaborate and not very living picture of *La Contessa Guiccioli*, whose self and present husband are spoken of with as curious and critical a coolness as if both were defunct or a pair of waxen celebrities in the Tussaud gallery. In this "article," however, we find a pair of stanzas by Byron, which "we tell as they are told to us."—

"Four years previously to July, 1819, Byron had met with some loss, which he made the subject of lines of much beauty and pathos, that are not to be found in his collected published works. These lines throw some light on the apparent indifference which Byron was in the habit of exhibiting, on occasions of separation by death, or other causes, from those he loved; and especially on the occasion of his parting with Madame Guiccioli, at the period of his embarkation for Greece."

Stanzas, by Lord Byron.

I heard thy fate without a tear,
Thy loss with scarce a sigh;
And yet thou wert surpassing dear—
Too loved of all to die.
I know not what hath seared mine eye;
The tears refuse to start;
But every drop its lids deny,
Falls dreary on my heart.

Yes—deep and heavy, one by one,
They sink and turn to care;
As caverned waters wear the stone,
Yet dropping harden there—
They cannot petrify more fast,
Than feelings sunk remain,
Which coldly fixed, regard the past,
But never melt again.

—The above lines were obtained from the late Mr. R. A. Davenport, compiler of a Dictionary of Biography, and author of several works, who had the kindness to communicate them to my publisher, with a note, wherein he said:—"These lines are in Lord Byron's own handwriting. I received them from him, along with another poem, in 1815. I add the seal and post-mark, in confirmation of my statement."

R. A. DAVENPORT."

Not without protest do we read another "Memoir of L. E. L.," which is mainly devoted to a fresh raking-up (as it were) of the dust among which she lies, without any clear light being thrown upon the circumstances of

her sudden death. Will there never be an end of these cruel surmises—these unproved accusations? The letters from Miss Landon to Lady Blessington are merely heart-warm acknowledgments of service rendered her on the occasion of an election to the Secretaryship of the Literary Fund. Some book in which Lady Blessington was concerned had been critically disparaged by Miss Landon,—but this was forgotten by the former when a case occurred in which she could help a literary contemporary. Remembrance of the matter, however, may have added earnestness to her expressions of affectionate thankfulness:—for she was visited by compunctions as impulsive as the praise or blame commanded from her pen had been mechanical. During this very Literary Fund canvas, when a stranger called on her with some slight information of service to the cause she had at heart, Miss Landon burst into sudden tears, exclaiming—"O, you don't know the unkind things I have said about you in print!" Her notes here published are painful in the excess of their gratitude. Lady Blessington, Dr. Madden adds, gave him the commission, on his departing for Cape Coast, to erect a monument there to poor Mrs. Maclean at her expense. In this, however, he was anticipated.—Among these "Memorials," too, is a musical "lament" in verse on her death, given as copied in the handwriting of Mr. Landon, which we rather believe may be the composition of Miss Theodosia Garrow.—Dr. Madden might further have given as an illustration of the humour of one whose name fills a large space in these pages, the manner in which the one authoress was pointed out to the other, at a very early stage of their correspondence, before they had met personally. The place was the Opera, at which Miss Landon appeared one evening, wearing a dark velvet Scotch cap and feather. "Look!" cried Count Orsay, in a gay, eager voice, raising his *lorgnette*, "Look! that is Miss Landon, with her inkstand on her head, and her pen in it!"

Every page, almost, reminds us of the uses for which Lady Blessington's constant kindness and large London acquaintance were claimed by her correspondents. Poor Miss Emma Roberts, writing from Parell (India), in 1839, bespoke her interest to obtain commissions from the nobility and gentry desirous of possessing Indian rarities.

"I often wish to procure a commission from the Duke of Devonshire, or other wealthy patron, for the collection of horticultural or zoological specimens, which would have assisted to defray the enormous expenses of travelling. Were I to remain at Bombay I could limit my expenditure within very reasonable bounds, but in this case I should acquire a very small quantity of information; I have therefore determined upon making a journey into the provinces, and should you have an opportunity of recommending me as a useful agent to some liberal person at home, I feel assured you would do your utmost to forward my plans. Amid many other objects of interest for a nobleman's park, the yak or yew of Thibet is the most desirable; it will not live in India on the plains, but might in the cold season be carried up the Red Sea; and I should be most happy to go myself into the Himalaya to procure specimens. The kind interest which you have shown in my welfare has encouraged me to trouble you with these details. I feel that I have some claim upon patronage, since my patriotic feelings have induced me to prefer travelling in the British dependencies for the purpose of making them better known, instead of going to America, notwithstanding the offers made to me by publishers at home, who would have made very liberal advances for the expenses of my journey."

The most interesting pages in the second volume are the letters addressed to Lady Blessington by Mr. W. S. Landon. Her letters to the poet; too, are her best,—as though the high nature and great endowments of her correspondent

imperceptibly nerved her when she sat down to talk to him on paper. But Lady Blessington's writings, we must again repeat, whether imaginative or epistolary, in no respect did her justice.

We shall speak of this correspondence next week.

A History of England during the reign of George the Third. By William Massey, M.P. Vol. I., 1745—1770. Parker & Son.

Mr. Massey's 'History' runs over a period of five-and-twenty years,—and so far fails to keep the promise of its preface. The preface bids us expect—not so much a political, a court, and a military history of England—as a history of manners, of men and of institutions in our country. In a word, we are told to expect a Social History "from various sources of information which have hitherto been little consulted by the professed historian." As yet, however, Mr. Massey gives no indication of fulfilling this design.

Indeed, we scarcely see the object or the apology of this new "history." Mr. Massey has no new material. He does not profess to entertain original views. He writes of accepted facts in the accepted style; assumes as true what he does find uncriticized; and pronounces unsuspecting rather than dogmatic judgments on the man or the event in hand. Why his book should supersede Adolphus or Belsham—we will not say Lord Mahon—is not very clear. Its only merit lies in a certain literary tact, a power of pleasant narration and of personal portraiture, possessed by its author. The volume is not critical, but it is readable. Mr. Massey never troubles himself with doubts; the nearest explanation of a difficulty serves his turn; he takes a side on every question that arises, and assumes that when he has taken a side, he has settled the whole matter. History is made very easy by such a process.

It is easy to write—and easy to read. The author who pauses at every step—surveys his ground cautiously—looking with his own eyes at every object—makes slow progress; over such an author's books the reader is apt to yawn and shut up the volume in fear of a headache. Mr. Massey's narrative, on the contrary, slips through the senses without awakening one suspicion, and at the end of a dozen volumes the reader may find himself amused and fancy himself instructed.

A book which is not critical does not challenge criticism. From a mere picture-book, it is enough to select a few pictures; and we shall do this in Mr. Massey's case, in order to present him on the sunny side of his attainments.

Here is Pitt, as drawn by Mr. Massey.—

"Pitt's character had many faults, and one above all, which is hardly consistent with true greatness. A vile affectation pervaded his whole conduct, and marred his real virtues. Contempt of self was one of the traits which distinguished him in a corrupt and venal age. But not content with foregoing official perquisites which would have made his fortune, and appropriating only the salary which was his due, he must go down to the House of Commons and vaunt in tragic style how 'those hands were clean.' On resigning office after his first great administration, he could not retire with his fame, but must convert a situation full of dignity and interest into a vulgar scene by the ostentatious sale of his state equipages. Sometimes, to produce an effect, he would seclude himself from public business, giving rare audience to a colleague, or some dignified emissary of the Court. Then, after due attendance, the doors were thrown open, and the visitor was ushered into a chamber, carefully prepared, where the Great Commoner himself sat with the robe of sickness artfully disposed around him. Occasionally, after a

long absence, he would go down to the House in an imposing panoply of gout, make a great speech, and withdraw. At a later period, he affected almost regal state. His colleagues in office, including members of the great nobility, were expected to wait upon him; at one time he did not even deign to grant them audience, and went so far as to talk of communicating his policy to the House of Commons through a special agent of his own unconnected with the responsible Government. The under-secretaries of his department, men of considerable official position, and sometimes proximate ministers, were expected to remain standing in his presence. When he went abroad he was attended by a great retinue; when he stopped at an inn he required all the servants of the establishment to wear his livery. Yet all this pride tumbled into the dust before royalty. His reverence for the sovereign was Oriental rather than English. After every allowance for the exaggeration of his style, it is still unpleasant to witness the self-abasement of such a spirit before George the Second and his successor. 'The weight of irremovable royal displeasure,' said he, 'is a load too great to move under; it must crush any man; it has sunk and broke me. I succumb, and wish for nothing but a decent and innocent retreat.' At the time when Pitt indited these shameful words, he was the most considerable man in England, and on the eve of an administration that carried the power and glory of England to a height which it had never approached since the days of the Protector. If it were just to resolve the character of such a man into detail, it would be easy to collect passages from the life of Chatham which should prove him a time-server, a trimmer, an apostate, a bully, a servile flatterer, an insolent contemner of royalty. All these elements are to be found in the composition, as poisons are to be detected in the finest bodies. But taken as a whole, a candid judgment must pronounce the character of Chatham to be one of striking grandeur, exhibiting many of the noblest qualities of the patriot, the statesman, and the orator."

A companion portrait, not painted on so large a canvas because there is so much less to paint, is the following, of the Duke of Newcastle.—

"Newcastle was far, indeed, from being a competent minister, but duller men have filled his office both before and since, and obtained a respectable place in history. He was the successor of Walpole in the management of that machinery of corruption by which the government was carried on. Himself a large borough proprietor, he had a principal share in all the traffic for seats in the House of Commons. Reserving to his own management exclusively the distribution of places, and the dispensation of the Secret Service fund, he administered this department with considerable skill and tact. His maxim was, to avoid giving offence to, or breaking with, any man, however inconsiderable. Those whom he was unable or unwilling to gratify, he held on by promises or caresses. He evinced a shrewd perception of the characters with which he had to deal. At the time when he was doing everything in his power to supplant Pitt, he affected to carry on a confidential correspondence with him, to whisper state secrets in his ear, to pay the utmost deference to his judgment, and, above all, to ply the king's name—a spell which never failed in its influence upon the Great Commoner. Newcastle is a remarkable instance of the success which usually attends the unwearied pursuit of one object. Without parts or knowledge, or one single quality of a statesman; notoriously false, fickle, and timid; grotesque in deportment, and absurd in speech, this man contrived to outwit his competitors, and to maintain his position at the head of affairs during a long official life."

Here is somewhat of light and shade. Indeed a noticeable point of this 'History' is the moderation of its tone and the impartiality of its censures. Mr. Massey has some good remarks on the vexed question of—What is a political Adventurer? He is speaking of the first Lord Holland.—

"He has, indeed, been described as a political adventurer; and this is the epithet usually employed when it is intended to cast the most offensive contumely upon a public man. To my mind, however,

the phrase conveys nothing of disparagement. I do not understand why it should be disreputable to take to public business as a profession, any more than to law, or medicine, or science, or art, or even letters. A tradesman's son who becomes Lord Chancellor is not necessarily assumed to have risen by unworthy means. Why should the same person be vilified if, by giving his talents and industry another direction, he should have attained the position of a Secretary of State? Can it be suggested that political science is a less arduous study than law or physic; or that no one can undertake it with credit who has not a certain position in society? If this term, 'political adventurer,' is intended to apply to every man who enters upon public life without private fortune, or any occupation which may enable him to maintain an independent position, it includes many of the greatest statesmen the country has produced since the Revolution. I may instance such names as Craggs, Walpole, Chatham and his son, Burke, Canning, Horner, and Huskisson. These men, and many others who might be named, were in this sense political adventurers. The class of politicians to whom the phrase, in its opprobrious sense, is more appropriate, comprises those persons who, without any vocation for public business beyond the accident of birth or family connexion, betake themselves to political pursuits, often for no other purpose than that of being provided for by employment in the public service. The public offices have always been occupied chiefly by such persons; and nothing but the jealousy of Parliament, and the increased vigilance of public opinion have checked their intrusion into the higher departments of the state in preference to unpatronized merit. In fact, any man who enters upon political life with the same object that he would enter upon a regular profession, is an adventurer; but of this class, as many start from a position as from previous obscurity. History affords no ground for an invidious distinction in the quality and character of the public men who have come from different classes of society."

The question is further illustrated by the cases of Pitt and Fox—both of whom, as well as Burke and Sheridan—were denounced in their day by the opprobrious term.—

"Fox had already dissipated his small patrimony; and the private fortune of Pitt was 100*l.* a year. Each of these men successively filled an office, the irregular emoluments of which, in time of war, were sufficient in a few years to create a considerable fortune. The paymaster was entitled by usage of office to receive, in addition to his salary, a percentage upon all subsidies granted to foreign powers, and to retain in his hands, at a time when the rate of interest was five per cent., a balance of public money amounting to at least 100,000*l.* The average perquisites of this office during the periods when it was held by Pitt and Fox can hardly have been less than 20,000*l.* a year. The salary was 2,000*l.* Pitt, on his accession to this office, declined to receive any more than the salary; he directed the balance of public moneys to be transferred from the private credit of the Paymaster to the Exchequer; and the percentages on the subsidies he altogether renounced. Yet when he quitted office, his necessities obliged him to accept an allowance of 1,000*l.* a year from his brother-in-law, Lord Temple. The perquisites of office during a single twelvemonth would have sufficed to realise the capital value of this annuity. But Pitt, with notions of honour and delicacy too pure and refined for the comprehension of ordinary men, scorned to touch public money to which he felt that he had no legitimate claim, and preferred, for the relief of his necessities, to endure the weight of private obligation. Fox pursued a different conduct. The enormous gains of the Pay-office were to him, throughout his public career, a paramount consideration; the example of Pitt, whom he succeeded in this office, had not the slightest effect upon his coarse and venal nature, the self-denial of a noble integrity would appear to him as a freak of romance or ostentation; and the low morality of the times would rather admire the worldly wisdom of Fox, than appreciate the magnanimity of his predecessor in office. Fox realised a large fortune from the profits of the Paymaster; and it is certain that he took to public life as a means of repairing his shattered fortunes.

He was, therefore, in the strictest sense, a political adventurer, because it was impossible for him, consistently with his object, to maintain that independence which is essential to a useful and respectable position. But that this position can be maintained by men who enter upon public life without any advantages of private fortune is a fact of ordinary experience."

Such extracts give a fair sample of that pleasant literary faculty of which we have spoken. If we were asked to describe Mr. Massey's book in a word, we should call it—The Idler's History of England.

THE WAR.

THE poets and the poetasters have possession of the field. First among those who seek to give a public voice to the feelings of the multitude on the glories, the vicissitudes, the mismanagement of the war, is Mr. Gerald Massey. Since we had the pleasure, now a year ago, to introduce this young and interesting singer to the notice of our readers, he has blossomed into finer flower; and his present offerings, *War Waits* (Bogue), though written on fugitive themes, and described by himself as "rough and ready rhymes," exhibit a poetic growth as remarkable as any we remember in so short a time. On this, however, we do not mean to dwell; another opportunity will doubtless come for analysis and criticism:—at present, we content ourselves with a practical exhibition of our workman-poet's mode of dealing with the war, and of painting its scenery and its emotions in poetic colours.

We begin with a picture of England at the approach of war.—

There she sits in her Island-home,
Peerless among her Peers!
And Liberty oft to her arms doth come,
To ease its poor heart of tears.
Old England still throbs with the muffled fire
Of a Past she can never forget;
And again shall she banner the world up higher;
For there's life in the Old Land yet.

They would mock at her now, who of old lookt forth
In their fear, as they heard her afar;
But loud will your wail be, O Kings of the Earth!
When the Old Land goes down to the war.
The Avalanche trembles half-launch and half-riven,
Her voice will in motion set;
O ring out the tidings, ye Winds of heaven!
There's life in the Old Land yet.

The 'March,' and 'Down in Australia,' are full of spirit—are, in fact, ballads of the war, earnest, throbbing, musical. Still finer is 'Liberty's Bridal Wreath,' a good lyric with a bad name. We quote a single stanza, and take the liberty, as before, to mark a couplet in italics.—

Like a stern old friend, War grimly comes
To the temple of peaceful life;
With the well-known nod of his beckoning plumes,
He hurries us into the strife!
And we meet once more, in the fields of fate,
With our Chivalrous Enemy,
Who knows, by the grip of our hands in hale,
What the strength of our love may be.
O! the Lilies of France and Old England's Red Rose
Are twined in a Coronel now;
And at War's bloody bridal it glitters and glows
On Liberty's beautiful brow.

The charge, the contest, the retreat, are vividly drawn by the writer; who has never seen a squadron in the field. Here, however, is another picture painted from the life—a war winter night in England.—

Wild is the wintry weather!
Dark is the night and cold!
All closely we crowd together,
Within the family fold.
A mute and mighty Shadow flies
Across the land on wings of gloom;
And thro' each home its awful eyes
May lighten with their stroke of doom.
Life's light burns dim—we hold the breath—
And stern we sit in the shadow of Death,
Around the household fire—
Straining our ears for the tidings of War,
And holding our hearts, like Beacons, up higher,
For those who are fighting afar.

* * * * *
Old England still hath Heroes
To wear her sword and shield!

We knew them not while near us,
We know them in the field!
Look! how the Tyrant's hills they climb,
To hurl our gaze in his grim hold!
The Titans of the earlier time,
Tho' larger-limb'd, were smaller-soul'd!
Laurel, or Amaranth, light their brow!
Living or dead, we crown them now!
As we sit by the household fire,
From the white cliffs watching the storm of War,
Holding our hearts, like Beacons, up higher,
For those who are fighting afar.

* * *
Ah, me! how many a maiden
Will wake o' nights, to find
Her tree of life, love-laden,
Swept bare in this wild wind.
The Bird of bliss to many a nest
Will come back never, never no!
And many a goodly, gallant crest
That led to victory, now lies low!
We pray for them, we fear for them,
And silently drop a tear for them,
As we sit by the household fire;
Each life looking out for its own love-star!
Holding our hearts, like Beacons, up higher,
For those who are fighting afar.

Prose has been so busy with the manifest difference of spirit in which the nation and the late government sent their bravest into the field, that the reader may like to see how the poet of the working classes expresses their opinions on this difference. If so, here are the two pictures drawn with a firm hand, and coloured with the brush of a master.—

With faces turn'd from Battle they went forth:
We march'd, with ours set stern against the North.
They shuffled lest their feet might rouse the dead:
We went with martial triumph in our tread.
They trembled lest the world might come to blows:
We quiver'd for the tug and mortal close.
They only meant a mild hint for the Czar:
We would have bled him through a sumptuous war.
While they were quenching Freedom's scatter'd fires,
We kindled memories of heroic Sires.
They'd have this grand old England cringe and pray,
"Do not smite me, Kings; but if you will, you may."
We'd make her as in those proud times of old,
When Cromwell spoke, and Blake's war-thunders roll'd.
They to the passing powers of darkness fawn:
With warrior joy we greet this crimson Dawn.

After verse so vigorous that it seems to echo the tramp of horses and the roar of cannon, most of our minor minstrels would be tame. We shall therefore not be prodigal of extract. Mr. Seaman has published, *Inkermann: a Poem* (Houlston & Stoneman),—H. R. F. *Christmas Dawn*, 1854, and *New Year's Eve*, 1855 (Macmillan),—Melanther, *The Bugle of the Black Sea* (Hardwicke),—A retired Liverpool Merchant, *The Battle of Inkermann* (Hall & Co.),—Mr. J. W. Fletcher, *The Battle of the Alma: a National Ballad* (Theobald),—and Mr. R. W. Elliot *The Battle of Inkermann* (Hull, Leng),—all with very good intentions, but with powers inadequate to the theme in hand. Verses like the following have not rhythm enough for decent prose.—

War rolled its mandates from the fire-tongued batteries,
Its vassals fiercely trod the rocky plain;
The strong blast trembled at its bloody sceptre,
Peace fled with tearful eyes from Murder's stain.

Among other works on the war now lying at our elbow, are a few of which it will suffice for us to announce the appearance, with the briefest comment on their merits. *The Night after the Battle of Inkermann* (Hatchard) is a prose rhapsody on the "delayed despatches,"—*An Inquiry into the Policy of Restriction on Commerce in time of War*, by Mr. Bottomley, of Belfast (Green), is an able and acute investigation by a practical man.—*Some Observations on the War in the Crimea* (Simpkin & Marshall) are written to prove the folly of sending out small detachments of men to die of cold and hunger in the Crimea. The writer would send out an army of fifty thousand men fully equipped;—but he does not tell us where he would find them.

A Knouting for the Czar, by a Soldier (Wright), is an account of the three battles of the Crimea, taken from a very patriotic point of view.—*Prince Mentchikoff's Carpet-Bag*, by "Our Own Correspondent" (Thomas), is a

squib, and rather a clever one in some respects. But we doubt whether the solemn interests of the hour will allow of this light reading on the war.

Opinions respecting Peace, by Viscount Ponsonby (Brighton, Folthorp), are of some importance, not only as coming from such a quarter, but also for their bold and sweeping character. The great complaint of the public is, that the aristocracy is not in earnest,—that it fears to make reprisals on the Czar,—and is, therefore, incompetent to conduct the war. Here, however, is a nobleman as "liberal" in his demands on Russia, and as resolute in his determination to exact them, as the sturdiest philosopher in his closet and the warmest patriot in his club. Says Lord Ponsonby:—

"On the first of October last, I expressed publicly the opinion, that the true policy of the Allies is to wrest from Russia every territory that Russia has wrested from Turkey, in the course of the last seventy years, and to restore to the Sultan all those territories, and to reject every project for a peace which should not have that end for its object. I assert that any peace by which Russia is left in possession of any of those Asiatic territories is, in fact, a victory for that Potentate, and will be so considered by the nations and tribes I have alluded to. Persia will continue to be subservient. The Mongol Tartars, Cossacks, &c. &c., will obey orders from St. Petersburg; and we cannot be so dull as not to see that the Russian must always be animated by hate against us for our having trammelled and insulted him as to guarantees for any peace that can be made. We have had enough before our eyes of late events to know that such things are in truth of no value. England, France, Russia and Austria have all violated their engagements within the few past months. The guarantee must be the possession of territory restored."

This is plain language.—Not less important, as a war document, is *The Prospects and Conduct of the War* (Murray), a speech delivered by Mr. Layard in the House of Commons, as an exposition of the "situation" from a man thoroughly conversant with the East.—With this may be read Mr. Sidney Herbert's speech on *The Conduct of the War* (Murray).

Mr. A. K. Johnston has issued a new Map of Europe, which, we suppose, we may also class with the War Documents. It is on a large sheet, mounted, and is said to be drawn from "the latest and best authorities." It is a very convenient map for reference, now that the daily news runs from the Euxine to the Baltic, from the Straits of Gibraltar to the Gulf of Bothnia.—We may also add, that Herr Perthes, of Gotha, has published a Map of European Russia and the Border Countries, on a folded sheet, for the library table.

Will my Readers go to Spain? or, Day after Day for Two Months in the Peninsula.
Brighton, King.

IN the dark age of criticism a Dublin reviewer wound up his attack on Campbell by affirming that the poet had eyes like a dead haddock;—no further could the force of passion go. The Lady who now invites her readers to accompany her in a trip through Spain, deals with the Spaniards in a similar spirit. They are an idle, superstitious, insincere, degenerate, and squinting race. As for the black and radiant eyes on which lyrics have been sung, she reckons them among vulgar errors; and hints that tourists who visit the Peninsula would do well to discard all ideas about Spanish dignity, beauty, and grace. Scarcely has the French frontier been passed before the enchantments lent by distance begin to melt away, and the stranger views with disappointment a throng on the Saragossan *alameda*. The short black cloak, black stockings, and *sombrero* of an *alguazil* at San Sebastian, with

the wine-skins in the streets, had prepared her for a more perfect realization of fancies haunting her memory from 'Gil Blas,' and the light-footed Lazarillo. But mantles and mantillas, donnas and hidalgos, soon lose their poetry.—

"The exalted ideas of the personal attraction of the Spaniards, with which we all came to Spain, begin to fall very rapidly. I believe we expected to see the women all Dulcineas, and the men with the fine martial features and proud haughty bearing which belonged to their race (unless their painters had a sad 'lying fancy'), in those palmy days when Spain held her high place among the nations. The women are certainly extremely graceful, and though short, are very well proportioned. As an amateur 'dabbler' in portrait-painting, I am, of course, an observer of countenance, and amidst the crowds we have met to-day there was not one individual whose portrait I would have cared to paint."

There was a dearth of beauty among the ladies, but the gentlemen were positively ill favoured.—

"The gentlemen, the hidalgos, have remarkably dull heavy countenances, without the slightest animation. Señor P—— asked us if we had noticed how many persons at Pampeluna are hump-backed, for that it is considered quite 'le pays des bossus.'"

Then follows the earliest disclosure of our Lady-traveller's disappointment in the matter of bright Spanish eyes.—

"Two fearful blemishes struck us here. After we had walked up the *alameda*, probably half way, N—— and I observed to each other, upon the immense number of people who had either lost the sight of one eye entirely, or else squinted painfully. O—— had remained behind speaking to José, and had not heard our observation; but as soon as he rejoined us, he said, 'Have you remarked what a number of these people have but one eye, and how many squint?' Señor P—— smiled, but made no reply."

Barcelona in this respect resembled an Egyptian village when a conscription was expected, before the device of a one-eyed regiment was thought of.—

"Again to-day, in the streets, it was painful to see the lack of eyes, and the number of people that squint is beyond belief. If three people are talking together, you may reasonably conclude that one squints, and that the others have but one eye each. A day or two ago, we stopped to inquire of a man who was standing at a kind of lodge-gate, if the garden to which it is the entrance were public. He was speaking with two women. The man was blind with one eye, one of the women was blind with one eye, and the other had something so odd about hers, that whether she could see or not we could not ascertain."

Things were still worse in Madrid. There, on the very Prado, the little gentlemen of Spain appeared in her eyes without nobility of manners or beauty of countenance. This public walk, we are told, is so spacious that it seems as if it had been intended for a taller people than the Spaniards.—

"We were much struck by the very superior complexions of the women to those we had seen elsewhere—owing no doubt to the keen invigorating air. I am sorry to add, that every fourth person squinted: it became positively painful to meet them. No wonder Spanish eyes should be admired, where it is so rare a thing to see two together, and both looking the same way. A carriage stopped very near to us in the *alcala*, and seeing a very nicely dressed little girl get out, I turned to look at her. She squinted most fearfully. I then looked at her brother who followed her, and he squinted exactly the same."

Spanish eyes, being large, dark, and dull, betoken little intelligence in their possessors, since they only sparkle by an artificial light. In the brilliance of the sun they are without meaning or animation.

To this criticism on the *physique* of Spain, we will add one or two notes on its moral condition. The Lady has not much to say of Spanish women; she was informed that—

"they are scarcely educated at all in any way, and that they possess no accomplishments whatever. Possibly one lady amongst a great many may play the guitar a very little, but it is an extremely rare circumstance."

Her husband observed to a Spaniard, of average intellect,—

"How grievous it was to see so fine a country so far behind its neighbours in civilization, and, moreover, that she did not appear to be making any progress. The Spaniard replied, that he did not think that any progress was at all necessary, nor in the slightest degree requisite, for that the fine climate and soil of Spain produced everything that was required for her people!"

She was herself annoyed by the fanaticism of the Spaniards on little points of behaviour.—

"I must not forget to mention a circumstance that is somewhat annoying to us. We find that it is out of the question to hold up our dresses when we walk out. No Spanish lady ever does such a thing, and we see that the eyes of the common men are instantaneously directed to our dress, or to the hand with which we are holding it up. To-day N— merely lifted her dress, about two inches from the ground, which was very wet and dirty, and her gown very long, and a soldier fixed his eyes upon it, and looked astonished."

But what, she suggests, can be expected from a people who possess Havannah and go to London for their best cigars?—who rely on English manufacturers for their Seville soap,—and who, with their plains fragrant with the breath of aromatic herbs and sweet flowers, import all their perfumes from Paris? We must append a word or two to these criticisms. Our tourist is too hasty in her decisions, and too much inclined to broad generalization. Moreover, her Protestantism is so dogmatic that it tempts her to deride and insult the faith of a whole nation. This is not the best temper for a woman, and certainly the worst for a traveller.

Horses and Hounds: a Practical Treatise on their Management. By SCRUTATOR. Routledge & Co.

Hints on Shooting and Fishing, &c., both on Sea and Land, and in the Fresh-water Lochs of Scotland. Being the Experiences of Christopher Idle, Esq. Longman & Co.

SCRUTATOR'S book—and a good, gossiping, clever book it is—on horses and hounds, has recalled to our recollection the witty saying of old Bishop Camus:—"S'il n'est chasse que de vieux chiens, il n'est chasse que de vieux saints!"—"Old dogs in the field and old saints in the shrine, those suit the huntsman and these the divine." Upon the subject of hounds—and especially upon the merits of old ones and the training of young—Scrutator enlarges with an enthusiasm and a good humour that can only be imagined by those who reside near "kennels" and who live and ride in hunting countries. Nor less learned and entertaining is he on the subject of the horse,—his ways, powers, temper, and caprices. We take horses and hounds to be as exclusively English in one way as madrigals and glees are in another. Out of England they are not properly understood; nor in England, by foreigners, are they properly appreciated. Bulwer tells us of a French Count who was sojourning at the mansion of a sporting squire, and who being asked one morning if he were not going out with the hounds, simply, significantly, and conclusively remarked—"J'ai été!" No answer could more truly convey the disgust of a stranger, not accustomed to ride over ridge and furrow, double-banked ditches, and five-barred gates, at our national sport. However, it is this sport which has enabled the English gentry to excel all the world in equitation. The Tartar, who both rides and eats his horse, has

not a better seat in the saddle than an English gentleman; and for a hypochondriac there is no medicine (if he have only courage enough to take it) like keeping the saddle for two or three hours, and following the hounds from the covert side to the "Whoo hoop!"

Scrutator, of course, only talks of the horse as gentlemen are wont to talk of him after dinner, at the end of a long day's successfully terminated run. A writer especially devoted to this noble animal might have looked at his subject a little more widely. The horse, indeed, is "national" with us in more places than the field. The deities of our Saxon ancestors were as fast riders as any of their descendants, who have run in their day with Lord Harewood's hounds. These mounted gods rode foremost in each battle, and none but priests groomed the foaming steeds on their return to the sacred stables. It is singular how saddle-room traditions of to-day may be traced back to the age of the sacred steeds of the Anglo-Saxons. Thus of old, when our fiery forefathers meditated a fray, the holy horse was trotted forth from the solemn stall; and if, on issuing therefrom, he put his right foot forward first, the fact was held as promise of a victory; but if the left, or, to speak by the card, the "near" foot first appeared over the threshold, then nothing but ill luck was augured, and heavy were the hearts of the desponding warriors. With the terrible White Horse of Swantowith we will not meddle; but we may notice of those well-known chiefs Hengist and Horsa, that they were, in sober truth, simply nothing more than the progenitors of the various tribes of horse-dealers. Their names imply *mare* and *horse*,—and they probably dealt in the respective articles. For they were Westphalians,—and what were the West Phali, as honest Hearn somewhere asks, but the Phali, phalin, or foals, famous near the River Weser, and giving a name and armorial bearings to the landed gentry who resided in the vicinity? Our cream-coloured horses which draw the carriages and sacred persons of sovereigns are probably descendants by tradition of the white horse, which was once as sacred to royalty as the white elephant in Siam. The *White Horse* over our inn-doors is, we believe, the remnant of a compliment originally paid to the House of Hanover when it succeeded to the throne of these realms; the horse of that colour being the badge of that House. English eccentricity has often enough been displayed in the matter of the horse. Lord Portland, of William the Third's time, used to give his stud concerts! But this can hardly be called *English* eccentricity, for the noble Lord was not our fellow countryman; and it was at his villa in Holland, as Hawkins relates in his 'History of Music,' that M. le Freneuse saw the gallery in which "concerts were given once a week to the horses to cheer them, which they did, and the horses seemed to be greatly delighted therewith." It was a worse sort of eccentricity which sent Lord Rochester's horse to be baited to death by dogs at the Bankside. It is common to English complacency to boast that no horses of the olden time could perform what modern English-bred horses can; but this is a vain boast. Gibbon speaks, with authority, of horses badly wounded carrying their Imperial masters safe through the terrors of the triple phalanx; and we think that the horses which carried Cortez and his cavalry on the terrible field of Otumba were as gallant steeds as any to be found at the present day. This subject of past and present merit enables us to cite a passage from "Scrutator's" book, which is not without a certain historical interest.—

"Hounds are not so much faster now-a-days than

they were formerly, but the system is faster. I know this is debateable ground, and I shall probably be laughed at for such a remark. But let the fast men of the present day try the experiment; let them match two couples of their fastest hounds against time, over the Beacon Course, at Newmarket, and see if they can beat Mr. Barry's *Bluecap*, who, in the famous match with Mr. Meynell's hounds, ran the four miles in a few seconds over eight minutes. Colonel Thornton's bitch, *Merkin*, is said to have run the same distance in *seven minutes and half a second*. Beat this, my fast young brother fox-hunters of the present day, and then laugh if you can! What also is the comparative speed of the race-horse then and now! To all the sporting world, the names of *Eclipse* and *Flying Childers* must be familiar, and of the latter I find it recorded, 'That in October, 1722, he beat Lord Drogheda's *Chaunter*, (previously the best horse of the day), six miles, ten stone each, for one thousand guineas. He had already, at six years old, run a trial against *Almanzor* and the Duke of Rutland's *Brown Betty*, nine stone two pounds each, over the round course at Newmarket, three miles, six furlongs, and ninety-three yards, which distance he ran in six minutes and forty seconds; to perform which he must have moved eighty-two feet and a half in one second of time, or nearly after the rate of one mile in a minute. He likewise ran over the Beacon course,—four miles, one furlong, one hundred and thirty-eight yards, in seven minutes and thirty seconds!! It is reported that *Flying Childers* did not race until six years old, and that his extraordinary speed and power were first discovered in a *severe fox-chase*, so that we have here the fact of the fastest thorough-bred horse of his day being taken from the hunting field to the course at Newmarket; and if such a horse was the only one to live with the hounds to the end of the run, which is also related, it is a pretty good proof that the speed of the fox-hounds in those times was not of that contemptible order which our present fast men are pleased to assign to them. This may be called an isolated case; but I have good reason for believing, that amongst the first riders of the past generation, thorough-bred horses were generally used, equal in speed, if not superior in stoutness, to those of the present day; and that there was no lack of thorough-bred stock in this country during the past century, may be gathered from the fact, that in the year 1777 there were no less than eighty-nine stallions advertised. How is it, then, that we hear so much of these fast bursts, day by day almost, with fox-hounds in the fast countries, of which so little has been said or written in reference to packs of the past generation; simply because the system of fox-hunting has been completely altered; certainly, in this particular point, not improved? We all allow and call this pursuit of the fox a science; neither is this a misnomer, when we take into consideration the tact, talent and knowledge which are requisite in a huntsman, to carry him successfully through a long and arduous chase; but for a quick burst of fifteen or twenty minutes, going away from a patch of gorse or small spinney, close at the fox's brush, there is no science in this, it is a mere rattling gallop at the tail of the hounds, which a well-mounted stable-boy, who can ride well, is as likely to see the end of, as the most clever huntsman; all that is here required is horsemanship, not head."

Christopher Idle's volume is a pleasant record of experiences, particularly of certain sporting incidents in France. These are told well. French "sport" is a comical matter. One instance must suffice.—

"The moment a Frenchman has killed a jack snipe, you will hear him calling to his dog at the very top of his voice, to bring his game.—'*Apporte vite à ton maître! vite, apporte!*'—and if the dog does not take the right direction, you will hear a considerable portion of that part of a Frenchman's vocabulary which commences with *sacré nom*, &c.; and as your attention will be naturally directed to the quarter from whence the noise proceeds, you will sometimes observe the man and dog both running, the man persevering in his address to his dog.—'*Apporte, sacré nom!*'—and perhaps the dog giving tongue (this I have witnessed), the consequence of which is that the dog generally flushes

five or six snipes before the unfortunate jack is found; and when this is accomplished, and the jack deposited in the *carrière*, or game-bag, without which appendage no French *chasseur* takes the field, then, and not till then, does the Frenchman think of reloading his gun, which of course has had the opportunity, from the moist atmosphere of the *marais*, of getting tolerably well damp, which is followed by an endless number of mis-fires (accompanied by an additional quantity of *sacré nom*, &c.), which are attributed to the caps, and not to this unsportsman-like mode of proceeding. The vexation and annoyance, as well as loss of sport, which would be occasioned by a brace of such sportsmen in a marsh full of snipes, can be more readily imagined than described; and this has very often been my fate. However, French sportsmen are always very courteous and polite, and never offer you any intentional annoyance—at least, I never experienced any during the many years I shot in France."

These volumes will be well bestowed on the shelves of a sportsman's library; and there is, moreover, much in them that will amuse the general reader.

A Conversion.—[*Une Conversion*]. By Count de Raousset-Boulbon. Paris, Librairie Nouvelle.

THE romantic story of the hero of Hermosillo, and his death at Guaymas, lend an interest to the work which he left behind him. Apart from literary merit or demerit, the Count de Raousset-Boulbon's romance was an assured success. For the last few years, the American journals have been filled with narratives of his exploits; and it was with unfeigned regret that thousands heard of the young noble's death. He fell under the fire of the Mexicans, in his thirty-fifth year; leaving behind him a reputation for courage, to which the present volume will add some leaves of a more tender laurel.

We have before us a charming story—earnestly, gracefully, wisely written. It contains passages which forcibly remind us of Balzac's best pictures. It bears a sweet and touching moral:—it is as pure in tone as 'The Vicar of Wakefield.' The main plot is simple enough—simple as the current of daily life. A young nobleman arrives in Paris in his twenty-second year. He falls in with all the fast and vicious young gentlemen of that capital:—he spends his fortune upon suppers at the *Maison Doré*, and with actresses. The story opens at that point of the hero's fortunes where, having sold the paternal estate to pay his debts, he has returned to Paris with a few thousand francs in his pocket and the determination to study Art. On his arrival, he finds a letter from an aunt, which summons him to her side. She talks lightly of his extravagance, and informs him that his cousin in the country—the heiress of the remaining property of the family—is marriageable,—and more, is not indisposed to marry him. The interview ends with a promise on the part of the young man to go at once to Dijon, where this cousin inhabits the ancestral seat under the protection of her uncle.

The description of life in this old provincial town, where grass grows in the streets, and where the fine old houses recall the flourishing days when the Members of the Provincial Parliament inhabited them, is the most attractive, because the most original and truthful, part of the book. The circle of the Langenais is described in pictures as minute and faithful as Hogarth ever painted:—and the cousin whom the young prodigal is to marry—framed in ancestral cobwebs—is a character of which France still has many types, particularly in the sombre streets of the *Quartier St.-Germain* and in the remote and silent provincial towns of the south. Here is the picture in which the lady first appears to the reader:—the scene is

the library of the ancestral seat of the Langenais family:—

Except the books and statues, all is dark in this solemn nave. The high ceiling consists of dark, oaken joists. Nothing can be simpler or severer than the furniture. The massive oaken arm-chairs and stools are covered with cold green velvet, ornamented with gold-headed nails. The central space is occupied by an immense oval table, supported by carved legs, and covered with a cloth as thick as the finger, which hangs about it in massive, motionless folds. There are two stories of windows:—the lower ones are sash windows,—the upper ones, opened by means of a long cord, are three mètres from the ground. At the moment when I arrived, all the windows were closed:—one upper window only permitted a single sun-ray and a breath of air to enter. In the luminous column of this ray, which lit up her head, and left her feet in the shade, Berthe de Langenais was standing near the great table, reading a folio. Her hand rested upon the open page. No doubt a secret instinct told her who the visitor was, for I noticed that a slight blush passed over her face. When her uncle had pronounced my name, she gave me her hand with a friendly manner, and expressed to me, in terms of grave affection, the pleasure it was to her family to receive me. She then added:—"Your arrival is even almost a sacred event to us, since you are the last of the Langenais, and the name must live or perish through you." The tone in which this was expressed was soft; but the words had a solemnity in them, which chilled me. My first impression corresponded with my preconceived picture of Mademoiselle de Langenais. A superior nature, enveloped by her ancient nobility in a poetic shade, I regarded her as the last flower of a blasted tree. She was rather above the middle height. Her figure was developed, but light and graceful. Berthe has remarkable dignity in all her movements:—she is imposing rather than seductive. So pensive is her head, you would declare it had been modelled from a Spanish painting. Her features, as regular as sculpture, are always at rest. The bright part of this fine head, with its rich mass of black hair, are the eyes. The force of their clear, limpid depths is extraordinary,—penetrating and frank, they seem to hold a world of thought. How often have I asked myself when, favoured by the twilight, I have been able to study that dark orb.—Is it the star of innocence?—Is it a fire like that which, strengthened by tears, fasts, prayers, and ardent reveries, was seen, in the cloisters of the olden time, flashing from under the eyelids of nuns? My friend, I cannot believe that there is another woman in the world equal to her whose portrait I have sketched for you. Her place is not in this world,—I cannot imagine what she has come to do here. As for me, familiar with the vapoury ladies of Paris, I remained silent before this creature in black—splendid and gloomy as a messenger from the tomb. Thanks to the provoking good-humour of M. de Langenais, the conversation was turned to subjects which put me soon a little more at my ease. The place where we were naturally turned the conversation to high subjects. We gossiped about literature, history, painting, architecture, travels, scientific discoveries,—every branch of human learning. My dissipated habits have not entirely destroyed the taste which I had once had, as you know, for study. I had learned many things not taught at school,—but I soon discovered how little I knew in the presence of the vast acquisitions of my cousin. Before I had been with her an hour she had playfully run through the gamut of human knowledge. She had no thoughts that did not belong to high spheres, and had not been formed in the style of the great past. Never had words so noble been spoken to me by lips so pure:—never had I been carried away by eloquence more enchanting.

The reader will naturally conclude from the foregoing that the hero has at once fallen in love,—but the fact is not so. He is abashed by the splendid attainments of his cousin:—more, he is soon disappointed, in finding that the young lady has, "like Napoleon, the strongest antipathy against the terrible spirit of innovation

which is spreading over the world." The hero is a democrat,—and, naturally enough, falls into argument with his aristocratic cousin. In the Langenais circle—restricted to an old knight of Malta, a Legitimist lady of ruined fortunes, and an old soldier under Moreau, turned *curé*—the hero finds himself in an atmosphere of ancient prejudices. His "poor diplomacy" leads him into political discussions, of which the following is a fair specimen.—

The benevolence of the old people led me to an avowal of my political faith. Madame de Lancade treated young men of the present time with disdain; the knight appeared conscious of his superiority; my cousin could not talk confidently on a subject of which she was ignorant, but she declared that the young noblemen of the present time appeared to have preserved few aristocratic traditions—which appearance was, according to her creed, a real public misfortune. You know how little I care for what are called aristocratic traditions. Encouraged by the kindness of the *curé* and the tolerance of M. de Langenais, I ended by hoisting an insurrectionary flag against the old *régime*. I allowed that the young men of the present time, by their manners and mode of life, neglected all that is useful, great, and noble, but I attributed these faults to circumstances. I traced their fall to their forced idleness. It was generally allowed that in this solution I was right,—but the solution only led the conversation to an abuse of the revolutions which had brought about this compulsory inaction. The *curé* of Notre-Dame was alone of a contrary opinion. "Want of work," he said, "is more excusable. If the nobility will only employ themselves so long as they are privileged, this resolution is an avowal of their impotency. If they believe themselves to be a superior body, they have only one method of proving their position, and that is by showing that in all things they are better than their rivals." The conversation became political. Mdlle. de Langenais declared, amidst the applause of Madame de Lancade and the knight, that the monarchy of Louis XIV. was the *beau-ideal* of government. "What, cousin!" I exclaimed, "do you wish to carry France back to absolute monarchy, to the clergy, to the noblesse, and the *tiers-état*?"—"And why not?" she replied, in an authoritative tone which surprised me. I began to understand more thoroughly the gaps there were between my cousin and me. Nothing irritates more than political discussion. I could not contain myself, however, and exclaimed:—"But France is now democratic to the core!"—"My child," said the *curé* of Notre-Dame, turning towards my cousin, "Throw these ideas aside. You live in the past, not in the present. The world has advanced: God has reformed it after sixty revolutionary years."—"But still," replied Mdlle. de Langenais, "an aristocracy by birth remains. Can that aristocracy belie the example of its ancestors?"—"The aristocracy has itself proclaimed equality of rights," I replied.—M. de Langenais added, "The aristocracy is ruined and dispersed."—"We are carrying it away with us," said the knight.—Berthe was alone. She said to me, ironically: "Must the aristocracy, then, become republican?"—"Cousin," I replied frankly, "I will own that without having community of action with men of the republican party,—without feeling even any esteem for them generally, I lean towards their principles."—"Be faithful!" said M. de Langenais to me.—"I will always be so to my country."—"You must be faithful as your forefathers were faithful," said Madame de Lancade.—I answered, "The emigration was an error."—"Sir," continued the old lady, "I witnessed it,—we all witnessed it,—even *Monsieur le Curé*, who fought against us under Moreau. The emigration was a consequence of monarchical faith. My husband was colonel of the Regiment of Burgundy; he entered as sergeant in Condé's army. What he did in his devotion to the King everybody did, because, to us, the King was France. The scaffold, spoliation, twenty-five years of war, and invasion have sufficiently proved it."—"Forgetfulness of the past!" interrupted the *curé*. "Peace to the dead!" * * During this discussion, the expression of Mdlle. de Langenais' face had altered. I saw her grow pale; and her eyes seemed to hold back her tears with difficulty. I hastened to change the conversa-

tion, and resolved not to excite again a royalist exaltation which I could not share.

The best part of the story follows close upon this discussion. The haughty lady grows more liberal, becomes even humble, as her love develops for her kinsman. The manner in which the current of this love is troubled, and the behaviour of Berthe to her rival (who is a pretty, blonde cousin), are parts of the story charmingly told. The hero, balancing between Berthe the heiress and her cousin Claire the lovely, but dowerless,—now enjoying a tender interview with the former, now in ecstasies of love after a walk in the garden with the latter,—is human, perhaps, but certainly not heroic. He knows that Claire loves him,—and the following scene proves to him that Berthe, who believes herself affianced to him, does not anticipate a mere *mariage de convenance*.—

Berthe became almost tender :—she revealed herself in a new light. There were in this grave and severe aristocratic nature depths of sweet abandonment—perhaps of love. She took my arm, and leant gently. We made two or three turns through the alleys. She frequently raised the flowers I had picked for her to her face: they seemed to have established a sudden intimacy between us. About eight o'clock every morning the windows of the reception-rooms are thrown open, to drive some of the humidity from these vast, uninhabited places where the family pictures rest in solitude.—“Come,” said Berthe; “I am in the habit of going there every morning: there I am surrounded by the dear spirits of the past. Our good *cure* of Notre-Dame calls this my aristocratic weakness; he is deceived. I am not vain of my birth: it is a charge which God has given me,—and it is thus I regard the honour of belonging to an ancient race. This charge imposes heavy duties upon me. I am not proud of the advantages which it offers in the eyes of the vulgar; but when I find myself, as now, in the midst of the relics of ancestors, it seems to me that I belong to them and not to myself. In noble families, the individual is nothing—the name everything. The honour and glory of the house absorb us entirely. You will, perhaps, think these opinions arbitrary;—it would be a sacrifice to me to renounce them. However, you are of the same blood as myself. The future of the family rests with you: its past history is summed up in you. I am disposed, therefore, to feel considerable deference for your way of thinking.”—There was in these words, but above all in the manner with which they were spoken, a tone of humility—almost of submission—that impressed me strongly. Could this proud spirit be thus humbled,—this religion of the past, so absorbing, so trustful, almost fanatical, which seemed to offer the forgetfulness of all to me, for the religion of the future? The commanding look of the heiress of the Langenais Vandancourt, seemed to embrace me through her half-closed eyelids. She waited an answer. I wished to be frank—without wounding her delicate susceptibility.—“My cousin,” said I, using the most persuasive tone and words, “listen to me attentively. I am, like you, not vain of my birth. I think, with you, that a great name imposes heavy duties; but it appears to me that these duties have become less imperative since a new form of society has consecrated an equality of political rights, and abolished the aristocracy. Formerly the Government, military commands, the care of the Crown, the parliaments, all public life, were the privileges of the nobility. The nobleman was born with functions to fulfil :—he then had exceptional duties, and a hundred years ago your theories on the aristocratic position would have been sound; but now all is changed. The noble, having no more privileges than the *bourgeois*, has no heavier duties. The extent of duty is measured by the extent of power. The nobleman of to-day is as completely emancipated from his ancestors as from political society. He owes to the past only that which he owes to himself—respect. In this, the *bourgeois* should act equally with the noble. I said to you yesterday, the aristocracy is dead. Let us respect its ashes, since they are those of our ancestors. Let us honour our forefathers—let us piously worship them—let us

fill ourselves with their examples;—but let us not seek to mend a broken chain. The future will be based upon democracy—or there will be no future. Republic or monarchy, France will remain as she is now—democratic. This is my profound conviction. Instead of opposing to social progress a resistance which would prevent its regular development, let us throw ourselves bravely into the ranks of democracy—let us cease to make a vain parade of our titles and our parchments—let us not return to the past, but advance to the future.”—“But,” interrupted my cousin, “do you believe in this future?”—I bowed my head; for I have little faith in the future of France. I answered, however, pleasantly,—“Our country is falling rapidly. The men who first impelled its downfall were the nobles of the eighteenth century. For sixty years past the *bourgeois* have accelerated this journey to the abyss :—before long, power will be in the hands of a pure democracy. If the *bourgeoisie* and the nobility do not hasten to abdicate, and to march with the masses, whom they might enlighten, moderate, moralize and govern, France will soon see the days of a new barbarism; but if from to-day we contribute, by our sincere efforts, to strengthen the infant democracy, France will open to her children an inexhaustible prosperity.”—Berthe had remained some minutes resting, in a pensive attitude, upon a console; her head supported by her hand. I noticed that she grew pale as she listened to the democratic ideas of a Langenais.—“My cousin,” she replied, with a tone of sad resignation, “I am but a provincial. I have remained here, shut up, to the present day,—a stranger to the current of ideas which impels the present epoch :—you have lived in the very centre of all progress—in the light of every new idea. You ought to know more than I about these things,—and then you are the chief of the Langenais!”—There was a tenderness in her words which I could not misinterpret. The mind was silent at this time, and the heart had begun to speak. I understood it, and felt a new sentiment within me. Could I see this marble statue palpitate and grow warm without emotion? Berthe de Langenais, leaning upon an antique console, dressed in black, the forehead slightly red, indecision in her burning eyes, appeared to me with a charm I had never felt before. It was no longer the fine girl with the severe profile, who had talked to me over a folio, in an immense library as gloomy as a necropolis. That imposing creature whom I had regarded through an Olympian cloud, upon whom it appeared to me impossible to lay a profane hand, was stepping down from the pedestal upon which my imagination had placed her. The statue was softening to the woman, and I was the Prometheus who had lit the sacred fire in this hitherto inaccessible heart. At the sight of my work, I grew very proud. I was changed to myself. I felt myself raised to the height from which this woman had descended to me.—I who, the evening before, had felt so insignificant beside her. * * An hour before, nothing resembling love drew me towards this young girl; now it seemed to me that a thick bandage had fallen from my eyes, and that the light streamed in upon me. I felt my heart rising to my eyes and lips. My blood rushed through my arteries, an irresistible revolution was going on within me. Astonished and fascinated, I approached her, took her hand, and said to her, in a tone of profound emotion: “Your heart is as admirable as your intelligence, as your beauty.” I had pressed her hand: it was burning. She permitted this for a moment. She was pale as a lily. I thought she was going to faint; but she lifted my flowers, gently withdrew the hand I still held, and went away, making a farewell gesture to me.

The more dramatic parts of the under-plot are commonplace. The English lord of sixty, who has married a young girl, and the story of this noble lady's intrigue with the hero's villanous friend—the duel which ends in the death of the Lord and his opponent—the retirement of her Ladyship to a convent—are the well-worn materials of romance. Yet in the hand of Raousset-Boulbon even these acquire new interest and appear fresh. The hero's struggle to love when it is his interest to love—the dexterity with which types of French polite

society are introduced and made to serve the moral of the story—the finished portrait of the young Legitimist lady, who renounces the hero in favour of her blood cousin, and returns to her folios and her sombre library :—all are points of excellence in the work, which are heightened by a manly, liberal spirit in the treatment. It would be well for the reading public of France if they had more books of fiction like this ‘Conversion.’ The promise of its pages will add to the regret which the author's premature death has spread through many households.

The History of British Guiana; comprising a General Description of the Colony: a Narrative of some of the Principal Events from the Earliest Period of its Discovery to the Present Time; together with an Account of its Climate, Geology, Staple Products, and Natural History. By Henry G. Dalton, M.D. 2 vols. Longman & Co.

Dr. Dalton's work contains a full account of British Guiana, of its settlements, its plantations, its trade, climate, and natural history. Such a description had not previously been written; and this was a curious fact, considering the importance of the territory and the early date of its intercourse with Europe. We possessed, it is true, the notices of Humboldt, the reports of Sir Robert Schomburgk, and the compilation of Mr. Martin, with a few travellers' sketches and journals; but these were detached and scattered. To civil functionaries, merchants, and planters, a connected view of the colony, of its progress and its resources, was necessary,—and this has been supplied by Dr. Dalton. The book now in our hands is deserving of praise. It is copious, methodical, and full of information. It represents the condition of British Guiana at different stages of its history; it contains records of the successive administrations, with their results impartially compared; and it lays open the stores of natural wealth which exist in that country, and offer inducements to agricultural and commercial enterprise. The writer's political economy, of which we here and there obtain a glimpse, may be based on narrow studies, as some of his historical ideas are evidently derived from tradition,—but his remarks are delivered with as much modesty as candour, and in all his statements there is obvious caution and fidelity.

That portion of Guiana which belongs to Great Britain has been slowly colonized and slightly cultivated, and yet it was once a land of promise to the dreamers of Europe. Adventurers went from Spain, Holland, and England, in search of an ideal El Dorado, a city of gold, and a Silver Lake, beyond its deep savannahs. Many of them perished in those wilds of pathless verdure. Sir Walter Raleigh heard and believed relations “of that mighty, rich, and beautiful empire of Guiana”; and when he visited it himself, saw with eyes still full of illusion the graces of its landscapes and the riches of its soil. The air was ever fresh, the stones in the brooks were precious, the trees glittered with the wings of white, crimson, and carnation birds; and the hills rose like towers of crystal! These visions allured many a band of explorers, who were reconciled by the dazzling phantom to all the perils of that savage realm,—poisoned arrows, deadly reptiles, sickly heats, rains that showered like floods upon the earth, and those innumerable terrors which the imagination always adds to the unknown. However, since that epoch of daring enterprise, the complexion of European ideas has changed. Guiana, which was a radiant paradise, has been viewed as a region of fens and fevers, inhabited by pallid settlers, whose sole hope of life was to gather a rapid fortune on its shores—no less fertile than

pestiferous—and to fly from them while still young enough to regain their wasted strength. Dr. Dalton has a better report to make, for, while admitting several dangerous peculiarities in the climate, he presents the statistics of health and mortality in Guiana in no unfavourable parallel with those of other places of reputed salubrity.

It would, indeed, be unfortunate were any false impressions to turn away the current of enterprise from so valuable a territory. Guiana, with an area of 100,000 square miles, an extended coast line, and several navigable rivers, possesses a rich soil, and produces many rare and coveted articles of trade. These Dr. Dalton describes in their appropriate order, and his account is enhanced in interest by many graphic pictures, sketched in the forests and on the banks of rivers. Guiana, if not the golden Arcadia described by Raleigh, still abounds in the romance of natural beauty. Its vegetation, its birds, its creeping things, are all brilliant and superb—the trees are of vast growth—the moss is deep and soft—even the meaner insects are picturesque in their sylvan swarming-places. They are by no means so, however, when, as Dr. Dalton tells us, a ball-room at Georgetown has to be swept between the dances to clear the floor of beetles!

As to the aborigines of this extraordinary country, the book contains many interesting details. We select for quotation a characteristic description of the *lex talionis* in practice among them. It is a fearful idea:—that of a man condemned to silence until, wandering from path to path, he has overtaken one whom he is destined to murder. When a death has happened in a tribe, and suspicions of foul play are raised, a council is held.—

“A pot is filled with certain leaves, and placed over a fire; when it begins to boil over, they consider that on which side the scum falls first, it points out the quarter from whence the murderer came. A consultation is therefore held, and the place is pointed out, and the individual whose death is to atone for that of the deceased. If he cannot be found, although he will be sought for years, any other members of his family will suffice. One of the nearest relations is charged with the execution of the direful deed. The ‘canayi,’ or the avenger of blood, forthwith puts on a curiously-wrought cap, takes up his weapons, and pursues his path in search of his victim. From the time of his leaving until his return home he is to abstain from meat, and lives upon what the forest supplies; nor is he allowed to speak with any he may meet on his road. Having made his way to the devoted place, and finding his victim there, he will lurk about for days and weeks till a favourable opportunity shall offer to perpetrate his revenge. If the victim pointed out be a man, he will shoot him through the back; and if he happens to fall dead to the ground, drag the corpse aside, and bury it in a shallow grave. The third night he goes to the grave and presses a pointed stick through the corpse. If on withdrawing the stick he finds blood on the end of it, he tastes the blood in order to ward off any evil effects that might follow from the murder, returning home appeased, and apparently at ease. But if it happens that the wounded individual is able to return to his home, he charges his relations to bury him, after his death, in some place where he cannot be found, and having done so, he expires, not without great pains and fearful imprecations. The reason why the avenger of blood attacks his victim from behind is evident from the circumstance that the Indian is always found armed, at least with a knife. And again, the reason why the victim desires to be buried where he cannot be found, is to punish the murderer for his deed, inasmuch as the belief prevails that if he tastes not of the blood he must perish by madness. If a woman or child be the victim, their death is brought to pass in a different way. The individual is thrown down on the ground, the mouth forced open, and the fangs of a venomous serpent driven through the tongue. Before the poor creature can reach home, the tongue becomes inflamed

and swollen, and she is unable to tell who did the deed, and death is sure to follow.”

The book is one of original and various interest; and possesses a general as well as a special importance.

Memoirs of Anne, Duchess of Brittany, Twice Queen of France. By Louisa Stuart Costello. Cash.

A writer in want of a hero is sure to find what he wants in Brittany. Suffolk itself, prolific of worthies as it is said to be by the Author of ‘Crewe Rise,’ is not near so rich in this respect as that old corner of France which was for so many years a thorn in its side.

Miss Costello has been lucky in her selection of a heroine, and she has told her story briefly, rapidly and gracefully. In the fifteenth century, Francis, the last of the Dukes of Brittany, in some measure resembled the late Duke of Parma,—wickedly neglected his duties, and made a menial his Prime Minister. His daughter and heiress, Anne, was the object of many suitors, but was finally married to two successive Kings of France—Charles the Eighth and Louis the Twelfth. The latter is popularly known to novel readers as the Duke of Orleans, in ‘Quentin Durward.’

Anne had been promised to more than one suitor before policy wedded her to Charles the Eighth. That policy overthrew the independence of Brittany, and gave a rich province to France. When the sovereign Duke and sovereign King were at issue, the latter always looked upon Brittany as the door through which the English could, at any time, be most unwelcomely brought into his presence. The acquisition of Brittany therefore was essential to the tranquillity and the glory of France. To secure such acquisition, the sword and saltpetre had destroyed many hundreds of “good stout fellows.” At length, the end was attained by marriage which could not be accomplished by war.

But Love and War go hand in hand throughout this stirring record,—and admirable, especially, is the confusion made by Love. Louis the Eleventh compelled Louis of Orleans to marry his plain daughter, Joan, on threat of drowning him if he refused. Poor Joan thus obtained an exceedingly brutal husband, who was very illegally loved by her sister Anne. Now, Anne was Regent of France when the youth, Charles the Eighth, succeeded to the throne. Louis of Orleans liked her little better than he did her sister, his deformed wife; but he very early learned to regard Anne of Brittany. His opposition by arms against the Regent ultimately brought him into a captivity where he was treated by the loving lady whom he despised with an atrocious cruelty, which even the *spretæ injuria formæ* can hardly account for. During five years he was thus closely imprisoned, and as if a dungeon and gyves were not enough, he was made the occupant of an iron cage, with the heaviest of fetters hanging to his bruised limbs. He owed his liberation to a spontaneous act of the young and now independent King; and save in his treatment of his wife, the crooked but straight-principled Joan, he used his liberty to especial good purpose. In his retirement at Blois, he devoted himself to study, refined his mind, and lived like an honest country gentleman. He was still soldier enough to wear his sword ever ready at his country’s call, and still courtier enough to appear occasionally at Court, and do homage to the “Queen-Duchess,” Anne of Brittany, and her husband, the liege lord whom she had married—“against her will.” But thereon, and most unexpectedly, a sudden blow on the head of the King, walking heedlessly along,

cost Charles his life; and Louis succeeded not only to the Crown, but to the Queen Dowager. They had been lovers of old, and Miss Costello takes pains to show that they continued so long after he got divorced from Joan by power of a lie, and therewith joined hand and heart with Anne. We fear, however, that this was not the case. However warm their love may have been when both were young, it is a fact that there was much discord between them after they were wedded. We know that their so-called correspondence does display a very respectable amount of warmth of conjugal affection, but then the letters of which it consists are the compositions of the Court poets,—men who make assertions that may be more amusing, but which are as little trustworthy as statistics generally. Those who may be curious on this point we refer to Laurentie’s ‘History of the Dukes of Orleans.’

Louis,—who, it may be stated by the way, was the first Duke of Orleans who occupied, what so many worthy Dukes of that house have so ardently sighed for, the throne of France,—was doubtless grieved when death robbed him of his consort, Anne of Brittany; but he speedily found comfort in espousing another lady; in whose love-affairs also there had been some confusion. That lady was Mary Tudor, the gentle sister of our Henry the Eighth. She, too, had been promised to marry, and loved but one. Meanwhile, she was given to Louis, who clapped his feeble hands, and uttered an unsavoury oath, in very ecstasy on beholding her. In a few months the worn-out Louis was in his grave, and Mary was free to wed with the man of her heart, Charles Brandon, Duke of Suffolk.

Of this drama, in which there is assuredly more of love than of war, we proceed to give some fragments of some scenes. Here is Louis in prison visited by Joan.—

“At length it reached the ears of Charles that his cousin was seriously ill in his prison; and the Regent, alarmed at his perseverance in making inquiries, and fearing that her rigour would be harshly commented on by the people, allowed herself to be so far softened, that permission was given to Jeanne to visit her husband in his sickness. Accordingly, she set forth, with a trembling heart, towards the place of his detention; and it is said, that, when she came within sight of the Grosse Tour, she burst into a passion of tears, which she was unable to repress when she was conducted to the dungeon, in which she beheld him pale, worn, and languishing in untended sickness. She exclaimed, on entering, ‘Ah, Monsieur! en quel état vous voilà.’—Louis, looking up from his miserable bed, on seeing who it was whose voice had startled his wretched musings, turned away, saying, ‘Madam, you have reason to hate me, but leave me in peace!’”

Poor Joan retired to a convent in the neighbourhood, where she sold her jewels in order to furnish her worthless husband “with the necessities which the cruelty of the Regent had denied.” Here is a not unskillfully limned portrait of Anne herself.—

“The qualities of her mind and her manners answered entirely to those of her body. She is represented as remarkably eloquent, a natural gift which was early developed in her, for she is said to have always expressed herself with great dignity; she was rapid in perception, had much judgment, was sensible and judicious, and had a peculiarly agreeable address. Her heart was full of warmth and kindness towards those she loved: she was very generous and charitable, frank and truthful, and quite conscious of her duties as a Queen. Her defects were great pride, which resisted control, and prevented her from forgiving with readiness. On one occasion, when injured by the Maréchal de Glé, she carried this feeling to vindictiveness; and this in spite of the magnificent example of her second husband, so peculiarly opposite in this respect. In common with most of the powerful, at her period, she felt the charms of vengeance.—a weakness to which Louis XVII. was an exception.

She was strict in her religious duties, even to bigotry, and severe to others; resolute to obstinacy, persistent in her opinions, frequently to an extent which occasioned difficulties in the State. But her good qualities overpowered her faults, for the latter seldom appeared, while the former were in daily evidence. One virtue she possessed that influenced her age and contributed to change the character of the Court, which, in the previous reigns, had fallen into a dangerous laxity of morals, and this was extraordinary correctness of conduct and modesty of demeanour. Her natural purity of mind led her to shun the very appearance of levity in her own actions, and the sight of it in others shocked her so much that she allowed no lady to approach her whose character would not bear the strictest investigation. So renowned, in fact, did her Court become afterwards for the perfection of its morality and correctness of conduct, that to gain a bride from amongst the young ladies who composed the suite of the Queen was the object of ambition with all the nobles of the time, and to be permitted to place their daughters under her eye was the most anxious wish of all the mothers who desired to see them respected and admired."

Anne of Brittany was extremely anxious upon two points,—the union of Austria and France by marriage, and the furtherance of the Romish faith. She failed in both these objects. Such unions as that alluded to have ever been fatal to the contracting parties. Louis the Eighteenth was so firmly convinced of this, that when all the members of the exiled Bourbon family were deploring, in his presence, the annihilation of their hopes by the marriage of Napoleon with Maria-Louisa, he gaily asserted that the fruit of such a wedding was hope for the Bourbons. Anne failed to obtain an Austrian prince for the hand of her daughter Claude; who became the wife of Francis the First. The second daughter, Renée, was the famous Protestant Duchess of Ferrara; who will for ever be gratefully remembered as the friend of Calvin and the patroness of Olympia Morata.

Miss Costello's contemporary portraits are well sketched. The slight outline of the renowned Cordelier preacher, Olivier Mailard, conveys much in a few touches. It is a softened portrait, however. Miss Costello perhaps is not aware how he apostrophized the wives of the counsellors who had offended him by wearing embroidery. "You will say to me, probably," he remarked, "we do not paint our faces. Thirty thousand devils fly away with your faces; and you, too, my ladies! You will say to me, perhaps, that 'this embroidery is at least got honestly by the labour of our bodies.' Thirty thousand devils fly away with the labour of your bodies; and you, too, my ladies!" Such was the sound of a pulpit-note from France, when Savonarola was awakening nobler echoes in the pulpits of Italy. But for the record of the times and of their moving accidents, we refer our readers to the most agreeable volume for which we are yet indebted to the pen of Miss Costello.

OUR LIBRARY TABLE.

Knowledge is Power: a View of the Productive Forces of Modern Society, and the Results of Labour, Capital and Skill. By Charles Knight. (Murray.)—In this pleasant work Mr. Knight combines the substance of two former compilations—"The Results of Machinery" and "Capital and Labour." The volume will be of interest to the young. It contains readable and familiar explanations on the subject of industrial progress, and illustrates the effects produced by modern science on the arts and appliances of social life. But as Mr. Knight obviously addresses himself to the "lower forms," we think it was injudicious to digress on points connected with the more abstruse and debateable principles of political economy. Such illustrations as the narratives of Ross Cox, Peter the Wild Boy, the Savage of Avignon, Selkirk and Crusoe, are in keeping with the popular style of the book; but

amusing notes on the hot blast, on the brickfield, on globe-making and shot-foundries, will not prepare the student for disquisitions on the mutual interests, rights and duties of capital and labour, even though the essayist explains that "when two men ride on one horse, one man must ride behind,"—an apophthegm—and an application—worthy of the Author of "Proverbial Philosophy." We can accredit Mr. Knight as a collector of entertaining and instructive varieties on the practical topics of an encyclopædia; but we do not always accept his theories.

Anti-Slavery Recollections. By Sir George Stephen. (Hatchard.)—Sir George Stephen attempts to lighten his memorial of the Abolition Movement by interspersing a few sketches of political life and character. The principal merit he may claim, however, is that of having told a plain story without flattery of himself or others. He was, perhaps, aware that his subject had become tiresome on account of the repetitions and "much speaking" which have been so plentiful of late, and he has kept in mind a suggestion of the Anti-Slavery Society for the guidance of its lecturers:—"Whatever you do, avoid the pathetic!"

An Historical Narrative of the Battle of Wakefield in 1460; with an Account of the Engagement on Wakefield Green in 1643. By George Tyas. (Wakefield, Tyas.)—This may be found useful as a guide-book. The writer seems to suppose that the "quick" and "merry Wakefield," the town of the jolly "Pinder," has lost its right to be regarded as possessed of a more than ordinary share of "mirth." It may be so; but we do not learn that the cause of its peculiar jollity—the abundance of barley grown and malt manufactured in the neighbourhood—has ceased to exist.

The Frontier Missionary: a Memoir of the Life of the Rev. Jacob Bailey. By William S. Bartlett, A.M.; with a Preface by the Right Rev. George Burgess, D.D., Bishop of the Protestant Episcopal Church of Maine. (Collections of the Protestant Episcopal Historical Society, Vol. II.) (New York, Stanford & Swords.)—Jacob Bailey was born at Rowley, in New England, in 1731. Educated at Harvard, he came, in the spring of 1760, to England, where he received episcopal ordination, and immediately returned to Pownalborough, in Maine, as a missionary of the London Society for the Propagation of the Gospel. On the rupture between the American colonies and the mother country, Bailey remained loyal. After passing through many troubles, he went to Nova Scotia. There he obtained an appointment from the Propagation Society as Missionary at Annapolis, where he continued until his death in 1808. Such a life offered little that was likely to be attractive to a biographer. But Bailey left behind him voluminous journals and other papers; and from them, with such additional matter as ingenious writers are never at a loss to supply, a goodly volume of more than 350 pages has been compiled. To an English reader, the matter which is of chief interest is the brief account of what Bailey did, and whom he saw, in England in 1760. Landing at Portsmouth, after a quick but stormy—and in many other ways disagreeable—passage of eight-and-twenty days, he travelled to London in what he calls a "stage machine," which was a coach capable of containing six passengers. It was drawn by six horses; and each passenger was strictly limited to fourteen pounds of luggage. Behind the coach was "a large apartment," which would contain seven or eight persons, but was wholly uncovered:—this was the old "basket." On arriving in London, Bailey lodged for a night at "the great Spread Eagle Inn, Gracechurch Street," and afterwards in a family frequented by the American clergy. Going to Lambeth in company with a fellow candidate for ordination, they were conducted to Archbishop Secker with what the young American esteemed "a vast deal of ceremony," through walks, and halls, and chambers, which he pronounces wonderfully grand and spacious. The archbishop received them with his blessing; and after half-an-hour's familiar conversation, sent them to Dr. Nichols, the examining chaplain, with his recommendation. Bishop Zachary Pearce, acting for the Bishop of London, ordained him

and other deacons at Fulham. They were afterwards regaled in the bishop's hall in such sumptuous manner, and with such profusion of dishes and attendants, and such glitter of glass and gold plate, that "many of us could scarce eat a mouthful." Glad to escape from all this grandeur, "paying eleven shillings a piece for their orders," they "drove into the city, and took a dish of tea together." On a day of public fast, Bailey went to Whitfield's "famous tabernacle," near Moorfields. He calculated that not less than 10,000 persons assembled in and about the chapel "to hear the entertaining impertinence of that gentleman." After receiving priest's orders from Terrick, Bishop of Peterborough, Bailey had a final interview of a melancholy kind with Sherlock, Bishop of London, Hoadley's opponent. Bailey describes him as being in a state of the most distressing bodily suffering and infirmity. The only other person of any celebrity with whom Bailey had any communication, was Benjamin Franklin, then living in Craven Street. Bailey dined with him at two o'clock. "We had four ladies at table. They all dined in full dress, without so much as taking their hats from their heads."

The Wonderful Drama of Punch and Judy and their Little Dog Toby. By Papernose Woodensconce, Esq. (Ingram & Co.)—It is said of Cambacères that nothing amused him more than to stand daily, for an hour, and witness the gambols of *Polichinello*. In like manner, we are told of more than one Italian scholar who in the witticisms of *Pulcinello* found relaxation doubly welcome after severe study. Nay, we know that half the mob on the *Place de la Révolution* turned from seeing the execution of Louis the Sixteenth to witness, with another sort of ecstasy, the decapitation of Punch under a mimic guillotine. These several representations of the wooden wit must have possessed higher merit than the poor hero of Mr. Woodensconce's drama. Montgomery relates that from his boyhood he could never see the person of Punch without a sort of disgust. The Punch in the illustrations of this book must be the counterfeit presentment of Montgomery's old horror. Can there be a public for such a production as this?

Cinderella and the Glass Slipper. Edited and Illustrated with Ten Subjects, designed and etched on Steel by George Cruikshank. (Bogue.)—This is a "moral" reprint of the famous fairy tale. It has been re-written and a great deal of fun added to it, without detracting from its former fascinations. The illustrations are original, and we need only announce the name of Mr. Cruikshank to insure for it an uproarious reception in the nursery.

Grimm's Home Stories. Newly Translated by Matilda Louisa Davis. Illustrated by George Thompson. (Routledge & Co.)—This purports to be a new translation of the Fairy Tales of the Brothers Grimm, but we have met with several of them in a prettier dress elsewhere. Of course many of these stories are old, and some of them, we may add, are commonplace in the extreme. Many of the names are changed, and the tales slightly altered, but the substance is the same. The 'Twelve Brothers' we have seen under another name, and certainly far prettier. We regret exceedingly that in tales of this kind, falsehood, disobedience, cunning and cruelty, should be so openly allowed in the heroes and heroines—but suppose we must receive these old fragments from the Northern imagination without a protest.

The Kaleidoscope; or, Worldly Conformity. With an Introduction by the Rev. Edward K. Elliot, Rector of Broadwater. (Nisbet & Co.)—The 'Kaleidoscope' is an excellent book, suited to big boys and girls:—it is a sketch of the home circle of a clergyman's family, where the children are ruled with firmness and kindness combined. The teaching is gentle and winning, and we feel assured that its lessons will be instructive.

Augustin, the Happy Child. From the French of Madame Clara Monerod. (Edinburgh, Constable & Co.)—This translation of the pretty tale of Madame Monerod is instructive and useful for inculcating a desire for occupation in the young,—showing the pleasure and contentment to

be derived from industrious habits. The hero of the story is a benevolent and truthful child, who is enabled to be of service to others through the spirit of industry which pervades all his motions.

Familiar Fables, in Easy Language, suited to the Juvenile Mind. By Miss Corner. The Illustrations by Alfred Crowquill and James Northcote, Esq. (Dean & Son.)—This is a simple and amusing edition of Æsop's Fables, particularly suited to the understanding of the little people for whom it is designed.

The Little Play of Mother Goose. Edited by Miss Corner. Illustrated by Harrison Weir. (Dean & Son.)—The old, old fairy tale of 'Mother Goose' is here dramatized for juvenile performers. The verse is simple, and could be easily committed to memory by such youthful amateurs as may be desirous of figuring in a fire-side play. There are plenty of directions, so that the nursery actors could manage to get up a performance without the assistance of a stage-manager.

Achilles—[Achill]. By P. W. Forchhammer. (Kiel, Akademische Buchhandlung; London, Nutt.)—In a series of semi-popular lectures, M. Forchhammer endeavours to prove that the Iliad is a physical allegory, setting forth the struggles that take place on the Troad, between the forces that threaten to overflow the plain and the forces that have an opposite tendency. Achilles is the river that overflows its banks, Hector is the river that keeps within bounds. The theory is worked out with a great deal of care and acuteness; though perhaps a desire to be popular has rendered the author less interesting than he would have been had he adhered to a course of dry learning. He shrinks from all appearance of exclusively addressing the classically erudite, avoids Greek characters, administers his etymology in homœopathic doses, and by this cautious mode of procedure mainly appeals to the classes who must of necessity be totally indifferent to the subject of his investigations. Had he bestowed upon the study of modern human nature the labour he has expended upon the geography of Troy and its neighbourhood, he would have found out that, beyond the sphere of special antiquaries, few persons will feel their hearts beat high at the announcement that the swift-footed son of Thetis turns out to be nothing more than an—overflow. Such sports belong to the learned world only, and cannot be conducted in too learned a tone. However, setting aside all considerations of M. Forchhammer's audience, let us endeavour to give a notion of the reasoning by which he makes out his theory. The pedigree of Achilles begins with the river Asopus, whose daughter, Ægina, was carried off by the eagle of Zeus. The father followed, and the thunderbolt of the divine seducer hurled him back to his original bed. Now who can be the daughter of a river except an exhalation? The abduction of Ægina is no more than the ascension of a river-mist into the air. Old Asopus goes after her,—that is to say, the river continues its exhalations till the bed is nearly cleared. In the meanwhile, heavy clouds are formed, and these discharge themselves, not without the accompaniment of lightning. The exhalation has turned to rain, and Asopus goes home again. To proceed:—the son of Zeus and Ægina was Æacus, a sort of rainy god, or Jupiter Pluvius, as we learn from the very respectable authority of Pausanias (ii. 29, 8), who tells us that in a time of drought the consultation of Æacus was especially recommended by the Delphic oracle. Æacus married Endeis, the nymph of the spring,—that is to say, the rain-water combined with the spring-water, and the stream which had hitherto flowed quietly was converted into a muddy torrent. Such a torrent, wherever found, is a Peleus; and the difficulty which the turbid waters find in mingling with the sea in certain localities is symbolized by the coyness of Thetis when Peleus sued for her hand. When, through the influence of the wind, the sea is impelled against the river, while the river increases in violence, an overflow ensues; in other words, Achilles is born unto Peleus and Thetis. Such a phenomenon takes place at the mouth of the Sperchius in Thessaly, the reputed birthplace of the hero:—such a phenomenon also takes place at the mouth of the Simois, the scene of his glory.

We have said quite enough to show the purport and principle of M. Forchhammer's theory; which is an ingenious specimen of the cosmic manner of interpreting ancient fables. As the nature of the Troad has much to do with the exploits of the heroic "overflow," a map, which is minutely explained, accompanies the little work.

Relating to special topics and classes, we have a revised edition of Mr. G. Hume's *Waifs of Womanhood: a Plea for "Unfortunates,"* written in a kindly and sanguine spirit—A tale, in rhyme, by H. H. H., of Birmingham, called *The Children of the Street*, conceived in an equally tender vein; but sadly weak, though not so hopelessly ridiculous as *Dress and Needle Women: in Dogmatic Doggerel*, by Peter Pink, who affects sarcasm and pathos, but limps in every line.—The Trustees of the Perkins Institution and Massachusetts Asylum for the Blind have published their *Twenty-second Annual Report*, conveying some information to the charitable.—On the collateral subject of medicine, we may enumerate *The Piratical Specific: a New and Infallible Mode of Treatment for the Asiatic Cholera*, by Dr. F. Wilson,—a paper on the *Climate of Madeira*, by J. M. Bloxam,—and *Unsoundness of Mind in reference to Criminal Acts*, by T. C. Bucknill, who adds law and metaphysics to medicine.—*The New Theory of the Origin of Gold*, by S. Davis.—*Suggestions in regard to the Rate of Interest on Landed Securities*, by W. T. Thomson,—*Observations and Suggestions on the Sale of Land in Ireland: Suggestions for a Simple Method of Decimal Notation and Currency*, by J. Alexander,—and *A Paper on Partnerships with Limited Liability*, are more or less of a special character;—while Mr. A. Hayward's *Facts and Proofs against Calumnies and Conjectures*, and the Rev. R. W. Morgan's *Correspondence and Statement of Facts* are entirely of a personal nature.—Of a personal nature, also, is Mrs. Pullan's *Maternal Counsels to a Daughter*, a volume which, after dealing largely in commonplace which are either trite or obsolete, winds up with a recommendation of the authoress's Training Institution.

LIST OF NEW BOOKS.

Alison's (Sir A.) *Life of Duke of Marlborough*, 3rd edit. 2 vols. 30s. Baird's (J. S.) *First Latin Vocabulary*, 12mo. 1s. 6d. cl. Bell's *Poets*, Vol. 14. Thomson's *Poetical Works*, Vol. 1, 2s. 6d. Bentley's *Monthly Vol.* Jesse's *Coat of England*, Vol. 2, 6s. cl. Bible *Thoroughly*, Preface by Henry W. B. Mackintosh, new edit. 7s. cl. John's *British Classics*, Burke's *Works*, Vol. 2, 12mo. 3s. 6d. cl. John's *Classical Library*, Suetonius's *Twelve Cæsars*, 12mo. 5s. John's *Eccles. Lib.* Philo-Judeus's *Works*, by Yonge, Vol. 3, 7s. 5s. John's *Illustrated Library*, Robinson Crusoe's *Adventures*, 5s. John's *Scientific Library*, Hunt's *Elementary Physics*, 12mo. 5s. John's *Standard Library*, Condé's *Arabs in Spain*, Vol. 2, 3s. 6d. Pons's (Dr.) *Night of Weeping*, new edit. 1s. 2s. cl. Fourné's (J.) *Treatise on Screw Propeller*, 2nd edit. 4to. 38s. cl. Cousins (H.) *A Tale*, 12mo. 5s. cl. Cumming's (Dr.) *Book of Genesis*, new edit. 12mo. 5s. cl. Cumming's (Dr.) *God in History*, 9th edit. 12mo. 2s. 6d. cl. Whitelocke's *Journal of Swedish Embassy in 1653-4*, new ed. 24s. Wilson's (W.) *Bryologia Britannica*, 3rd edit. 8vo. 42s. cl. Wright's (T.) *Early Christianity in Arabia*, 8vo. 6s. cl.

CORRECTION OF THE COMPASS IN IRON SHIPS.

AN accidental delay in the receipt of authentic information, combined with other circumstances, has made my reply to Dr. Scoresby's papers in the *Athenæum* of the 9th of December and the 16th of December much later than I could have wished. I propose in this paper to follow the same order as in my communication to the *Athenæum* of the 28th

of October, and shall endeavour to arrange, under the same heads, the whole of the remarks which I have now to make on the general subject, as well as the special notices which Dr. Scoresby's papers seem to require.

I. I deem it not unimportant again to call attention to my Memoir published sixteen years ago. The circumstance that the possible failings in the practical application of my theory of correction were indicated by me in the first paper which I published on the subject is, I should conceive, a sufficient guarantee of my willingness to contemplate the question on more sides than one, without what Dr. Scoresby denominates (with greater force of expression than I had expected to find in his writings) "preconceptions of theory or the prejudicing influence of particular personal views." The circumstance that these possibilities of failure were published in such a work as the *Philosophical Transactions* almost necessarily argues that they must have undergone some consideration from other persons as well as from myself. Remarking then that, to the best of my knowledge, no cause of failure has since been hinted at by Dr. Scoresby or others which was not clearly pointed out there (however much we may differ in the relative degree of importance which we attach to these causes of possible failure), I shall advert now to a matter mentioned in my paper of 1839,—to which I shall have occasion to refer in a subsequent part of this communication, but which was not required in my article in the *Athenæum* of the 28th of October.

The basis of any satisfactory theory on the disturbing forces of iron ships must be a careful investigation of the effects of transient induced magnetism. Such an investigation occupies a large part of my Memoir of 1839. I have there shown that the effect of the transient induced magnetism on the compass may be represented in all cases by two terms, of which one is exactly similar to that resulting from the disturbance produced by permanent magnetism, and the other is exactly similar to that produced by a mass of soft iron at the same level as the compass; but that the former of these two terms becomes zero when the whole mass, whose induced magnetism is investigated, is at the same level as the compass. In an algebraical form, the disturbing force will be represented by a $\sin A + b \sin 2A$ (A being the azimuth of the ship's head), where a vanishes when the general mass is at the same level as the compass. The term $a \sin A$ is of the same force as that produced by a permanent magnet, and therefore cannot be separated, in the observations for correcting the compass, from the effects of sub-permanent magnetism; the term $b \sin 2A$ is neutralized by the soft iron which correctors are in the habit of applying. But though the term $a \sin A$ cannot be distinguished, at the port where the correction is effected, or at any other place separately considered, from the effect of a permanent magnet, yet on changing the locality its co-efficient changes its magnitude and even its sign. It is desirable, therefore, to have means of ascertaining its magnitude; and I gave full instructions for doing this, founded on observations to be made in different magnetic latitudes. But as, in the first instance, the correction of the compass must be effected in a British port, it was desirable to form an *a priori* conjecture on the magnitude of the co-efficient a . I conjectured that it would be so small that it might be neglected (the curious reader may find my reasons in the *Philosophical Transactions*, 1839); but I continued to indicate it as a matter for examination.

I am now inclined to think that my estimate of the possible magnitude of this term was too low. There is abundant evidence that in many cases it is practically insensible; but there is also evidence which tends to show that in other cases it is large. I shall advert to these instances in a subsequent part of this paper.

II. I trust that nothing in my paper of the 28th of October can be interpreted as implying that our obligations to Dr. Scoresby, for his earlier as well as for his later experimental investigations, are not of the gravest kind. But, being generally acquainted with Dr. Scoresby's experiments on iron

bars, I was totally unprepared by them for the intensity of magnetism which I found in wrought-iron plates as they came to my hands. In regard to my preference of the term "sub-permanent" to "retentive," I can only refer to the reasons, grammatical and physical, which I explained in my paper of the 28th of October, and which appear to me to be untouched by Dr. Scoresby's subsequent remarks.

I take this opportunity of acknowledging that a conjectural suggestion of mine, on the possible connexion between the polar direction of the magnetism of iron-plates, and the direction in which they were rolled, appears to have been completely negated by later experiments of Dr. Scoresby's.

III. In regard to the connexion between Dr. Scoresby's late experiments, and the action of the forces to which iron ships are practically subject, the matter has been left in some obscurity by the remarks in Dr. Scoresby's last paper; and some care on my part will be necessary to place it in what I consider the proper light. That I may treat it in an orderly way, I will advert separately to the three actions which (I believe in agreement with Dr. Scoresby) I consider as the only ones to which an iron ship is subject. They are:—

1. The tremors produced by the steam-engines, paddles and screws, in steam-ships.
2. The strains of extension.
3. The impulses of the sea-waves.

1. If the reader will refer to the *Athenæum* of October 28, 1854, page 1304, col. 2, l. 46, he will see that I have recognized the tremor produced by engine power as very likely to produce magnetic disturbance. In screw-steamers it will probably be worse than in other vessels, because the parts affected by the tremor are so near to the steering-compass.

2. In the same place, line 42, I have alluded to the possible importance of the strains of extension. In passing over a steep wave, every iron plank in a ship's upper works is subject to a great extensile force. But I am not aware that any experiments have been published which bear upon the magnetic effects of this force. I, for one, should be grateful to Dr. Scoresby if he could be prevailed on to institute experiments upon this matter.

3. My remarks upon the inability of the impulses of the sea-waves to produce the magnetic effects which Dr. Scoresby illustrated by blows with a hammer or mallet, have been so completely misunderstood by Dr. Scoresby as to have led me to imagine that I must have expressed myself in a way at least fairly liable to misinterpretation. On reference to my paper in the *Athenæum*, page 1304, col. 3, l. 33, &c., I see no such faulty expression. Dr. Scoresby has said that I "understate, and that in a measure that surprises one, the effective violence of the waves." And he conducts his argument as if everything depended on the violence of the waves; and as if I disputed the possibility of their producing a magnetic effect by denying the violence of the waves. I have done no such thing. I have conceded the existence of heavy water-pressure, and will with pleasure multiply it tenfold, if any point of explanation can be so gained. But I cannot imagine how it has happened that Dr. Scoresby, who has cited my very words, has not perceived that my argument is, that the action of this water-pressure is not effective because a condition is omitted which I regard as "essential, that the blow be of the nature of impact, occupying a very small fraction of a second of time." This condition assuredly does not hold in the impulses of the sea.

As the matter has presented itself to Dr. Scoresby's mind with some degree of obscurity, I will go a little further into it. I will say, then, that I do not think it possible for any one to read Dr. Scoresby's original experiments without deriving from them the impression, that the increased susceptibility of soft iron to magnetic change depends entirely upon what I may call the *jar* or *molecular tremor* produced by blows. It did not appear necessary that the momentum impressed should be great; but it did appear necessary that the momentum should be destroyed by the resistance of

the iron in a very minute time; that the blow should be not a *soft* blow, but a *sharp* one. What limits may be assigned to the duration of time, it may be difficult to say:—the only numerical computation which I am able to give is based upon one of Dr. Scoresby's early experiments. Dr. Scoresby found that when a certain iron bar was dropped endways from the height of three feet upon a stone floor, powerful magnetism was developed in it:—when the same bar was dropped from the same height upon a floor covered with carpet, the magnetism was scarcely sensible. When the bar fell on the stone, the momentum was destroyed while the bar moved through a small space, say $\frac{1}{1000}$ of an inch. When the bar fell on the carpet, the momentum was destroyed while the bar moved through the space represented by the yielding of the carpet, say $\frac{1}{4}$ of an inch. In the former case, the momentum of the blow was destroyed in about $\frac{1}{80000}$ of a second of time, and much magnetism was produced. In the latter case, the momentum was destroyed in about $\frac{1}{300}$ of a second of time, and very little magnetism was produced. Without restricting ourselves very closely to the numbers thus found, we may perhaps conclude that there is little probability of a change in the magnetic state if the destruction of the momentum occupies more than $\frac{1}{10}$ of a second of time.

It is not necessary to employ many words in proving that such a condition cannot be secured for the impulse of water. It is impossible so to concentrate its action on a limited surface, and so to unite the momenta of all its particles into one momentum, that its force will resemble that produced by the impact of a piece of metal. However great may be the pressure to which it rises in a second or two, it will be at first a soft-spreading, washy impulse. I do not conceive that the shock of very many tons of water can produce the same magnetic effect on a plate of iron as a rap with a 2-lb. iron hammer.

Dr. Scoresby alludes to waves rolling with a velocity of 20 or 30 miles an hour. Perhaps it may not be amiss to inform some of your readers that this does not necessarily imply any great velocity of the water itself (whose motion may be exceedingly small),—it merely means that if a ship whose length is 180 feet is lying across the ridge of the wave, the elevation of the ship's head will follow that of her stern by four seconds of time. Dr. Scoresby also remarks that naval readers, forgetting probably the "amenities" to which he had previously alluded, will "smile" at the mechanical limitation of the action of waves, &c. Yet landmen are sometimes not without experience of these matters. I have myself more than once passed through gales of several days' duration, as heavy as usually prevail near our coasts (I speak after reference to registered pressures of the wind), on one occasion with injury to the ship's bulwarks,—and I have been able to contemplate the general action of the seas; and my persuasion is, that those impulses and motions which are, as regards the frame of a ship, so sudden and so straining, are, nevertheless, as regards the individual plates of iron composing the ship, so very slow in proportion to the rapidity of action required for magnetic change, that a very small magnetic effect will be produced. I can well imagine that a broken sea concentrated under the hollow bows of the Great Britain would produce there a very great rending force,—and I think that in that case there would be an unusual probability of magnetic disturbance,—but even there I am by no means certain that such an effect would follow.

To recapitulate, then, my opinion on the connexion between the results of experiment and the changes to be anticipated in iron ships: I think the tremulous action of steam-engines likely to produce a sensible effect, especially in screw steamers,—but in any case I should expect it to be slow. I attach little importance to the direct action of the waves. I am very desirous of knowing the effect (in experiment) of forces of extension, which I think not unlikely to produce (in practice) the greatest effect of all.

I have not specially alluded to the flexure of the iron plates, because I suppose it practically to have

no application, and because Dr. Scoresby apparently attaches no importance to it.

IV. Far more important, however, to the general reader, is the question as to the changes which really have been observed. And here I must say that, while some broad facts of change are well established, the imperfection and want of precision in the evidence of specialities is such as to throw great obscurity over the causes and laws of the whole. I will first advert to the asserted sudden changes of large amount,—and I will then state the evidence for other changes, as far as is known to me.

I must commence with objecting to such reasoning as that which Dr. Scoresby has founded on the comparison of the magnetic state of the Elizabeth Harrison, as on the stocks, with that of the Imperator, as afloat and fitted for sea. From the difference between the magnetic state of one ship before she is launched, and that of another after she is launched, Dr. Scoresby infers the effect of launching and fitting-up. Such an argument would not be admissible in any other science, and appears to be specially unsuited to this, where the capricious differences in the state of different ships are matters of daily observation. It is greatly to be hoped that Dr. Scoresby may have had an opportunity of examining the Elizabeth Harrison afloat.

On coming to the alleged testimony to sudden changes in the magnetism of finished ships, not referable to the class of changes in rounding headlands (to which Dr. Scoresby has elsewhere called attention), I am struck with the extreme meagreness of the evidence. The whole that could be produced by an active inquirer whose thoughts have long been turned in that direction is the following:—

1. The Ripon, in passing Cape Finisterre, underwent a sudden change in her magnetism, in consequence of which she made Ushant on the port bow instead of the starboard bow. Dr. Scoresby appears to regard this as an important instance: it is twice cited, and once with a note of admiration. And what does the reader suppose to be the amount of change? In a run of between 300 and 400 miles, the vessel was 15 miles out of her course. That is, the change in the compass was between two and three degrees. No one, surely, can compare this with the alleged change in the Tayleur. In all probability it was one of the "headland" changes; the result, doubtless, of a change (of slow growth I imagine,) which made the correction faulty, with different faults on different courses; and therefore not to be passed over as an insignificant matter; but still having no bearing whatever on the asserted change in the Tayleur.

2. The Ottawa was struck by a sea which caused a "remarkable change" in her compass. There is mention of a "previous description" of a change amounting to two points. I cannot infer with certainty from Dr. Scoresby's phraseology whether these refer to the same change or not. If they refer to different changes, they imply a habit of change in that ship which certainly it does not share with iron ships in general, and which would seem to imply that the change is due to some other cause. If they refer to the same change, the incident deserves the most careful inquiry, for it is the only one yet adduced which appears to bear on the case of the Tayleur.

Thus ends the evidence on sudden changes collected by Dr. Scoresby. For myself, I may state that I have made inquiries tending to elicit the facts of this class that might be detected in the examination of many hundred iron ships, which probably have made several thousand voyages. In one solitary instance I have mention of change. I am informed that the Pampero, when new, having made a short experimental trip up and down the Mersey, her compasses were disturbed six degrees. The only objection to this instance is, that if it prove anything it seems to prove too much. Even Dr. Scoresby, I believe, has not suspected that a finished ship would have her magnetism changed to this extent by a quiet run of so little length in perfectly smooth water.

The impression which these instances have left on my mind is nearly as before: that nothing

short of the most complete and irresistible evidence can establish such a change as that which has been asserted in the case of the *Tayleur*.

I shall now give a report on some of the information applying to slower changes, which I have received from persons engaged in the correction of the compasses in iron ships. It has been given by the heads of two firms whom I shall denominate A. and B. I regret much that I do not feel myself at liberty, in a discussion undertaken by myself on a matter of public interest, to publish the names of these parties. I shall content myself with saying that each has corrected several hundred ships,—that I have had many years' distant acquaintance with both,—that I have remarked the orderly and business-like way in which the observations of A. are drawn up,—that I have long known the skill and intelligence of B,—and that I present these reports to the public, on my judgment, as worthy of their confidence. I shall give the words or the substance of the answers, as appears best.

Question 1 related to the number of ships.—I shall only state here, that about one iron ship in seven is a sailing-ship; the others are steam-ships.

In reply to Question 2, on the state of the compasses in ships that have not been re-swung,—

A. When ships have not been re-swung, it is generally presumed that they do not need it. In a few cases, commanders have known the amount of any trifling alteration of their errors, and have allowed for it. But in nine cases out of ten, although vessels have been adjusted with magnets two, three, and four years, the captains have assured me that their compasses were quite correct. All the large screw-steamers belonging to the General Screw Steam Shipping Company, which have made voyages to Australia, and home round Cape Horn, and to India and back, had their compasses adjusted when first built, and have not been re-swung since because they have not required it. It is believed that the reason for our not being called on to re-swing others is because they have not required it.

B. If any change takes place of a serious nature, I am always informed of it. When no application is made, the correction is to be considered satisfactory; and if time were given I could produce scores of testimonials for the accuracy and permanency of the adjustment.

In reply to Question 3, on the state of the compasses in vessels which have been re-swung,—

A. I have re-swung two steamers and three sailing-vessels. The Sydney and Australian have been re-swung after every voyage, there having been some slight alterations on board. [The errors, nevertheless, are very small.] The sailing-vessels have been re-swung from the same cause. The Typhoon reports that the deviations given, both on standard and adjusted compasses, were of no use after 12° south,—the greatest disturbance taking place off the Cape of Good Hope, and the errors increasing to the eastward on the courses. She is to be re-swung immediately. [She has been re-swung, and the tables of errors have been sent to me; the largest error of the compass as formerly corrected is now 4°. This is a very instructive instance.]

B. I have re-swung not six sailing-ships, and few paddle-wheel steamers, the adjustment remaining very permanent, and the error in many instances not amounting to half-a-point,—similar, in fact, to those reported in the majority of instances of wood-built ships. But with screw-steamers I have found an error of 19° in a voyage to the Mediterranean and back. After re-adjustment, they have become perfect, and have remained so for a voyage or two, and another change has taken place, but not to so great an extent; as in all iron ships the adjustment becomes more perfect as the ship becomes older.

In answer to Questions 4 and 5, relating to the record of the errors found on re-swinging,—

A. I always keep copies of the Deviation Papers. [Specimens were sent.] But as we have had no occasion to re-swing vessels, except where the iron had been altered, they convey no decisive information. [The largest error in one appears to be

about 8°, in a second about 6°, and in a third scarcely sensible.]

B. I do not usually keep notes of the errors found on re-swinging, as the errors are rarely large; and the solitary instances are well remembered. The average is under 5°. The greatest that I have known is 19°.

In answer to Question 6, relating to the time in which the errors had grown up,—

A. I can give no information.

B. I have seen a change to the amount of 6° produced in a short experimental trip (the *Pampero*, mentioned above), and in another vessel (the *Nubia*) built by the same builder in the same position, no change whatever occurred, even after making two voyages to Alexandria. [The report of the Captain was inclosed to me; it is perfectly satisfactory.]

In answer to Question 7, relating to the class of vessels in which the principal changes are found,—

A. We have not remarked any general difference.

B. The greatest changes are in screw-steamers.

In answer to Question 8, Have any of the ships been re-swung more than once?

A. Very few, except where alterations have been made, as by mounting new screws or new ironwork near the compasses. The greatest errors have been from 5° to 8°. [Papers were sent to me.]

B. In many instances, ships have been re-swung without discovering any change; and the faults alleged must have arisen from imperfect steerage, bad navigation, or currents, for the very same vessels, having different commanders, have been found by them to be faultless. One instance I will give:—A screw-steamer, from the Mediterranean for Liverpool, found herself in the Bristol Channel. On her arrival here, great complaint was made of the compasses. I re-swung the ship in the presence of a new master, whom I requested to take the bearings with me, in order that he and the Company might be convinced of the accuracy or inaccuracy of the compasses. They were found perfect, and have remained so ever since.

Question 9 related to the number of long-voyage ships.—They appear to be about one-sixth of the whole.

Question 10, Can you give any particulars on the changes of their compasses?

A. In some instances both adjusted and unadjusted compasses were useless in southern latitudes, it being necessary to take azimuths to steer the ships with any degree of accuracy; but on returning north, the compasses have returned to what they were. [Allusion has already been made to the Typhoon.] In other instances they are quite correct throughout. The captain of the *Guanabara*, after stating that he had made Madeira, St. Vincent, Bahia and Rio, in the night, without an error of a mile, says: "After crossing the Equator, I paid strict attention to the compasses, and found not the slightest deviation on them. On my arrival at Rio, I swung the steamer, and found the deviation to be the same as when the compasses were adjusted in the East India Docks." The captain of the *Argo* says: "I have found the compasses perfectly true, the same in the southern as in the northern hemisphere." The captain of the *Lady Jocelyn*: "The greatest deviation was after rounding the Cape; it amounted to from half-a-point to a point:—the error was retained on that course ever since."

B. The reports on their changes are conflicting. In some instances, the compasses remained perfect even in passing round Cape Horn and the Cape of Good Hope. In others, statements are made that the errors are enormous (which I have likewise heard of in wood-built ships). I do believe there are instances where changes have taken place, but I do not doubt that there has been gross exaggeration. It is very remarkable that nearly all the iron sailing-ships that I have adjusted have never been re-adjusted.

Question 11, Have you ever known any instances of sudden change occurring in one or two days?

A. Never. Some years ago, a vessel returned with the poles of her compass needles reversed

after a thunder-storm. [This, it is evident, has no relation to the correction of the compass.] The shortest period that we have known any change to occur in is from two to three years, and then the error never exceeded a few degrees.

B. The *Pampero* above mentioned is the only one that I have known. I believe that when changes do occur they come on very slowly.

Question 12 related to the construction of the correcting magnets.—The answers prove that great care is bestowed upon them.

Question 13 related to the measures taken for preserving and registering the powers of the magnets. The following remark occurs incidentally:—

B. In most cases, on re-swinging, the magnets require placing at a greater distance from the compass.

Question 14. Can you give any other information?

A. Reports from the southern-going vessels are not so generally satisfactory as from ships employed in northern voyages; and where a standard compass can be erected in a neutral part of the ship or near it, it ought always to be done. We find greater difficulty in making the adjustments of iron-beam vessels than where the beams are of wood. In the former case, we have found errors existing on the intermediate points, in magnitude from 7° to 15°, although the cardinal points have been correct. In vessels with wooden beams, the errors are more uniform, and the compasses when adjusted have no errors left on any point exceeding 3°. In some cases where compasses have been reported inefficient, the mischief has arisen from the compasses themselves being out of repair, few owners or captains being aware of the destructive action of the screw.

B. In a report that I sent to you about twelve months ago, I alluded to a peculiarity incidental to screws. The vibration, unless counteracted, has a tendency to produce irregular oscillation.—I intend keeping a register of the directions in which ships are built, of their builders, and of other peculiarities in their construction. I am convinced that a great deal depends upon the peculiarity of building.

Thus terminates the evidence of my correspondents; and I am confident that few persons who read it carefully will share in the alarmist doctrines of Dr. Scoresby. At the same time, there are matters in it which require grave consideration.

One general law seems to apply to ships going into the southern hemisphere, that, on returning to England, their compasses are (with very trifling errors) as correct as when they left England. But the state of their compasses in the southern hemisphere varies greatly. Some are perfectly correct, others are very erroneous. This is evident from the instances given above, as well as from others cited by Dr. Scoresby (some of which were previously known to me).

I do not imagine that in any of these cases the sub-permanent magnetism has undergone any particular change. I think it far more probable that the error arises from transient induced magnetism, acting in the manner described in Section I. of this paper. Though the original theory was correct, the application of it has been incorrect, from throwing the correction exclusively on magnets, and not introducing also the action of a mass of soft iron below the level of the compass. The practical method of curing this fault, as far as it can be done, shall be considered in the next section.

V. In my communication of October 28, I adverted to a plan then occupying my thoughts, for giving the means of changing the power of the correcting magnets. Since constructing my model, I have learnt that an artist, favourably known to me in reference to the correction of ships' compasses, had devised for the very same purpose a plan somewhat different from my own in form, though essentially equivalent in effect. As I can have no doubt of the superiority which this gentleman's practical experience must give to his form of the apparatus, and presume that the essential points of movement and registration are secured, I at once withdraw my own. But I will describe the general

features of both, and the way in which I should propose to use either.

The nature of the construction is this:—It enables the captain to alter the positions of the magnets (so as to alter their powers), and to register their places. And I propose to use this in conjunction with an elevated standard compass. This elevated compass is not to be used for ordinary reference (as I understand Dr. Scoresby to propose), but on rare occasions and at very favourable times, for the adjustment of the steering compass. It may, therefore, be as high as the mizen top-gallant mast. Steering by signal for a short time in the cardinal directions as indicated by this upper compass, the captain below will be able so to shift the magnets as to make the steering compass sensibly correct, and so to record their position as to be able to bring to England a true register of the state of the ship's magnetism at that time.

Suppose now that it is found, when a ship goes far south, that one position of the magnets is necessary, —and that when she returns to England another is required, nearly the same as at starting. The intelligent artist will be able to conjecture with great accuracy the position in which the magnets ought to be placed, in order to produce pure counteraction of the sub-permanent magnetism,—the same position, namely, as that which without other aid would produce perfect correction at the magnetic equator. Placing them in this position, all remaining errors ought then to be corrected by masses of soft iron, in the way which I have explained in the *Phil. Trans.*, 1839,—and then I expect that the correction would be found sensibly perfect in all latitudes, north and south. The freedom of adjustment of the magnets ought, however, still to be left.

In reference to the general subject, I have only further to remark that, while I trust that the results of careful observations on ships' compasses will from time to time be given to the public, I trust also that they will be subjected to such discussion (under the direction of competent mathematicians) as will serve to elicit from them the fundamental physical facts. The exhibition of columns of figures, such as those in Capt. Johnson's book, to which I alluded in my paper of October 28, is not simply useless: it is mischievous. It seems to show complexity and confusion, and tends to disseminate alarm; whereas, if properly treated, the same numbers would show simplicity and order, and would give the firmest ground for perfect confidence.

I must not omit here to acknowledge a courteous letter by Capt. FitzRoy in the *Athenæum* of Nov. 11. I believe that all the points to which it alludes have received notice in the remarks above, with the exception of one on the possible effect of the proximity of a needle-pole to the magnets, produced by the heeling of the ship. This effect is not necessarily injurious. The action of the magnets in directing the needle is a composite action,—the magnets act upon both poles of the needle, and the two effects (as directing the needle) are added together,—and the effect of a little inclination of the needle is, that the action on one pole is increased, and the action on the other pole is diminished; and the sum, or directive force, is nearly unaltered.

I have now gone so fully into this subject, that it is not probable that I can have anything to add of material interest to the public; and I now, therefore, terminate my part in this discussion.

G. B. AIRY.

Royal Observatory, Greenwich, Jan. 29.

OUR WEEKLY GOSSIP.

A very remarkable calculating machine has lately arrived in London, which not only calculates series with four differences up to fifteen ciphers, but at the same time prints the results on tables up to eight ciphers. The machine has been constructed by M. Scheutz, of Stockholm, who has devoted eighteen years to the undertaking. It has received the approbation of the Swedish Academy of Sciences, who, in a report on its performance, say:—"This machine can produce a more complete collection of logarithms than any at present exist-

ing; the completeness, exactitude, and cheapness of which are guarantees for the demand of these tables over all others of the same kind calculated and made in the old way."—A Committee has been appointed by the Council of the Royal Society to examine the machine and report on its powers and performances.

Mr. Howitt writes again on the deeply-interesting subject of our copyright relations with Australia.—

London, Jan. 29.

It would be a very false security into which authors and publishers here would be lulled, if they received the impression which Mr. Robertson's letter in the *Athenæum* of Saturday last is calculated to convey. Mr. Robertson informs us quite correctly of certain correspondence between the English Custom House and that of Sydney, which took place at the commencement of last year; and assures us, on the faith of this, that "it will be seen that, in New South Wales, the Imperial Copyright Law will in future be strictly enforced." I may inform Mr. Robertson that, in August last, I paid a visit to Sydney, and that the law was then by no means strictly enforced there. Whatever may be done as it regards direct mercantile consignments of books, I will not undertake to say,—but while all passengers are allowed to come and go without the sight of a Custom-House officer, books can be introduced to any extent. And I can assure him that no such inspection did take place; and that, moreover, there were plenty of such reprints for sale at Sydney. Nay, were it necessary as a proof of the fact, I would undertake to introduce any quantity of such reprints in the most direct and open manner, into any of the ports of those colonies. If it depended on the London Custom House, the matter would soon be settled one way or other,—for here, as I have recently had occasion to observe, the officers discharge their duty in the most strict and laudable manner. Every package of passengers' luggage is opened; the title pages of all books are carefully examined, and all foreign piracies of English books inexorably confiscated. But I will venture to say, with Mr. Pecksniff, as it regards the colonies, that "if England expects every man to do his duty in this case, England is a most sanguine country, and will undoubtedly be deceived." Mr. Robertson tells us that a leading bookseller of Melbourne replied to the leading newspaper, advocating the rights of English publishers,—and in his reply observed, that "it was useless, and worse than useless, to recommend the breaking of the law." True; and two most able and pertinent letters the highly respectable bookseller in question inserted in the *Argus* in defence of the law. But what would Mr. Robertson say, if I were to show him that this very bookseller, in common with his brother booksellers, was himself at the very time breaking the law which he defended, by the sale of such reprints? Yet such was the fact. If then the very advocates of the law daily infringe it,—if the very champion of it against the newspaper press was, at the identical moment of his championship, selling such reprints,—how can we expect the Custom-House officers to be more consistent or rigorous? The officers, in common with their fellow colonists, feel the immense importance of the free influx of cheap books to their working population. The booksellers feel it too, and Mr. Robertson touches the point of the pressure on the colonial bookseller when he says,—"How can he sell his English copyright stock in face of these inferior but cheaper American piracies?" The truer shape of the question, however, is,—How can the booksellers sell very cheap books against very dear ones? There is a large, a growing, a restless and independent population in Victoria, who will read, and who will have their reading cheap; therefore, the bulk of the books they get are the cheap issues, both English and the foreign reprints of English. To them it is a matter of the most perfect indifference which they are. All the cheap libraries and cheap editions of books printed in England are bought; they are in every one's hands; they constitute the mass and substance of the circulating libraries both in town and at the Diggings. They get English editions as far as they are cheap, but when the books are dear in England, they buy the American piracies of them. They will have them, and if one bookseller declines to sell them, he sacrifices his business, for they become the customers of others who will. Believe me, the Victorians will seriously and efficiently exclude American reprints when they willingly admit ticket-of-leave convicts, which the last mail assures us, rather than consent to, they will throw off their allegiance to this country. On my voyage home, I had on board an American piracy of a popular work in six volumes which had not only been in and out of Melbourne, but had, during the last five years, travelled with its possessor through half of our colonies in both hemispheres, but would undoubtedly be arrested in its tour by the officers at the London Custom House. Mr. Robertson's concluding proposition would, however, imply, that he had himself no faith in the strict enforcement of the law in Australia, if, as he a second time congratulates himself—"the law will be strictly enforced," the suggestion is unnecessary. But, in my opinion, the organization of an Association by British Publishers, to protect and enforce their rights there, which he recommends, is a suggestion worthy of all attention, for it would bring the question to a crisis, and would, I am persuaded, soon demonstrate that an international Copyright Act with the United States is the only remedy and the only means of furnishing legally and uprightly cheap editions of all popular English works to our colonies. Yours, &c.

WILLIAM HOWITT.

The family of Marshal St.-Arnaud is about to publish a volume of his private letters. This collection, certain to be interesting, apart from its literary merits, will commence, says a corre-

spondent of the *Daily News*, with La Vendée, and terminate with the war in the Crimea.

The Marylebone Free Library has issued a Report, from which we glean that the library contains about 4,000 volumes,—that the number of visitors last year was 33,466, and the number of books issued—besides reviews, magazines, and serials—was 34,517. Mr. Dickens has had the largest class of readers, Scott the second, and Mr. Lever the third. It must be stated, however, that the library is very imperfect; and that many writers are not read because their books are not to be found on the shelves. The readers of Marylebone, unlike those of Manchester, chiefly take to the current light literature. Mr. Dickens finds 2,700 readers—Milton only 96. 'Valentine Vox' has double the number of readers of Shakspeare. Mr. Lever has more readers in Marylebone than Shakspeare, Milton, Byron, Goldsmith, Cervantes, Swift, Bacon, and Humboldt! More than all these, together with Hood, Æsop, Lamartine, and Mr. Layard! Such a report is not very encouraging. The great thing, however, is to encourage reading habits:—healthier tastes will come. When a man begins to read, he starts with a newspaper, goes from that to the current literature which most resembles newspaper reading, and arrives at more solid intellectual fare after a period of probation.

An Illustrated Catalogue of the works of Art in the late Mr. Bernal's collection—about to be dispersed by the auctioneer—has been issued to the public, with a brief Preface, by way of testimonial, from Mr. Planché. The collection is well known, and is of great rarity and interest. It contains specimens of Art-industry from the Byzantine period to that of Louis the Sixteenth, chiefly illustrative of costumes; fine gems in the furniture of taste, and *bijouterie* of all descriptions.

We understand it has been determined by the United States Government to send an Expedition in the ensuing summer to search for Lieut. Kane, who, it will be remembered, went out to explore the seas and lands north of Baffin's Bay, and of whom no tidings have been received bearing a later date than the summer of 1853.

Mr. Letts has sent us a new copy of his Book Catalogue, with the lettering suggested in our former notice. It may still be doubted whether the front index form is not the better one:—but nothing interferes to prevent each buyer making his own index to the volume. Mr. Letts supplies an excellent form; the purchaser, according to the size of his library and the character of his collections, will determine for himself the distribution of letters. The man who collects Pope will require more pages of P than the man who collects Bibles,—and so throughout the alphabet. A blank catalogue, therefore, with margin for an index, seems to us the best form in which such catalogues can be prepared. Mr. Letts, however, can judge of this from his own experience.

Among the sales announced for next week, we notice a collection of engraved British and foreign portraits, consisting of sovereigns, princes, peers, knights and gentlemen, chancellors, judges and pleaders, military and naval commanders, ladies of distinction, physicians and medical practitioners, historians, poets and literary characters, actors, musicians and vocalists, remarkable persons; together with a curious collection relative to the history of aërostation from the earliest period, public amusements, angling, archery, armour, baptism, bridges, games of chance and skill, chivalry and knighthood, clocks and makers, coaches, costume, crosses, cries and noises, dancing and singing, exhibitions, fashion, fortune-telling, funeral rites, stained glass, idols, inns and taverns, lighthouses, magic, masquerade, and other subjects.

The collection of the First Emperor's works is proceeding vigorously. These works, it appears, are to include, not only Napoleon's own effusions, but also the documents drawn up by his ministers, under his direction. Thus, all the decrees, and many of the reports, produced during the first Empire, will be published in the forthcoming volumes. So many documents have already been copied for the printers (between three and four thousand) and so many are still expected, that it is

now believed twenty volumes will hardly contain them all. It is also said that this work will throw additional light upon many passages of the history of the Empire. The documents, it may be interesting to add, are copied by clerks,—the notes to them (which often occur) in Napoleon's handwriting, being interpolated in red ink. Many letters, &c. written by the Emperor are in a text hardly legible,—it is only with the greatest difficulty that the exact words are made out. No copy has yet found its way to the Government printing-office. The Commissioners wait, it is currently believed, for some expected documents of great interest, the place of which should be almost at the beginning of the work.

A printed letter has been sent to us, dated from Preston, and addressed to the Secretary of State for the Home Department. It calls upon that functionary to give "the warm co-operation of the Government" to "an official inquiry into the historical materials which exist in many depositories," such inquiry to be in aid, if we understand the proposal rightly, of "a special Society" to be instituted for the purpose of constructing "Catalogues of our historical elements." The proposal springs out of the feeling of a want, towards which we are pleased to see the attention of Government and literary men directed. We cannot add that we think the present letter contains sufficient evidence of the writer's acquaintance with the subject to make him a safe guide in such an extensive and important business. His suggestion would also have been more satisfactory if, at the same time that he directed Lord Palmerston's attention to our historical documents, he had not taken advantage of the opportunity to puff two books of his own;—one, which he terms "a great success," but which we do not remember to have ever seen, and the other, to which he is now soliciting subscribers in a high-flown prospectus, to which he draws the attention of Lord Palmerston.

The Society of Arts will shortly open their Seventh Annual Exhibition of Inventions. These small exhibitions, or collections rather, of the inventions of the past twelve months originated in a desire to make apparent the directions in which progress was taking place. Inventors and others had long felt the necessity of some museum to which they could refer when contemplating or requiring some improvement in mechanism, or some new article of manufacture. The Society of Arts here stepped in to fill the gap, till some department of the Government should be charged with the establishment of a Permanent Museum, similar in its aim to that attached to the United States Patent Office at Washington.

Some of the newest illustrations of advertisement, as applied to Art, are curious. Singers continue to acquaint the admiring world with their progress from Towcester towards Diss,—inform us how the vocalist who enchanted Kendal on Monday, is retained by the public of Staleybridge for Tuesday,—and advertise other such testimonials of "credit and renown." Actors, too, are beginning to use the columns of the *Times* to explain how *influenza* has seized them, and constrained them to throw up certain characters. Nor is this all; gentlemen who are desirous of marrying ladies "with a competence," older than themselves, avail themselves of the same medium to assure "the shrinking fair" that they "are admirable poets." In short, the "puff direct" is now assuming forms of increasing directness. If the *Packwoods* of our advertising trade keep their minstrels, as of old,—the amount of individual trumpeting vented by the A's, B's and C's of small art and small letters in recommendation of their wares, themselves and their desires, seems on the increase.

The following extract from the Washington correspondence of the *New York Herald* shows that the policy advocated in the *Athenæum* last week has been sustained by the Regents of the Smithsonian Institution, by the overwhelming majority of ten to three. It remains to be seen whether, in the face of this vote, Congress will insist upon the Committee of Inquiry.

"The Regents of the Smithsonian Institution met again to-day. The question before the Board was the adoption

of Mr. Meacham's resolutions, submitted at the last annual session. These resolutions say that the law of the Institution requires the formation of a library by an annual appropriation of valuable works upon all departments of knowledge; and that a committee of three be appointed to superintend the expenditures for that purpose. The resolutions were rejected by a vote of three for, and ten against them—thus sustaining the course of Prof. Henry. The Regents voting for the resolutions were Messrs. Douglas, Choate, Meacham; against them, Chief Justice Taney, Messrs. Pearce, Mason, English, Stuart, Hawley, Berrian, Rush, Bache and Totten.—Mr. Towers was absent. The subject was fully argued by Messrs. Meacham and Choate for the resolutions, and by Messrs. Mason, Pearce, and others, against them."

Among recent deaths are three of English writers—the Rev. Julius Hare, rector of Hurstmonceaux, Dr. Phillimore, and Prof. Jones, of Haileybury College. Mr. Hare was joint translator—with Bishop Thirlwall—of Niebuhr's 'History of Rome.' He also wrote a 'Life of John Sterling,' the supposed deficiencies of which brought down upon him the anger of Mr. Carlyle. His other writings were chiefly ecclesiastical.—Dr. Phillimore's death removes from amongst us a ripe scholar, and leaves vacant the Chair of Civil Law in the University of Oxford. The deceased was Chancellor of the Diocese of Oxford, a Deputy-Lieutenant of the County, and one of the Busby Trustees.—Prof. Jones was originally intended for the law; but his health was unequal to the demands of that career. He consequently went as a student to the University of Cambridge, and this change in his plan of life he always deemed fortunate; for it led him to employ himself in literary and philosophical pursuits, and connected him with many of the friends whom he most valued, and who continued on the most intimate terms with him during the whole of his life. Among these were Sir John Herschel, Sir Edward Ryan, Mr. Babbage, Dr. Peacock, and Dr. Whewell. After leaving the University he took holy orders, and was engaged in ministerial duties in various rural parishes in Kent and Sussex for several years, and during the longest period at Brasted, near Sevenoaks. In these situations, he was regarded with great affection for his kindness to his flock, and was also noted for his knowledge of agricultural matters;—a knowledge which was by no means without its bearing upon his speculations in political economy. On this subject he laboured for many years; and was led to large and novel views, which he formed the intention of developing and explaining in the subsequent years of his life. He proceeded with this design so far as to publish, in 1831, the first Part of his system—a volume known as "Jones on Rent," but of which the proper title is, 'An Essay on the Distribution of Wealth, and on the Sources of Taxation. Part I., Rent.' In this work he states, that Adam Smith and others having treated of the Production of wealth, he means to deal with its Distribution,—and he sketches with a bold and original hand a division of the kind of rents paid in different parts of the world, each kind belonging to a different social system. These kinds are the rent paid by serfs (as in Germany and Russia), by *métayers* (as in France), by ryots (as in Turkey, Persia and India), by cottiers (as in Ireland), and by farmers (as in England). These broad divisions have been to a certain extent rendered familiar in the literature of this subject by subsequent writers; but they were then quite new, and were made the ground of important propositions. This work and other smaller labours made Mr. Jones known as a political economist; and accordingly, in 1835, he was appointed Professor of Political Economy and History at Haileybury College, and the successor of Malthus. This appointment led to his delivering his views in the shape of lectures; and, combined with other circumstances, perhaps prevented his completing the work which he had begun. He did not publish any further portion of it in a substantive form, though he more than once furnished a compendious statement of some of his views in the form of a syllabus of his lectures. But he was soon afterwards removed from speculative to practical political economy, to the grief of those who having followed his earlier speculations, thought it important that his views on other subjects besides rent, no less novel and comprehensive than these, should be laid before the world; but, no doubt, to the great advantage of the public

service in the solution of a very difficult and alarming problem in the condition of England at that time. He was employed in constructing and in working the Tithe Commutation Bill.

We have to record the death of Baron George Spiller von Hauenschild (better known by his literary *nom de guerre* Max Waldau), one of the most promising and aspiring among the younger poets of Germany. Not quite thirty years old, he was snatched away, on the 20th of January, by typhus at his family estate Tschaidt, near Bauerwitz, in Upper Silesia. A warm and noble heart—a glowing imagination—an abundance of bold and original thought,—and a restless and energetic sympathy with the interests of progress and humanity, are laid low with this young poet. His works are not without their faults, but they are the faults of youth and genius which would, no doubt, have disappeared if fate had but allowed him to present his country with the productions of a more ripened age. His two novels 'Nach der Natur' (1850), and 'Aus der Junkerwelt' (1851), made a name for him; besides these, he leaves a canzone, 'O diese Zeit!' (1850), a poetical tale 'Cordula' (1851), and his last work 'Rahab, ein Frauen, bild aus der Bibel' (1854). His translation of Silvio Pellico's 'Francesca da Rimini' is also to be mentioned. In the last period of his life he was occupied with a novel, 'Aimery, der Jongleur,' a tale of the Troubadours.

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, will OPEN on MONDAY NEXT, and will continue open daily, from Ten till Five. Admission 1s. Catalogue 6d. GEORGE NICOL, Secretary.

The WINTER EXHIBITION of CABINET PICTURES, SKETCHES, and WATER-COLOUR DRAWINGS of the BRITISH SCHOOL, is NOW OPEN, at the GALLERY, 121, Pall Mall, Daily, from Ten in the Morning until Five.—Admission, One Shilling. Catalogue, 6d.

PHOTOGRAPHIC SOCIETY.—The SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

The ARCHITECTURAL EXHIBITION and COLLECTION of MANUFACTURES connected with ARCHITECTURE is NOW OPEN, from 9 till 4, at the Galleries of the Society of British Artists, Suffolk-street, Pall Mall East.—Admission, One Shilling; Catalogues, Sixpence.—And the EVENING (except on Saturdays) from 7 till 10. Admission, Sixpence.

WILL CLOSE February 24, and all objects exhibited must be removed on the 26th. JAS. FERGUSON, F.R.A.S. & Hon. JAS. EDMESTON, Jun. Secs.

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

CYCLORAMA, Albany Street.—NOW OPEN, with a Colossal Moving Diorama of the City and Pal of NAPLES, MOUNT VESUVIUS, and the POPE exhibiting the great Eruption of 79, and present state of the Excavated City. Painted by Mr. J. McNEVIN, from Sketches taken by himself in 1832. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1s.; Children and Schools, half-price.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—THE CAVALRY CHARGE at BALAKLAVA is now added to the DIORAMA illustrating EVENTS of the WAR. The Lecture by Mr. Stoeker, including Description and Diagrams of Bastions, Gabions, Fascines, &c. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

LOVE'S NEW ENTERTAINMENT.—Christmas Holidays.—Ventriloquism Extraordinary.—Upper Hall, Regent Gallery, 69, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday; Saturday, at 3.—Mr. LOVE, universally accepted as the first dramatic ventriloquist in Europe, will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called 'THE DIORAMA SEASON,' and other entertainments. Pianoforte, Miss Julia Warman.—Stalls, 3s.; Aven. 2s.; Gallery, 1s.—Tickets at Mitchell's Naval Library, 33, Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, 12, Market Street.

PATRON: H.R.H. PRINCE ALBERT. ROYAL POLYTECHNIC INSTITUTION.—Continued improvements, increased attractions, fresh decorations.—DRAMATIC READINGS by Miss GLYN, Thursday Evening, the 5th inst. at Eight o'clock, OTHELLO.—MONDAY EVENING, the 6th inst., LECTURE to the INDUSTRIAL CLASSES: Fourth Lecture of a Course on PHYSIOLOGY, as connected with Health, by Dr. CARPENTER, F.R.S., F.G.S. &c.—Subject: AIR and RESPIRATION.—IMPORTANT LECTURES: Wednesday, the 7th inst. at 8.—Mrs. FURLONG on "ORAL" INSTRUCTION.—On the NEW BANK NOTE, by Dr. BACHOFFER, giving such information as will enable the public to detect FORGED NOTES.—On the TELEPHONE CONCERT, by invisible performers on four of ELIARD'S HARPS by J. H. PEPPER, Esq., illustrating Professor WHEATSTONE'S Experiments on the TRANSMISSION OF SOUND.—ENTIRELY NEW and SPLENDID OPTICAL DIORAMA from the ARABIAN NIGHTS, of the VOYAGES of SINBAD the SAILOR, with beautiful PHANTASMA-GORIA EFFECTS, and appropriate Music arranged by Mr. WAUD.—VIEWS of the WAR.—PERKINS'S STEAM GUN, which now discharges 200 BALLS per MINUTE.

ROYAL PANOPTICON OF SCIENCE AND ART, Leicester Square. Novel attractions daily.—Aladdin and the Wonderful Lamp, the legend told by Mr. L. Buckingham, at 3.40, and 8.45; and Di-ramic Views of the War in the Crimea, at 2.30, and 7.55; Mondays, at 7.15, with accompaniments on the Organ.—Performances of Classical Music on the Grand Organ by Mr. W. S. Best, Organist to the Institution, at 4.25, and 9.30; Luminous Fountain, 100 feet high, 4.55, and 7.55; Heinke's Diving Apparatus and the Subaqueous Light in the Crystal Cistern, 2.40, and 7.—Cosmorama of St. Petersburg and Moscow, with portrait of Czar Nicholas.—Lectures on Electricity, by Dr. Noad, on Monday Evening, 7.45, by Mr. C. F. Partington, daily at 3.10, and 8.15, Monday excepted.—On the Resources of Modern Warfare, by Dr. Scofield, Wednesday Evening, 7.10.—Chemistry, by Mr. G. F. Ansell, Monday, Wednesday, Thursday, and Friday, at 1.30.—On Fluids and their undulations, by Mr. Birt, Tuesday and Saturday at 2.20.—Oceanic Discovery by Mr. Birt, Thursday at 7.10.—Franklin's Arctic Voyages, Tuesday and Friday at 7.10, by Mr. L. Buckingham.—General Demonstrations on Scientific and Mechanical Subjects at intervals daily, by Mr. C. F. Partington.—Doors open in the Morning, 12 to 5; Evening (Saturday excepted), 7 to 10. Admission, 18s; Schools and Children under Ten, half-price.

SCIENTIFIC

SOCIETIES.

SOCIETY OF ANTIQUARIES.—Jan. 25.—The Viscount Mahon, President, in the chair.—G. Roots, R. H. Major, and F. Bennoch, Esqs., were elected Fellows.—The Rev. T. Hugo exhibited a flint celt found in the Thames.—Mr. Wylie exhibited a drawing of the elevation of the Frauen Kirche, at Esslingen, in Suabia.—The Secretary communicated transcripts of several letters written by officers of the Roundhead Army after the death of Charles the First.—The Rev. H. Scarth furnished a transcript of the inscription found on Coombe Down, near Bath, which he assigned to the reign of M. Aurelius Antoninus; but which the Secretary observed plainly alluded to Caracalla, who bore those names, that by which he is commonly known being a *soubriquet* only.

BRITISH ARCHEOLOGICAL ASSOCIATION.—Jan. 24.—T. J. Pettigrew, Esq. V.P. in the chair.—The meetings for the season commenced this evening, when twelve new Associates were elected, and several presents to the Library received. Mr. Turner exhibited some antiquities discovered at Gloucester, and four bronze keys apparently Roman. Two of these have lozenge-shaped bows,—a fashion common in mediæval keys, but rarely observed in those of Roman origin. These specimens, and one with an annular bow, are piped keys; the other example is spiked. Mr. Turner also exhibited an American shoe of early manufacture, the sole and heel of which were formed of thin layers of leather sewed together with broad thongs. Mr. Brent exhibited an oak carving found last year in the Chequers Inn, Mercery Lane, Canterbury, where it is said Chaucer and his companions lodged when they wended their way—

The holy blisful martir for to seke.

Mr. Gunston exhibited a tile of red terra-cotta, bearing the impress of a sheep's foot, obtained in 1849 from one of the pillars of the Hypocaust of the Roman villa at Wheatley, in Oxfordshire.—Mr. Planché presented to the Association the Letters Patent of Henry, Duke of Exeter, granting the office of Constable of his castle of Quenehope to Thomas Clotton, dated at Tenbie, 12 April, 39 Hen. VI. (1461).—The seal attached is in beautiful condition, and a fine example, inclosed within a rush.—A paper by Mr. Geo. Hillier, accompanied by illustrated drawings, was read, being the 'Results obtained in Excavations made in August last on Brightstowe and Bowcome Downs, Isle of Wight.' Two urns, a Roman fibula in bronze enamelled, of the shape of a hare, a bronze buckle, and other antiquities, besides bones simply inhumed and also cremated, were therein discovered. The tumuli appeared to belong to the early Saxon period.—A curious paper by Mr. Syer Cuming, on 'Archeological Frauds,' was read, and detailed numerous instances of deception practised by dealers and excavators, particularly in Nicholas Lane, Trinity Street, Cannon Street, Wallbrook, &c. Many examples were laid upon the table of Italian forgeries professed to have been derived from these excavations. At the expense of much time and cost, some members of the Association had ascertained the source whence these forgeries and frauds have proceeded, and if persisted in their names will be made known. Mr. Cuming's paper was not confined to archeological frauds in the city

of London, but took an historical view of the subject as practised from the commencement of the sixteenth century.

NUMISMATIC.—Jan. 25.—C. Roach Smith, Esq. in the chair.—Mr. Evans exhibited a third brass coin of Constantine the Great, bearing a Cufic inscription, which has been stamped across the face of it.—Mr. Roach Smith exhibited a Denarius of Domitia, which is probably unique. The type is, on the reverse a temple, with no inscription.—Mr. J. G. Pfister read a paper on an unedited and unique silver coin (Denarius) of Odoacer, king of Italy, A.D. 476—493, which was struck at Ravenna. The coin was exhibited. At the conclusion of his paper, Mr. Pfister observed, that this remarkable coin of Odoacer may be properly regarded as the first in the series of Mediæval coins; Odoacer having put to death Orestes, and having taken the Emperor Romulus Augustus prisoner, really terminated the Empire of the West A.D. 476; and from this event the period usually called the Middle Ages properly begins.—Mr. Vaux read a paper, communicated by Dr. Bell, giving an interesting account of the discovery, near Leuggerich, of a considerable number of Roman gold and silver Imperial coins, together with some fibulæ, rings and armillæ, probably of early German workmanship.

INSTITUTION OF CIVIL ENGINEERS.—Jan. 30.—J. Simpson, Esq., President, in the chair.—Translations were read of letters received from M. Eugène Flachet, on the part of the Society of Civil Engineers, of Paris, and M. Molinos, a Member of that body, offering facilities to the Members of the Institution of Civil Engineers, of London, during the occurrence of the Universal Exhibition in Paris, in May next. It had been decided, that special and detailed descriptions of the articles exhibited and the results arrived at, by Members of various Committees, should be published. These Reports would be read and discussed at the Meetings of the Society, and the Members of the Institution of Civil Engineers were invited collectively and individually to attend and take part in the discussions, and to avail themselves of the facilities offered by the kindred Society in Paris.—'A Description of the Iron Roof, in one Span, over the Joint Railway Station, New Street, Birmingham,' by Mr. J. Phillips.

SOCIETY OF ARTS.—Jan. 31.—J. Scott Russell, Esq., F.R.S., V.P., in the chair.—The paper read was 'On the Chalk Strata considered as a Source for the Supply of Water to the Metropolis,' by Mr. S. C. Homersham. The author commenced by stating that in many districts of Great Britain where the soil rests upon clay, millstone grit, or other matter impermeable to water, it is usual to collect the water flowing off the ground after heavy rains in very large reservoirs to supply canals and towns. Such a reservoir exists in the Valley of the Brent, situated about 5½ miles in a north-westerly direction from Cumberland Gate, Hyde Park, and is used to stow the superabundant rain water flowing off an extensive district of the London Clay geological formation; the surface of which is principally covered with grass. On the other hand, where the soil rests upon chalk, as on the Chiltern ridge and the North Downs, the heaviest rain, instead of flowing off, sinks into the ground directly it falls, giving back little to support vegetation, as is evident when the luxuriant vegetation on the London clay is compared with the scanty vegetation on the chalk downs. The notoriously moist character of the air over a clay district, and the dry character of the air over a chalk district, were instanced as familiar proofs, that but little of the rain-fall was evaporated from the surface of a chalk country compared with a clay country. The author showed that, while on a clay district 2,000 yards in length of stream and river courses existed per square mile, to say nothing of great lengths of drains and ditches, on the chalk there was only 780 yards of streams and river courses, and no drains or ditches. The bridges crossing clay streams were shown from numerous examples to have from

five to ten times as much water-way as bridges crossing chalk streams, notwithstanding the clay bridges were frequently choked with water, while the chalk bridges were never nearly full. The author stated that the amount of water flowing down clay streams, fed by a large area of drainage ground, was larger in dry weather than from chalk stream with a similar area of drainage. As much as 200 square miles of chalk country lying altogether was pointed out to the north of London without a spring, stream, or river upon it. From these well-authenticated facts, it followed that the rain sank into the chalk, and flowed out through the interstices between the planes of stratification that lead direct to the sea. The water was traced between high and low tide, flowing into the sea through the beach where the chalk was exposed, as at Dover, Deal, Brighton, &c. The proposal of the author was, that before the water reached the sea it should be intercepted for the supply of the metropolis, for which it is well adapted from its even and agreeable temperature, its clearness, its aëration and freedom from organic matter. The only drawback to its quality in this respect consisted in the water holding in invisible solution about 17½ grains of chalk per gallon as bicarbonate of lime; this chalk, however, could be easily withdrawn from the water by a process invented by Dr. Clark, of Aberdeen, without injuring the other good qualities of the water. The author had lately constructed works that were now supplying the important parishes of Plumstead, Woolwich, and Charlton with water derived from the chalk strata after having the chalk taken out of it by Dr. Clark's process. The water is much liked by the consumer for all purposes, washing, bathing, and drinking. Practically, an inexhaustible supply of pure soft water is thus within reach of the metropolis.

INSTITUTE OF ACTUARIES.—Jan. 29.—E. J. Farren, Esq., V.P., in the chair.—E. Sang and J. S. Crocker were elected Fellows, and six candidates were elected Associates.—'On the Rate of Sickness and Mortality amongst the Members of Friendly Societies in France,' by S. Brown, Esq.

MEETINGS FOR THE ENSUING WEEK.

- MON. Royal Institution, 2.—General Monthly.
- TUES. Entomological, 8.
- Institution of Civil Engineers, 8.—'Observations on the Flow of Water through Pipes and Orifices,' by Mr. Leslie.
- Horticultural, 2.
- Royal Institution, 3.—'On Magnetism,' by Prof. Tyndall.
- WED. Society of Arts, 8.—'The Commercial Consideration of the Silk-Worm and its Products,' by Mr. Dickens.
- THURS. Royal Academy, 3.—'On Architecture,' by Prof. Cockerell.
- Society of Antiquaries, 8.
- Royal, 8.
- Royal Institution, 3.—'On English Literature,' by Mr. Donne.
- FRI. Philological, 8.
- Royal Institution, 8½.—'On Orangs and Chimpanzees,' by Prof. Owen.
- SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

Views of the Crystal Palace and Park at Sydenham from Drawings by Eminent Artists, and Photographs by P. H. Dela Motte. With a Title-page and Literary Notices by M. Digby Wyatt. First Series. Day & Son.

THIS handsome quarto, tastefully bound and copiously illustrated, forms an elegant drawing-room table book, that will help to recall pleasant days and hours spent beneath the crystal roof.

The lithographs, chiefly from the experienced hand of Mr. Carriek, are not highly finished, nor in any way remarkable. The letter-press consists of selections from the 'Guide Books' slightly expanded, and written with more ease, fluency and attention to style; but is too crowded with facts to allow much space for the display of literary talent. The pale buff and lilacs of the tinted plates are so feeble and conventional, that we think mere black and white would have been preferable, even at the risk of losing the contrast of warm and cold colour.

In Mr. Wyatt's introductory chapter we find some interesting remarks on the origin and prospects of the Crystal Palace. Hitherto, in England, the author says, the Fine Arts had been wooed only under their severest aspects. They had been made objects of study, trade and fashion;

but at Sydenham an attempt was made to exhibit them as sources of innocent and stimulating pleasure—to popularize them, trace their mutual relation, and to show the harmony that pervaded them all. From the days of Henry the Eighth the aristocracy had patronized Art; but during the present century the *bourgeoisie* have evinced a taste for the same pursuit:—and when the people become educated in Art by going to Sydenham; Mr. Wyatt thinks the true and noble will be patronized, and a genuine admiration for what is good extend. The present Exhibition has an ideal element which its prototype did not possess. Its predecessor dwelt only with the Present,—its descendant, while dealing with the philosophy of the Past, appeals also to the Future. The real germ of the Sydenham Exhibition is to be traced in the successful efforts made by the French Government to elevate the people even in their amusements: the most suggestive of these efforts was the Great Museum of Antiquities commenced by M. Le Noir, in the year 1790, in the deserted Convent of the Petits Augustins. Besides this, scarcely less remarkable were the museums of sculpture in the Louvre and Luxembourg, M. Sommerard's Mediæval Collection in the Hôtel de Clugny, the Jardin des Plantes, the Galleries of Versailles, and the Gardens of St. Cloud. In France the system is to lead, educate and direct public taste. We are proud, dogged, self-dependent. We have not yet learnt to see that the cost of such works is soon repaid by increased artistic skill and the advance of intelligence in design;—of mechanical contrivance and brute force we have enough, of taste and creativeness scarce a spark. In the words of Mr. Wyatt—

“The great end and aim of the Crystal Palace are to cultivate the imaginative faculty in the workman himself,—to cause its value to be appreciated by the class of employers,—and to make a recognition of it indispensable on the part of purchasers, and of all who, by their position or influence, may be able to direct the current of popular feeling. Now, for instance, that the workman has an opportunity of seeing how exquisitely conventional foliage was treated by the modeller and carver in the best days of Greek or Renaissance art, he will have no excuse for those heavy lines and coarse projections which, in modern cabinet-work, too frequently destroy the sense of surface, and convert into leading forms what should rightly be but subsidiary decorations:—the employer who exhibits in his shop goods characterized by such defects, will be quickly superseded in his calling by one more keenly alive to the advantages now offered to him;—the purchaser who transfers to his apartments objects so tastelessly decorated, will be laughed at by such of his friends as have noted for themselves how much more simple, and yet more beautiful, such ornamentation may be made;—and thus the tide will flow from class to class, till ultimately we may hope that, almost insensibly, a better and a clearer recognition of material beauty may extend throughout the country, elevating our manufactures to at least an equality in point of design with those of any other nation in Europe.”

We are glad to hear that the Directors of the Palace Company have traced a grand scheme of a wider and more perfect Art-Exhibition. Their present chambers are the mere store-rooms for future beauties. They recognize the importance of Numismatics, and desire especially fac-similes of the medals of Sicily and Magna Græcia. To these they would add a chronological series of antique bronzes, and copies of the finest vases of Nola and Etruria. They covet the ivories of the Eastern and Western Empires,—not to mention Mediæval Europe, and restorations of the tombs of Egypt, Greece, Etruria and Rome. Oriental, Mexican and Scandinavian antiquities are still unrepresented. There is a crying demand for specimens of Mogul architecture from Agra and Delhi, and examples of the magnificence of Arungzebe and his descendants. The ancient Britons are unrepresented either by arms or coins. They hope to possess a series of the richest stained glass windows throughout Europe,—mural paintings executed in fac-similes from the frescoes of the old masters,—monumental brasses,—niello and enamels,—precious metal work,—illustrations of the whole chronological sequence of ceramic industry, and of the glass manufactures of Venice and Bohemia, together with personal ornaments and relics of the ancients in historical and progressive order.

In the other departments the Directors plan equally grand improvements. Already Botany may be studied there,—not in the *hortus siccus*, but the living flower;—and the child may in an hour

realize all the long deductions of Geology. In Mechanics it is intended to exhibit a scientific epitome of the products which form the base of human industry, and of the machines and processes by which they are converted into fresh forms.

NEW PUBLICATIONS.

Ceiling of the Sistine Chapel. By Michael Angelo Buonarroti. (Coloured Lithography.) Winkelmann & Gruner. Colnaghi & Co.

THIS costly and admirable copy of one of the greatest works of human art is dedicated to Sir Charles Eastlake, and has been executed at the expense of Mr. Harford, of Blaise Castle, near Bristol, who, with his usual generosity, has announced his intention of assigning the profits arising from its sale to the Artists' General Benevolent Institution. The print is about three feet long, displays more careful colouring than fine drawing, but all the effects of composition, and even the sombre tone of the original, are conveyed with great fidelity. Produced by Herr Winkelmann, of Berlin, under the direction of Mr. Lewis Gruner, of London, from a painting made on the spot, it has received the warm admiration of Overbeck and Minardi, Gibson and Thierani, as well as of the leading artists of England. Titans reduced to puppets, Pre-Adamite patriarchs to tiny manikins, at first sight repress our admiration at the truth with which the sublimity of the original conception and the grandeur of its design have been given. One hundred and thirty feet are, it is true, reduced to three, and the vast cycles are crushed up into miniatures; but, in return, we have before us a bird's-eye view, and the whole ceiling is here brought into the focus of a glance.

The Sistine Ceiling forms in its section a flattened arch-plane: in the centre of which is depicted, in nine compartments, a series of Scriptural subjects, from the Creation of the World to the Resurrection of Man: great dramatic and statuesque groups, not subtle and graceful in composition, but startling, awful and colossal. We feel as we view them that Michael Angelo was pre-eminently the painter of the Old Testament, and Raphael of the New. The mind of the one, gloomy, stern and profound, has an appreciation for the majesty and power, the other for the love and mercy, of God. The one sees the thunders from Sinai,—the other the radiance of the Mount of the Transfiguration. The one, like St. Peter, is always snatching up the sword,—the other, like St. John, rests his head smilingly upon the Saviour's bosom. In considering the human form, Michael Angelo exaggerated matter, but tried in vain, like the Greek, to raise it to a level with spirit. His men have demoniac, eternal, and untiring strength; their bodies are transparent, and we see the working and antagonism of the muscles: they are always Titans; sometimes they are theatrical wrestlers, and occasionally they are only hired posture-makers. Form had for him attractions even superior to those of Expression, but his form was Gothic, and not Greek form. It is singular that Buonarroti, the noble's son, displays the coarse strength and brawny vigour of a robust labourer,—while Raphael, the son of the poor painter of Urbino, is always aristocratic in the faces of his figures, which move as gracefully and delicately as if they were Grecian statues quickened into life.

But to return to the Ceiling. At the springings of the vaults all round the chapel are introduced the majestic Prophets and Sibyls, typical of Redemption; and between these and the arches below are lunettes adorned with Holy Families and figures illustrative of the scriptural genealogy of Christ and the Virgin; and these compositions are bound together by a network of architectural ornament and allegorical imagery.

Over these creations did the stormy mind of Michael Angelo dwell, in the intervals of his rude conflicts with envious masters of the ceremonies and revengeful Popes, arrogant cardinals and contemptuous nobles,—of journeys to Florence and flights from Rome. We think of him with his contempt for *dilettanti*, his defiance of impatient pontiffs, and his proud assertion of the dignity and glory of Art. We think of him again, blind, in-

firm and grey-headed, groping round the Torso that he had admired when at work at his *David* seventy years before. We see his flat nose and swelling brows, his small eyes and prominent ears, his broad shoulders and neglected dress;—we remember about this very Ceiling his horror at the damp spots; his quarrel with Bramante and the poor carpenter, whose daughter he dowered with the price of the abandoned scaffold; the haste of the fiery Pope and the fear of the hurried painter. It was during this very work, when Michael Angelo asked leave of the Pope to spend a week in Florence, Julius replied, “But when will this chapel be finished?” Buonarroti replied, “When I can, Holy Father.”—“When I can! when I can!” said the Pope, striking him with his staff, “Thou shalt finish it, and that quickly.” But ere the painter had left the presence, Julius sent in haste his chamberlain after him with an atonement in the shape of 500 crowns.

Very vast is the scheme of this Sistine Ceiling. It contains the Separation of Light and Darkness, the Benediction of the Earth, and other epochs of the Genesis, the creation of Adam and Eve, the Sacrifice of Abel, the story of Noah, the Death of Goliath and Holofernes, the Brazen Serpent, and the Decree of Ahasuerus. Beside the Sibyls are the prophets Jeremiah, Ezekiel, Zechariah, Daniel. All this, thanks to Mr. Harford's love of Art, we have now epitomized in one careful and beautiful print.

FINE-ART GOSSIP. — Mr. Selous's picture of the Inauguration of the Crystal Palace in Hyde Park has been this week on view in Cornhill. It is an interesting record of one of the great events of the century, one that recorded, perhaps, the peaceful amalgamation of European nations, and a fresh epoch in the history of Commerce and Art. The portraits are very careful and accurate, rather flat as to painting, and somewhat monotonous in colour. The whole is well composed,—the well-known trees keeping up the conventional and indispensable pyramid and giving a singular relief to the bright colours of the uniforms and court-dresses. The artist has thrown variety and ease into his figures in a composition where from their number and constrained attitude even variety might appear artificial. We have here in a view all the principal public personages of the age; the leaders of rank, science and commerce, the intellectual heads of the nation. We have many faces arrested here by the painter's brush, over whom the earth has since closed. Pale and earnest, the Iron Duke watches the attentive princes; with the Marquis of Anglesea, his companion in arms, now also, like his great leader, passed away from our eyes. Not far from Wellington is the Duke of Cambridge, stout and bold, unconscious of the dangers and sufferings so soon to come. There is the Turkish Ambassador, too, ignorant of the mine over which his nation stood. From these causes a picture like this becomes an historical record, and illustrates an important page in national history. The artist's view is taken from a point near the Crystal Fountain, looking northward. Beneath the trees upon the crimson dais stands the Royal party grouped around the Queen, who listens with deep attention to the words of the prayer uttered by the Archbishop. On the left crowd the Ministers of State. Lord John Russell, conspicuously small, and behind him the Royal Commissioners and the executive officers. On the left the Foreign Commissioners, chairmen of juries, &c.; the leader of all being the Chinaman Hee Sing, with his round cap on, his thick sabots and flowered silk robes. The portraits of some visitors are omitted, Prince Henry of the Netherlands, and other foreigners of distinction left before the painting could be commenced. But as this is the only picture painted of the ceremony, every portrait has been painted from actual studies. The picture is now being engraved, and will eventually be transferred to Windsor, unless Her Majesty waives her wish to purchase for the sake of other competitors. We think, as a whole, that Mr. Selous's work deserves to rank with the ‘Waterloo Banquet,’ the ‘Coro-

nation' and other works of the portrait branch of Art.

The following letter on the recent competition at Oxford speaks for itself:—

"More than four months have now elapsed since what you were pleased to call 'an important series of designs' for the new Museum at Oxford were submitted to the scrutiny of the University Delegates: yet, for some inexplicable reason, the final decision has not yet been before the public or communicated to the competitors. The affair seems at present to stand thus:—under the direction of Mr. Hardwicke, the professional adviser, six were chosen as possessing more merit than the remainder, and these six were thereupon referred to the judgment of the aforesaid gentleman, as to whether they could be executed for the stated sum; he decided that *none* of them could be carried out for the money, but that two were more in accordance with the requirements of the University than the others; both of which it was said had guarantees from respectable builders to execute them for the stipulated sum of 30,000*l.* These designs were respectively by Mr. T. Deane and Mr. E. Barry; that by Mr. Deane was ultimately decided upon. Now, may I be allowed to suggest two simple questions: first, did the builders' guarantees have any weight with the delegacy in the choice of those two designs? if so, ought not the other competitors to have been allowed the opportunity of obtaining similar guarantees, since if the judgment of Mr. Hardwicke, who had decided that *none* could be done for the money, was set aside in *one* case it ought to have been in *all*? My design was one of the six, and was very favourably mentioned in your review of the 11th of November; now I feel sure that any one would say at a glance that if those two designs could be executed for the sum, *mine* could be for much less. Secondly, what has become of the 'prizes'—respectively, 150*l.*, 100*l.*, and 50*l.*? Do the delegacy consider themselves exonerated from distributing them on the ground of Mr. Hardwicke's decision? I think, with all deference to those gentlemen, that this would be scarcely justice. When it is considered what study and time are requisite for the production of such designs as those which were exhibited in the Radcliffe Library, it cannot be wondered at that those who, like myself, have laboured hard, and thought much, should be anxious to know the result of our efforts, and be keenly alive to the least appearance of neglect, partiality, or injustice. You will therefore be conferring a great favour upon many by directing attention to the subject, either by the insertion of this letter in your pages, or by any other means you may deem most desirable. —I am, &c.

ONE OF THE SIX.

"P.S. It has just occurred to me that the report is circulated and has probably reached your ears, that the design chosen is found to be a copy of a monastery on the Rhine.—Can the two purposes be compatible? and is such talent to be rewarded?"
